J. de Wit, 2015-01-02 This book summarizes the geomorphology geology geochronology geophysics and mineral resources of the Congo Basin one of the world s most enigmatic and poorly understood major intra continental sedimentary basins and its flanking areas of Central Africa It provides an up to date analysis of the large region s origin and evolution The book s nineteen chapters take the reader through the entire basement history as well as the Basin s ca 700 million years of cover sequences Starting from its Archean cratons and Proterozoic mobile belts and proceeding through the Phanerozoic sequences including the most recent Cenozoic successions the book also explores the present drainage systems and the subtle but complex topography of the Congo Basin It also presents and evaluates new basin models and related dynamic processes as well as revised correlation schemes with its Gondwana counterparts in South America all of which provide key insights into its rich diamond deposits and other mineral wealth which are documented in the final chapters A specific feature of this book is its synthesis performed by teams of active experts of a vast amount of geoscientific data previously only recorded in research reports company reports survey bulletins and scattered journal articles and books The sheer size of the Congo Basin ca 1 8 million km² or just under half the area of the EU and Central Africa some 7 million km² or more than 70% of the area of the USA will make this a sought after source of information and inspiration on this unique region

Parsons, A. D. Abrahams, 2009-03-20 About one third of the Earth s land surface experiences a desert climate and this area supports approximately 15% of the planet s population This percentage continues to grow and with this growth comes the need to acquire and apply an understanding of desert geomorphology Such an understanding is vital in managing scarce and fragile resources and in mitigating natural hazards This authoritative reference book is comprehensive in its coverage of the geomorphology of desert environments and is arranged thematically It begins with an overview of global deserts proceeds through treatments of weathering hillslopes

rivers piedmonts lake basins and aeolian surfaces and concludes with a discussion of the role of climatic change Written by a team of international authors all of whom are active in the field the chapters cover the spectrum of desert geomorphology
