Artificial Receptors for Chemical Sensors Vladimir M. Mirsky, Anatoly Yatsimirsky, 2010-12-20 The first to provide systematically organized information on all three important aspects of artificial receptor design this book brings together knowledge on an exceptionally hot and multidisciplinary field of research Strong emphasis is placed on the methodology for discovering artificial receptors with both definitions for chemosensitivity as well as experimental setups supplied There follows coverage of numerous classes of artificial receptors including synthesis immobilization on surfaces and quantitative data on properties The third part of the book focuses on receptor arrays for artificial nose and tongue applications and the whole is rounded off with an outlook and an appendix with all relevant quantitative data on artificial receptors **Force Sensors for Microelectronic Packaging Applications** Jürg Schwizer, Michael Mayer, Oliver Brand, 2005-12-11 Intended for wire bonding and flip chip packaging professionals and for scientists and engineers working in the field of mechanical microsensors this practical monograph introduces novel measurement technologies that allow for in situ and real time examination of physical processes during the packaging process or during subsequent reliability tests The measurement system presented here makes possible measurements at formerly inaccessible packaging interconnects For the first time it becomes possible to describe the wire bonding process window in terms of the physical forces at the contact zone instead of the applied machine settings This is significant for a deeper understanding and future development of these packaging processes Applications of the sensor in the field of wire bonding and flip chip characterization are also illustrated The reader will gain much insight into the important field of interconnection technology in semiconductor packaging **Sensors, Update 12** Henry Baltes, Gary K.
