

Series Solutions to Differential Equations

Use a Taylor series expansion to find the series solution, up to the term in $(x - 1)^3$, of the differential equation

$$\frac{d^2y}{dx^2} = x^2e^x + y^2$$

given that $\frac{dy}{dx} = e$ and $y = 1$ when $x = 1$.

Explain why this series expansion does not give a valid estimate for the value of y when $x = e$

Series Differential Equations Complex:

Complex Analysis and Differential Equations Luis Barreira, Claudia Valls, 2012-04-23 This text provides an accessible self contained and rigorous introduction to complex analysis and differential equations Topics covered include holomorphic functions Fourier series ordinary and partial differential equations The text is divided into two parts part one focuses on complex analysis and part two on differential equations Each part can be read independently so in essence this text offers two books in one In the second part of the book some emphasis is given to the application of complex analysis to differential equations Half of the book consists of approximately 200 worked out problems carefully prepared for each part of theory plus 200 exercises of variable levels of difficulty Tailored to any course giving the first introduction to complex analysis or differential equations this text assumes only a basic knowledge of linear algebra and differential and integral calculus Moreover the large number of examples worked out problems and exercises makes this the ideal book for independent study

Ordinary Differential Equations in the Complex Domain Einar Hille, 1997-01-01 Graduate level text offers full treatments of existence theorems representation of solutions by series theory of majorants dominants and minorants questions of growth much more Includes 675 exercises Bibliography
