Longing For The Harmonies:

Longing for the Harmonies Themes and Variations From Modern Physics Frank Wilczek, Betsy Devine, 1989-05-02
Occasionally there comes along a popular science book that both scientists and non scientist can read with pleasure and profit and this is one. The New Yorker Devoted to sharing their own delight and awe before the fundamental mysteries of the cosmos Frank Wilczek winner of the 2004 Nobel Prize in Physics and science writer Betsy Devine also have a serious purpose to reveal to the lay reader how a heightened perception can respond to timeless themes of the physical universe. For example they show that even the most exotic theories always confirm that physical laws are precisely the same throughout the universe and they explain how we have learned that the most massive molten stars and the tiniest frozen particles are in physical harmony. In their descriptions of the workings of the half known universe Wilczek and Devine bring all of us face to face with the beauty of eternal order and the inevitability of rational ends and beginnings.

World in Process John A. Jungerman, 2000-11-02 Shows how modern physics supports basic claims of process philosophy.

The Infinity Puzzle Frank Close, 2011-11-29 Speculation is rife that by 2012 the elusive Higgs boson will be found at the Large Hadron Collider. If found the Higgs boson would help explain why everything has mass. But there's more at stake what we're really testing is our capacity to make the universe reasonable. Our best understanding of physics is predicated on something known as quantum field theory. Unfortunately in its raw form it doesn't make sense its outputs are physically impossible infinite percentages when they should be something simpler like the number 1. The kind of physics that the Higgs boson represents seeks to renormalize field theory forcing equations to provide answers that match what we see in the real world. The Infinity Puzzle is the story of a wild idea on the road to acceptance. Only Close can tell it.

Fantastic Realities Frank Wilczek, Betsy Devine, 2006 The fantastic reality that is modern physics is open for your exploration guided by one of its primary architects and interpreters Nobel Prize winner Frank Wilczek. Some jokes some poems and extracts from wife Betsy Devine's sparkling chronicle of what it's like to live through a Nobel Prize provide easy entertainment. There's also some history some philosophy some exposition of frontier science and some frontier science for your lasting edification. 49 pieces including many from Wilczek's award winning Reference Frame columns in Physics Today and some never before published are gathered by style and subject into a dozen chapters each with a revealing witty introduction. Profound ideas presented with style. What could be better. Enjoy.
