**The South China Sea** C. J. Jenner,Tran Truong Thuy,2016-09-01 The history of the South China Sea is a catalyst of international cooperation and conflict Security in the Indo Asia Pacific is largely governed by command of these strategic waters More than half of global shipping transits the South China Sea which also holds significant reserves of oil gas and minerals as well as some of the largest fisheries in the world Drawing on a team of field leading researchers Jenner and Thuy provide an empirical study of the global ocean s most contested sea space The volume s four parts offer an insightful analysis of the significance of the South China Sea to the international order sub national agents of influence on relations between states the disputes over sovereignty through the analytical prism of international law and the conflictful region s prospects The primary source based conclusion elucidates the agency of history and strategy in the South China Sea

**Petroleum Geology of the Black Sea** M.D. Simmons,G.C. Tari,A.I. Okay,2018-08-14 The Black Sea remains one of the largest underexplored rift basins in the world Future success is dependent on a better understanding of a number of geological uncertainties These include reservoir and source rock presence and quality and the timing of migration of hydrocarbons relative to trap formation An appreciation of the geological history of the Black Sea basins and the surrounding orogens is therefore key The timing of basin formation uplift of the margins and of facies distribution remain issues for robust debate This Special Publication presents the results of 15 studies that relate to the tectono stratigraphy and petroleum geology of the Black Sea The methodologies of these studies encompass crustal structure geodynamic evolution stratigraphy and its regional correlation petroleum systems source to sink hydrocarbon habitat and play concepts and reviews of past exploration They provide insight into the many ongoing controversies concerning Black Sea regional geology and provide a better understanding of the geological risks that must be considered for future hydrocarbon exploration

**Blue Foods Security and Sustainability** Ruijie Zhang,Jingzhen Wang,Tangtian He ,Andrea Belgrano,2024-10-09 Blue foods aquatic foods captured or farmed in marine and freshwater systems play a key role in feeding and nourishing the world by providing highly accessible and affordable sources of protein and micronutrients for over 3.2 billion people and supporting the jobs of 58.5 million people and the livelihoods of 600 million people In the past 71 year period blue foods have significantly expanded from 19.9 million tons in 1950 to 214 million tons in 2020 Yet with 811 million people suffering from hunger and 3 billion people unable to afford a healthy diet blue food production is poised to continue to expand in the future However the expansion of aquaculture and fisheries has also raised a series of ecological and environmental issues such as biodiversity loss environmental pollution plastic pollution antibiotic pollution nitrogen and phosphorus emissions etc land and freshwater use overfishing habitat degradation etc In parallel the continuously growing demand for blue food has been challenged by unprecedented environmental changes such as climate change ocean acidification water pollution microplastics antibiotics persistent pollutants etc But compared to other animal sourced foods blue food can remain an imperative component of sustainable food system solutions by reducing the environmental footprint and relieving pressure on overburdened terrestrial systems Therefore it is important to understand the challenges and priorities of the blue food transformation in order to jointly promote food safety and environmental sustainability

**Monsoon Evolution and Tectonics** Peter D. Clift,Ryūji Tada,Hongbo Zheng,2010 The Earth's climate varies through geological time as a result of external orbital processes as well as the positions of continents growth of mountains and the opening and closure of oceanic gateways Climate modelling suggests that the intensity of the Asian monsoon should correlate at least in part with the uplift history of the Tibetan Plateau and the Himalaya as well as the evolution of gateways and the retreat of shallow seas in Central Asia Long term reconstructions of both mountain building and monsoon activity are key to testing the proposed links This collection of papers presents a series of new studies documenting the variations of the Asian monsoon on orbital and tectonic timescales together with the impact this has had on environmental conditions The issue of which proxies are best suited to measuring monsoons is addressed as is the effect that the monsoon has had on erosion and the formation of the stratigraphic record both on and offshore
