Margins Of Reality The Role Of Consciousness In The Physical World:

Margins of Reality Robert G. Jahn, Brenda J. Dunne, 2009-04 WHAT HAS MODERN SCIENCE SWEEPED UNDER THE RUG This pioneering work which sparked intense controversy when it was first published two decades ago suggests that modern science in the name of rigor and objectivity has arbitrarily excluded the role of consciousness in the establishment of physical reality Drawing on the results of their first decade of empirical experimentation and theoretical modeling in their Princeton Engineering Anomalies Research PEAR program the authors reach provocative conclusions about the interaction of human consciousness with physical devices information gathering processes and technological systems The scientific personal and social implications of this revolutionary work are staggering MARGINS OF REALITY is nothing less than a fundamental reevaluation of how the world really works Consciousness and the Source of Reality Robert G. Jahn, Brenda J. Dunne, 2011 When Robert G Jahn and Brenda J Dunne first embarked on their exotic scholarly journey more than three decades ago their aspirations were little higher than to attempt replication of some previously asserted anomalous results that might conceivably impact future engineering practice either negatively or positively and to pursue those ramifications to some appropriate extent But as they followed that tortuous research path deeper into its metaphysical forest it became clear that far more fundamental epistemological issues were at stake and far stranger phenomenological creatures were on the prowl than they had originally envisaged and that a substantially broader range of intellectual and cultural perspectives would be required to pursue that trek productively This text is their attempt to record some of the tactics developed experiences encountered and understanding acquired on this mist shrouded exploration in the hope that their preservation in this format will encourage and enable deeper future scholarly penetrations into the ultimate Source of Reality **The Nature of Consciousness, the Structure of Reality** Jerry Davidson Wheatley, 2001 This book describes how understanding the structure of reality leads to the Theory of Everything Equation The equation unifies the forces of nature and enables the merging of relativity with quantum theory The book explains the big bang theory and everything else Gothic Metaphysics Jodey Castricano, 2021-11-15 We live in the time of the Anthropocene which calls for a paradigm shift in our relation to this planet One of the themes of this book is to call attention to the shift This book is a challenge to Literary Gothic and Cultural Studies The case for rethinking approaches to gothic fiction is built on an extended critique of Freudian assumptions and antinomies of the occult associated with mechanism materialism and classical physics a critique informed by Jung and an engaging re evaluation of mystical animist and alchemical modes of thought linked to quantum physics new materialism along with curiously but effectively Derridean deconstruction and cryptonymy Readers will benefit from the depth and breadth of the research in this book that draws upon philosophical anthropological psychoanalytic and scientific thought to engage with a literary genre in a way that changes how we think about Gothic Studies *The World of Shamanism* Roger Walsh, 2025-08-05 Fascinating comprehensive and eminently readable this guide explores shamanism the world's most

enduring healing and religious tradition in the light of modern medicine psychology neuroscience consciousness disciplines and religious studies Praise As if on cue just when I am beginning to think that shamanism is the ground from which all religions spring along comes this book I cannot imagine a book that would be more helpful to me in thinking through this important subject Huston Smith author of *The World's Religions* Unquestionably the most rounded compact introduction to shamanism particularly the inner world of shamans available today A door opening book for students of consciousness and spirituality Georg Feuerstein PhD M Litt author of *The Yoga Tradition* A splendidly clear and timely survey of shamanism Jean Achterberg PhD author of *Imagery in Healing* Quite simply this book is a major step forward in understanding the vital phenomenon of shamanism I recommend it highly Charles Tart PhD Professor Emeritus of Psychology University of California at Davis author of *States of Consciousness* Eminently useful and inspiring A brilliant integrative work that pushes the frontiers of consciousness in insightful practical and powerful ways Angeles Arrien PhD Cultural Anthropologist author of *The Four Fold Way* and *The Second Half of Life* Unique in bringing together the full range of anthropological psychological and psychiatric literature on this vital subject It does so with admirable scholarship yet still manages to be sensitive and clear Christie W Kiefer PhD Professor Emeritus of Anthropology University of California at San Francisco

