Freidlin,2012-12-06 Onishchik A A Kirillov and E B Vinberg who obtained their first results on Lie groups in Dynkin s seminar At a later stage the work of the seminar was greatly enriched by the active participation of 1 1 Pyatetskii Shapiro As already noted Dynkin started to work in probability as far back as his undergraduate studies In fact his first published paper deals with a problem arising in Markov chain theory The most significant among his earliest probabilistic results concern sufficient statistics In 15 and 17 Dynkin described all families of one dimensional probability distributions admitting non trivial sufficient statistics These papers have considerably influenced the subsequent research in this field But Dynkin s most famous results in probability concern the theory of Markov processes Following Kolmogorov Feller Doob and Ito Dynkin opened a new chapter in the theory of Markov processes He created the fundamental concept of a Markov process as a family of measures corresponding to var ious initial times and states and he defined time homogeneous processes in terms of the shift operators t In a joint paper with his student A **Stochastic Analysis and Applications** A.B. Cruzeiro,J.C. Zambrini,2012-12-06 At the end of the summer 1989 an international conference on stochastic analysis and related topics was held for the first time in Lisbon Portu gal This meeting was made possible with the help of INIC and JNICT two organizations devoted to the encouragement of scientific research in Portugal The meeting was interdiciplinary since mathematicians and mathematical physicists from around the world were invited to present their recent works involving probability theory analysis geometry and physics a wide area of cross fertilization in recent years Portuguese scientific research is expanding fast these days faster some times than the relevant academic structures The years to come will be determinant for the orientation of those young Portuguese willing to take an active part in the international scientific community Lisbon s summer 89 meeting should initiate a new Iberic tradition attrac tive both for these researchers to be and of course for the selected guests Judging by the quality of contributions collected here it is not unrealistic to believe that a

tradition of southern randomness may well be established **Stochastic Analysis and Related Topics VII** Laurent Decreusefond,Bernt Oksendal,Ali S. Üstünel,2012-12-06 One of the most challenging subjects of stochastic analysis in relation to physics is the analysis of heat kernels on infinite dimensional manifolds The simplest nontrivial case is that of thepath and loop space on a Lie group In this volume an up to date survey of the topic is given by Leonard Gross a prominent developer of the theory Another concise but complete survey of Hausdorff measures on Wiener space and its applications to Malliavin Calculus is given by D Feyel one of the most active specialists in this area Other survey articles deal with short time asymptotics of diffusion pro cesses with values in infinite dimensional manifolds and large deviations of diffusions with discontinuous drifts A thorough survey is given of stochas tic integration with respect to the fractional Brownian motion as well as Stokes formula for the Brownian sheet and a new version of the log Sobolev inequality on the Wiener space Professional mathematicians looking for an overview of the state of the art in the above subjects will find this book helpful In addition graduate students as well as researchers whose domain requires stochastic analysis will find the original results of interest for their own research The organizers acknowledge gratefully the financial help ofthe University of Oslo and the invaluable aid of Professor Bernt 0ksendal and l Ecole Nationale Superieure des Telecommunications **Stochastic Analysis and Related Topics VI** Laurent Decreusefond,1998-12-18 This volume contains the contributions of the participants of the Sixth Oslo Silivri Workshop on Stochastic Analysis held in Geilo from July 29 to August 6 1996 There are two main lectures Stochastic Differential Equations with Memory by S E A Mohammed Backward SDE s and Viscosity Solutions of Second Order Semilinear PDE s by E Pardoux The main lectures are presented at the beginning of the volume There is also a review paper at the third place about the stochastic calculus of variations on Lie groups The contributing papers vary from SPDEs to Non Kolmogorov type probabilistic models We would like to thank VISTA a research cooperation between Norwegian Academy of Sciences and Letters and Den Norske Stats Oljeselskap Statoil CNRS Centre National de la Recherche Scientifique The Department of Mathematics of the University of Oslo The Ecole Nationale Superieure des Telecommunications for their financial support L Decreusefond J Gjerde B 0ksendal A S Ustunel PARTICIPANTS TO THE 6TH WORKSHOP ON STOCHASTIC ANALYSIS Vestlia H yfjellshotell Geilo Norway July 28 August 4 1996 E mail abc gfm cii fc ui pt Aureli ALABERT Departament de Matematiques Laurent DECREUSEFOND Universitat Autonoma de Barcelona Ecole Nationale Superieure des Telecom 08193 Bellaterra munications CATALONIA Spain Departement Reseaux E mail alabert mat uab es 46 rue Barrault Halvard ARNTZEN 75634 Paris Cedex 13 Dept of Mathematics FRANCE University of Oslo E mail decreuse res enst fr Box 1053 Blindern Laurent DENIS N 0316 Oslo C M I *Stochastic Analysis and Related Topics* H. Üstünel,2012-12-06 This volume contains a large spectrum of work super processes Dirichlet forms anticipative stochastic calculus random fields and Wiener space analysis The first part of the volume consists of two main lectures given at the third Silivri meeting in 1990 1 Infinitely divisible random measures and superprocesses by D A Dawson

