The Psychology of Nutrition David Booth,2016-05-06 This title explores the psychological processes involved in the selection and consumption of foods and drink The exposition is firmly linked to research evidence on the cognitive socio economic and physiological influences on the desire to eat and drink The basic theory is that appetite is a learned response to a recognized complex of cues from foods the body and the social and physical environment The volume starts with infant care giver interactions in feeding then moves on to consider how physical and social maturation in Western culture affects attitudes to foods concentrating on the phenomena of ordinary dieting and the extremes of disordered eating The concluding chapters deal with the process within the lives of individual consumers which causes the same eating habits to form in different segments of society It also looks at food technology marketing and governmental regulation The Psychology of Nutrition tackles questions about what goes on in eaters and drinkers minds about the foods and beverages they are consuming and about the cultural meaning of the eating occasion in industrialized cultures **The Psychobiology of Bulimia Nervosa** Karl M. Pirke,W. Vandereycken,Detlev Ploog,2012-12-06 Research and Treatment in the Psychobiology of Bulimia Nervosa 1/2 K M Pirke and W Vandereycken When we were preparing this book the main

purpose was to gather the latest in sights from both basic and clinical research in bulimic disorders The burgeoning scientific interest in eating disorders forced us to restrict the focus in such a way that attention was only paid to psychobiological aspects of disturbed nutrition and behavior This implied that other important aspects like sociocultural and familial factors had to be excluded But it turned out that even with such a restricted scope the subject was not an easy one A review of the contributions to this volume clearly shows that our present understanding of bulimia nervosa is still very small Reviewing the hypothalamic and especially neuroendocrine regulation of nutrient balance Bray has emphasized the importance of the autonomic nervous system in regulating food intake and energy expenditure The role of insulin adrenal steroids gonadal steroids and growth hormone in modulating nutrient intake and storage were discussed The studies by Jimerson et al Schweiger et al and Fichter et al show that all these factors are altered in bulimic patients indicating that the whole system of regulating food intake and storage is severely disturbed in bulimia nervosa Evidence has been presented that neurotransmitter alterations may occur in bulimia Jimerson et al
