Senile Dementia A Biomedical Approach:

Senile Dementia, a Biomedical Approach Kalidas Nandy, 1978 *Senile Dementia* Kalidas Nandy, 1978 *Senile Dementia*, 1978 *Senile Dementia* Kalidas Nandy, 1978 Self, Senility, and Alzheimer's Disease in Modern America Jesse F. Ballenger, 2006-03-31 Historian Jesse F Ballenger traces the emergence of senility as a cultural category from the late nineteenth century to the 1980s a period in which Alzheimer's disease became increasingly associated with the terrifying prospect of losing one's self Changes in American society and culture have complicated the notion of selfhood Ballenger finds No longer an ascribed status selfhood must be carefully and willfully constructed Thus losing one's ability to sustain a coherent self narrative is considered one of life's most dreadful losses As Ballenger writes senility haunts the landscape of the self made man Stereotypes of senility and Alzheimer's disease are related to anxiety about the coherence stability and agency of the self stereotypes that are transforming perceptions of old age in modern America Drawing on scientific clinical policy and popular discourses on aging and dementia Ballenger explores early twentieth century concepts of aging and the emergence of gerontology to understand and distinguish normal aging from disease In addition he examines American psychiatry's approaches to the treatment of senility and scientific attempts to understand the brain pathology of dementia Ballenger's work contributes to our understanding of the emergence and significance of dementia as a major health issue

Materialities of Age and Ageing: Concepts of a Material Gerontology Grit Höppner, Monika Urban, 2019-06-18 In gerontological research the understanding of age and ageing changed in the last decade Biologic determined explanations no longer prevail in this research field Instead ideas of social constructivism are frequently used These ideas define the state of age and the process of ageing as social constructions steeping ageing in social and cultural assumptions ascriptions and expectations From a social constructivist perspective age and ageing are not just identified as dependency deficit and need for care as it was foremost accelerated from a biological perspective but with the life course and thus with individual lifestyles experiences attitudes and practices as well as institutional and economic structures A prominent social constructivist concept is doing age Similar to doing gender the concept of doing age assumes age as taking place in the form of a social praxis within everyday life interactions between people and thus in performances embedded in discourses through which social hierarchies and ideals proceed Despite the paradigm shift that social constructivist concepts enable in gerontological thinking they reveal their blind spot when it comes to the materiality of ageing and thus to fleshy sensual experiences human and non human ontologies and agencies Addressing these materialities of ageing brings up its own critique on definitions of ageing bodies and material environments This framing does not presume that age and ageing are solely products of human to human interactions or those of formative environments or of discourses Rather humans non humans and discourses become essential parts of ageing processes Such a material framing enables us new insights into forms of age and ageing and thus offers an opportunity for scholars to engage critically with materialities of age and ageing