The Nature of Order, Book Four: The Luminous Ground Christopher Alexander, 2020-03-30 Christopher Alexander's series of ground breaking books including *A Pattern Language* and *The Timeless Way of Building* have pointed to fundamental truths of the way we build revealing what gives life and beauty and true functionality to our buildings and towns Now in *The Nature of Order* Alexander explores the properties of life itself highlighting a set of well defined structures present in all order and in all life from micro organisms and mountain ranges to good houses and vibrant communities The foundations of modern scientific thought are firmly rooted in a conception that the universe is a machinelike entity a play of baubles machines trinkets To this day our real daily experience of ourselves has no clear place in science It is little wonder that a machine like worldview has supported the deadly architecture of the last century This mechanistic thinking and the consequent investment oriented tracts of houses condominiums and offices have dehumanized our cities and our lives How are spirit soul emotion feeling to be introduced into a building or a street or a development project in modern times *The Luminous Ground* the fourth book of *The Nature of Order* contains what is perhaps the deepest revelation in the four volume work Here is a geometrical view of space and matter seamlessly connected to our own private personal experience as sentient and knowing creatures This is not merely an emotional appendix to the scientific theory of the other books It is at the core of the entire work and is rooted in the fact that our two sides our analytical thinking selves and our vulnerable emotional personalities as human beings are coterminous They must be harnessed at one and the same time if we are ever to really make sense of what is around us and be able to create a living world Alexander breaks away completely from the one sided mechanical model of buildings or neighbourhoods as mere assemblages of technically generated interchangeable parts He shows us conclusively

that a spiritual emotional and personal basis must underlie every act of building His buildings and works of art demonstrate in detail what he means And then in the middle of the book comes the linchpin of the work a one hundred page chapter on colour which lavishly illustrates and dramatically conveys the way that consciousness and spirit can make their appearance in the world Altogether present throughout this fourth and final book is a new cosmology uniting matter and consciousness consciousness inextricably joined to the substrate of matter present in all matter and providing all wholeness with its material cognitive and spiritual underpinnings This view though radical conforms to our most ordinary daily intuitions It may provide a path for those contemporary scientists who are beginning to see consciousness as the underpinning of all matter and thus as a proper object of scientific study Taken as a whole the four books create a sweeping new conception of the nature of things which is both objective and structural hence part of science and also personal in that it shows how and why things have the power to touch the human heart A step has been taken through which these two domains the domain of geometrical structure and the feeling it creates kept separate during four centuries of scientific thought from 1600 to 2000 have finally been united The Nature of Order constitutes the backbone of Building Beauty Ecologic Design Construction Process an initiative aimed at radically reforming architecture education with the emphasis of making as a way to access a transformative vision of the world The 15 fundamental properties of life guide our work and have given us much more than a set of solutions The Nature of Order has given us the framework in which we can search and build up our own solutions In order to be authentically sustainable buildings and places have to be cared for and loved over generations Beautiful buildings and places are more likely to be loved and they become more beautiful and loved through the attention given to them over time Beauty is therefore not a luxury or an option it includes and transcends technological innovation and is a necessary requirement for a truly sustainable culture

Molecular Memories Robert G. Jahn and Brenda J. Dunne, 2016-03-11 In 1979 Bob Jahn and Brenda Dunne two individuals with vastly different backgrounds experiences and styles and who had little in common beyond a shared vision joined forces to create the unique scholarly enterprise that became the PEAR laboratory at Princeton University's Engineering School Over the next 28 years their molecular bond with its associated complementarity provided the foundation for a remarkable personal friendship and creative professional partnership Just as it is only in the interaction of the constituent atoms in a physical molecule that the characteristics of the unified system become apparent this book attempts to capture the magic and the humor of that dynamic bond through an assortment of vignettes that illustrate their shared voyage of discovery

