## **An Identification Guide to the Larval**

**Marine Invertebrates of the Pacific Northwest** Alan L. Shanks, 2001 The study of larval invertebrates is a vital and growing field in contemporary marine science The key ecological role of larvae in determining adult population sizes has been recognized for decades and has inspired extensive research This volume the first of its kind is an identification guide to the planktonic larvae of shallow subtidal and intertidal invertebrates common to the Pacific Northwest coast Each chapter provides a brief background to the larval biology of an invertebrate group keys drawings and descriptions for the identification of larvae a list of the species present in the Pacific Northwest and a reference section The geographic range covered is roughly from southeast Alaska to northern California however many of the species are found along the entire coast of California as far south as Baja California An essential reference for anyone attempting to identify larval invertebrates from zooplankton samples this working manual is intended for students as well as scientists and researchers It offers an important new resource for marine biologists biological oceanographers marine and intertidal ecologists and especially larval biologists

**Checklist of the Marine Macroinvertebrates of Alaska** David Thomas Drumm, Katherine P. Maslenikov, Robert Van Syoc, James Wilder Orr, Robert Russell Lauth, Duane E. Stevenson, Theodore W. Pietsch, 2016 A current and comprehensive species list of marine invertebrates of Alaska is essential for effective management of living marine resources sustainable fisheries conservation of vulnerable ecosystems and advancement of our knowledge of biodiversity and ecosystem function Furthermore the most current checklist available to resource managers and scientists is quite dated and limited in that it

only includes the marine invertebrates of the southern coast of Alaska to California Since that checklist was published many new species have been described many range extensions have been discovered and considerable changes in higher level systematics have been made The checklist that we have compiled lists 3708 species and presents for each species the currently accepted scientific name and its significant synonyms common names type localities geographic and depth distributions a general statement of abundance in Alaska when known e g rare uncommon common abundant and general remarks It includes species recorded in the marine waters of Alaska from the intertidal zone continental shelf and upper continental slope to abyssal depths from the Beaufort Sea at the Arctic border with Yukon Canada the eastern Chukchi Sea the eastern Bering Sea the Aleutian Islands to the western border with Russia and the Gulf of Alaska to Dixon Entrance at the southern border with British Columbia Sound and reliable taxonomic identifications are necessary to monitor and predict changes in the distribution and abundance of marine species The current status and future direction of the study of Alaskan marine invertebrate biodiversity are briefly discussed