2 Dirichlet forms on infinite dimensional spaces and appli cations by M Rockner The second part consists of recent research papers all related to Stochastic Analysis motivated by stochastic partial differ ential equations Markov fields the Malliavin calculus and the Feynman path integrals We would herewith like to thank the ENST for its material support for the above mentioned meeting as well as for the ini tial preparation of this volume and to our friend and colleague Erhan Qmlar whose help and encouragement for the realization of this volume have been essential H Korezlioglu A S Ustiinel INFINITELY DIVISIBLE RANDOM MEASURES AND SUPERPROCESSES DONALD A DAWSON 1 Introduction *Stable Processes and Related Topics* Cambanis,2012-12-06 The Workshop on Stable Processes and Related Topics took place at Cor nell University in January 9 13 1990 under the sponsorship of the Mathemat ical Sciences Institute It attracted an international roster of probabilists from Brazil Japan Korea Poland Germany Holland and France as well as the U S This volume contains a sample of the papers presented at the Workshop All the papers have been refereed Gaussian processes have been studied extensively over the last fifty years and form the bedrock of stochastic modeling Their importance stems from the Central Limit Theorem They share a number of special properties which facilitates their analysis and makes them particularly suitable to statistical inference The many properties they share however is also the seed of their limitations What happens in the real world away from the ideal Gaussian model The non Gaussian world may contain random processes that are close to the Gaussian What are appropriate classes of nearly Gaussian models and how typical or robust is the Gaussian model amongst them Moving further away from normality what are appropriate non Gaussian models that are sufficiently different to encompass distinct behavior yet sufficiently simple to be amenable to efficient statistical inference The very Central Limit Theorem which provides the fundamental justifi cation for approximate normality points to stable and other infinitely divisible models Some of these may be close to and others very different from Gaussian models **High Dimensional Probability II** Evarist Giné,David M. Mason,Jon A. Wellner,2012-12-06 High dimensional probability in the sense that encompasses the topics rep resented in this volume began about thirty years ago with research in two related areas limit theorems for sums of independent Banach space valued random vectors and general Gaussian processes An important feature in these past research studies has been the fact that they highlighted the es sential probabilistic nature of the problems considered In part this was because by working on a general Banach space one had to discard the extra and often extraneous structure imposed by random variables taking values in a Euclidean space or by processes being indexed by sets in R or Rd Doing this led to striking advances particularly in Gaussian process theory It also led to the creation or introduction of powerful new tools such as randomization decoupling moment and exponential inequalities chaining isoperimetry and concentration of measure which apply to areas well beyond those for which they were created The general theory of em pirical processes with its vast applications in statistics the study of local times of Markov processes certain problems in harmonic analysis and the general theory of stochastic processes are just several of the broad areas in which

Gaussian process techniques and techniques from probability in Banach spaces have made a substantial impact Parallel to this work on probability in Banach spaces classical proba bility and empirical process theory were enriched by the development of powerful results in strong approximations *Probability in Banach Spaces 6* Haagerup,2012-12-06 This volume contains a selection of papers by the participants of the 6 International Conference on Probability in Banach Spaces Sand bjerg Denmark June 16 D1 1986 The conference was attended by 45 participants from several countries One thing makes this conference completely different from the previous five ones namely that it was ar ranged jointly in Probability in Banach spaces and Banach space theory with almost equal representation of scientists