Remapping Reality John Aloysius McCarthy, 2006 This book is about intersections among science philosophy and literature It bridges the gap between the traditional cultures of science and the humanities by constituting an area of interaction that some have called a third culture By asking questions about three disciplines rather than about just two as is customary in research this inquiry breaks new ground and resists easy categorization It seeks to answer the following questions What impact has the remapping of reality in scientific terms since the Copernican Revolution through thermodynamics relativity theory and quantum mechanics had on the way writers and thinkers conceptualized the place of human culture within the total economy of existence What influence on the other hand have writers and philosophers had on the doing of science and on scientific paradigms of the

world Thirdly where does humankind fit into the total picture with its uniquely moral nature In other words rather than privileging one discipline over another this study seeks to uncover a common ground for science ethics and literary creativity Throughout this inquiry certain nodal points emerge to bond the argument cogently together and create new meaning These anchor points are the notion of movement inherent in all forms of existence the changing concepts of evil in the altered spaces of reality and the creative impulse critical to the literary work of art as well as to the expanding universe This ambitious undertaking is unified through its use of phenomena typical of chaos and complexity theory as so many leitmotifs While they first emerged to explain natural phenomena at the quantum and cosmic levels chaos and complexity are equally apt for explaining moral and aesthetic events Hence the title Remapping Reality extends to the reconfigurations of the three main spheres of human interaction the physical the ethical and the aesthetic or creative

The Reality of ESP Russell Targ, 2012-12-19 On February 4 1974 members of the Symbionese Liberation Army kidnapped nineteen year old newspaper heiress Patricia Hearst from her Berkeley California apartment Desperate to find her the police called physicist Russell Targ and Pat Price a psychic retired police commissioner As Price turned the pages of the police mug book filled with hundreds of photos suddenly he pointed to one of them and announced That's the ringleader The man was Donald DeFreeze who was indeed subsequently so identified Price also described the type and location of the kidnap car enabling the police to find it within minutes That remarkable event is one reason Targ believes in ESP Another occurred when his group made 120 000 by forecasting for nine weeks in a row the changes in the silver commodity futures market As a scientist Targ demands proof His experience is based on two decades of investigations at the Stanford Research Institute SRI which he cofounded with physicist Harold Puthoff in 1972 This twenty million dollar program launched during the Cold War was supported by the CIA NASA the Defense Intelligence Agency and Army and Air Force Intelligence The experiments they conducted routinely presented results could have happened by chance less than once in a million Targ describes four types of experiments Remote Viewing in which a person describes places and events independent of space and time For example while in California Price drew to scale a Soviet weapons factory at Semipalitinsk with great accuracy later confirmed by Satellite photography In another remote viewing Targ accurately sketched an airport in San Andreas Columbia himself Distant Mental Influence where the thoughts of the experimenter can positively or negatively affect the physiology heart rate skin resistance etc of a distant person Whole field isolation where someone in a state of sensory isolation accurately describes the visual experiences of someone else in another place Precognition and retrocausality showing that the future

can affect the past That is the elephant you see on television in the morning can be the cause of your having dreamed about elephants the previous night Final chapters present evidence for survival after death explain how ESP works based on the Buddhist Hindu view of our selves as nonlocal eternal awareness discuss the ethics of exercising psychic abilities and show us how to explore ESP ourselves I am convinced Targ says that most people can learn to move from their ordinary mind to one not obstructed by conventional barriers of space and time Who would not want to try that **The Science of**

Near-Death Experiences John C. Hagan, 2017-01-30 What happens to consciousness during the act of dying The most compelling answers come from people who almost die and later recall events that occurred while lifesaving resuscitation emergency care or surgery was performed These events are now called near death experiences NDEs As medical and surgical skills improve innovative procedures can bring back patients who have traveled farther on the path to death than at any other time in history Physicians and healthcare professionals must learn how to appropriately treat patients who report an NDE It is estimated that more than 10 million people in the United States have experienced an NDE Hagan and the contributors to this volume engage in evidence based research on near death experiences and include physicians who themselves have undergone a near death experience This book establishes a new paradigm for NDEs SYNTROPY Ulisse Di Corpo, Antonella Vannini, 2015-01-23 Most of us are familiar with the concept of entropy the dissipative process that indicates the degree of disorder or uncertainty in a closed physical system Entropy is unidirectional and always proceeds forward in time but it fails to account for many scientific paradoxes such as life itself Less well known is its complementary principle syntropy the subject of this book Syntropy produces a continuous increase in complexity through the action of attractors that emanate from the future and provides systems with their purpose and design Rather than generating disorder via increasing differentiation syntropy draws individuals and systems together by their common characteristics and goals In a way syntropy can be regarded as the life force that emanates from the unifying action of love
