Code Biology Marcello Barbieri, 2015-02-02 This book is the study of all codes of life with the standard methods of science The genetic code and the codes of culture have been known for a long time and represent the historical foundation of this book What is really new in this field is the study of all codes that came after the genetic code and before the codes of culture The existence of these organic codes however is not only a major experimental fact It is one of those facts that have extraordinary theoretical implications The first is that most events of macroevolution were associated with the origin of new organic codes and this gives us a completely new reconstruction of the history of life The second implication is that codes involve meaning and we need therefore to introduce in biology not only the concept of information but also the concept of biological meaning The third theoretical implication comes from the fact that the organic codes have been highly conserved in evolution which means that they are the greatest invariants of life The study of the organic codes in short is bringing to light new mechanisms that have operated in the history of life and new fundamental concepts in biology

Ideologies of the Real in Title Sequences, Motion Graphics and Cinema Michael Betancourt, 2019-08-13 This book explores the question of realism in motion pictures. Specifically, it explores how understanding the role of realism in the history of title sequences in film can illuminate discussions raised by the advent of digital cinema. *Ideologies of the Real in Title Sequences, Motion Graphics and Cinema* fills a critical and theoretical void in the existing literature on motion graphics. Developed from careful analysis of Andr  Bazin, Stanley Cavell, and Giles Deleuze's approaches to cinematic realism, this analysis uses title sequences to engage the interface between narrative and non-narrative media to consider cinematic realism in depth through highly detailed close readings of the title sequences for *Bullitt* (1968), *Kolchak: The Night Stalker* (1974), *The Number 23* (2007), *The Kingdom* (2008), *Blade Runner 2049* (2017), and the James Bond films. From this critique, author Michael Betancourt develops a modal approach to cinematic realism where ontology is irrelevant to indexicality. His analysis shows the continuity between historical analogue film and contemporary digital motion pictures by developing a framework for rethinking how realism shapes interpretation.
