Vernon Gayle,Paul Lambert (Lecturer),2017 Across the social sciences there is widespread agreement that quantitative longitudinal research designs offer analysts powerful scientific data resources But to date most texts on social survey analysis have been written from a statistical rather than a social science data analysis perspective and they lack adequate coverage of common practical challenges This book aims to provide a practical and up to date introduction to influential approaches to quantitative longitudinal data analysis in the social sciences The book will discuss definitions and terms explain the relative attractions of such a design and enumerate in an accessible way the main techniques of analysis explaining their requirements statistical properties and their substantive contribution

The book is designed for postgraduates and researchers across the social sciences considering the use of quantitative longitudinal data resources in their research. It will also be an excellent text for undergraduate and postgraduate courses on advanced quantitative methods. Bloomsbury Publishing

Longitudinal Data Analysis for the Behavioral Sciences Using R Jeffrey D. Long, 2011-10-31 This book is unique in its focus on showing students in the behavioral sciences how to analyze longitudinal data using R software. The book focuses on application making it practical and accessible to students in psychology education and related fields who have a basic foundation in statistics. It provides explicit instructions in R computer programming throughout the book showing students exactly how a specific analysis is carried out and how output is interpreted.

Longitudinal Categorical Data Analysis Brajendra C. Sutradhar, 2014-10-30 This is the first book in longitudinal categorical data analysis with parametric correlation models developed based on dynamic relationships among repeated categorical responses. This book is a natural generalization of the longitudinal binary data analysis to the multinomial data setup with more than two categories. Thus unlike the existing books on cross sectional categorical data analysis using log linear models, this book uses multinomial probability models both in cross sectional and longitudinal setups. A theoretical foundation is provided for the analysis of univariate multinomial responses by developing models systematically for the cases with no covariates as well as categorical covariates both in cross sectional and longitudinal setups. In the longitudinal setup both stationary and non stationary covariates are considered. These models have also been extended to the bivariate multinomial setup along with suitable covariates. For the inferences the book uses the generalized quasi likelihood as well as the exact likelihood approaches. The book is technically rigorous and it also presents illustrations of the statistical analysis of various real life data involving univariate multinomial responses both in cross sectional and longitudinal setups. This book is written mainly for the graduate students and researchers in statistics and social sciences among other applied statistics research areas. However the rest of the book specifically the chapters from 1 to 3 may also be used for a senior undergraduate course in statistics.

Longitudinal Data Analysis Ikuko Funatogawa, Takashi Funatogawa, 2019-02-04 This book provides a new analytical approach for dynamic data repeatedly measured from multiple subjects over time. Random effects account for differences across subjects. Auto regression in response itself is often used in time series analysis. In longitudinal data analysis a static mixed effects model is changed into a dynamic one by the introduction of the auto regression term. Response levels in this model gradually move toward an asymptote or equilibrium which depends on covariates and random effects. The book provides relationships of the autoregressive linear mixed effects models with linear mixed effects models, marginal models, transition models, nonlinear mixed effects models, growth curves, differential equations and state space representation. State space representation with a modified Kalman filter provides log likelihoods for maximum likelihood estimation and this representation is suitable for unequally spaced longitudinal data. The extension to multivariate longitudinal data analysis is also provided. Topics in medical fields such as response dependent dose

modifications response dependent dropouts and randomized controlled trials are discussed The text is written in plain terms understandable for researchers in other disciplines such as econometrics sociology and ecology for the progress of interdisciplinary research