in the two fields Though these fields are closely related it seems that direct collaboration between researchers in the two groups has been seldom It is our feeling that the conference where the participants were together for five days taking part in lectures and intense discussions of mutual problems has contributed to a better understanding and closer collaboration in the two fields The papers in the present volume do not cover all the material pre sented in the lectures several results covered have been published else where The sponsors of the conference are The Carlsberg Foundation The Danish Natural Science Research Council The Danish Department of Education The Department of Mathematics Odense University The Department of Mathematics Aarhus University The Knudsen Foundation Odense Odense University The Research Foundation of Aarhus University The Thborg Foundation The participants and the organizers would like to thank these institu tions for their support The Organizers Contents A de Acosta and M Ledoux On the identification of the limits in the law of the iterated logarithm in Banach spaces Probability in Banach Spaces 7 Eberlein,Külbs,Marcus,2012-12-06 The first international conference on Probability in Banach Spaces was held at Oberwolfach West Germany in 1975 It brought together European researchers who under the inspiration of the Schwartz Seminar in Paris were using probabi listic methods in the study of the geometry of Banach spaces a rather small number of probabilists who were already studying classical limit laws on Banach spaces and a larger number of probabilists specialists in various aspects of the study of Gaussian processes whose results and techniques were of interest to the members of the first two groups This first conference was very fruitful It fos tered a continuing relationship among 50 to 75 probabilists and analysts working on probability on infinite dimensional spaces the geometry of Banach spaces and the use of random methods in harmonic analysis Six more international conferences were held since the 1975 meeting Two of the meetings were held at Tufts University one at S nderborg Denmark and the others at Oberwolfach This volume contains a selection of papers by the partici pants of the Seventh International Conference held at Oberwolfach West Ger many June 26 July 2 1988 This exciting and provocative conference was at tended by more than 50 mathematicians from many countries These papers demonstrate the range of interests of the conference participants In addition to the ongoing study of classical and modern limit theorems in Banach spaces a branching out has occurred among the members of this group **Topics in Probability and Lie Groups** John Christopher Taylor, This volume is comprised of two parts the first contains articles by S

N Evans F Ledrappier and Figa Talomanaca These articles arose from a Centre de Recherches de Mathematiques CRM seminar entitled Topics in Probability on Lie Groups Boundary Theory Evans gives a synthesis of his pre 1992 work on Gaussian measures on vector spaces over a local field Ledrappier uses the freegroup on d generators as a paradigm for results on the asymptotic properties of random walks and harmonic measures on the Martin boundary These articles are followed by a case study by Figa Talamanca using Gelfand pairs to study a diffusion on a compact ultrametric space The second part of the book is an appendix to the book Compactifications of Symmetric Spaces Birkhauser by Y Guivarc h and J C Taylor This appendix consists of an article by each author and presents the contents of this book in a more algebraic way L Ji and J P Anker simplifies some of their results on the asymptotics of the Green function that were used to compute Martin boundaries And Taylor gives a self contained account of Martin boundary theory for manifolds using the theory of second order strictly elliptic partial differential operators **Selected Works of Kai Lai Chung** Farid AitSahlia,2008 This unique volume presents a collection of the extensive journal publications written by Kai Lai Chung over a span of 70 odd years It was produced to celebrate his 90th birthday The selection is only a subset of the many contributions that he made throughout his prolific career Another volume Chance and Choice published by World Scientific in 2004 contains yet another subset with four articles in common with this volume Kai Lai Chung s research contributions have had a major influence on several areas in probability Among his most significant works are those related to sums of independent random variables Markov chains time reversal of Markov processes probabilistic potential theory Brownian excursions and gauge theorems for the SchrAdinger equation As Kai Lai Chung s contributions spawned critical new developments this volume also contains retrospective and perspective views provided by collaborators and other authors who themselves advanced the areas of probability and mathematics *Stochastic Processes, Physics And Geometry* Sergio Albeverio,Giulio Casati,D Merlini,R Moresi,G Cattaneo,1990-10-15
