Marine Protected Areas:

Marine Protected Areas Susan Gubbay, 1995-07-31 Marine protected areas MPAs have an important role in marine conservation programmes around the world. Although most have been established relatively recently when compared with protected areas on land, there is considerable expertise on their identification, setting up and management. Some techniques have been adapted from those used on land. Others are novel and unique to marine conservation. The chapters in this book give an insight into this fast developing field where experiment and innovation work alongside techniques which have been tried and tested. The guiding principles behind key stages in the setting up and management of MPAs are described and case studies illustrate how they have worked. While it is most encouraging to read about the successes, the case studies also point to difficulties which have been encountered. Not all of the examples are new or recent but together they illustrate what is happening in this field.

Marine Protected Areas: An Overview Harold Frank Upton, 2007 Securitizing Marine Protected Areas Elizabeth M. De Santo, 2024-07-10 This book presents a novel examination of Marine Protected Areas within a security context, bridging science policy and geopolitics and addressing the often under-emphasized aspect of environmental justice. The book argues that Marine Protected Areas MPAs are not only a critical tool for protecting marine biodiversity in a changing climate but they also play an important role at the intersection of geopolitics and environmental justice and they provide a case study of environmental governance at the science policy interface. The book takes an interdisciplinary and critical approach and builds on the author's two decades of experience working in this field. Geopolitically, it explores the ways in which MPAs provide footprints for influence and access to resources far from home for nations with overseas territories. MPAs also raise important issues connected to equity, environmental justice and social justice, including access to resources and participation in environmental decision-making processes, key aspects for achieving long-term conservation goals. The book also demonstrates how MPAs are a critical lens for understanding how policy makers cope with scientific uncertainty and the necessity of well-designed and precautionary science advisory processes. While the ecological contribution of MPAs is paramount, social issues and geopolitical considerations are often less obvious in the discourse underpinning MPAs and the resulting tensions can undermine long-term conservation objectives. By applying the three lenses of geopolitics, environmental justice and science, this book provides key insights to help the international community moving past the 2030 biodiversity targets and beyond towards a future of meaningful, equitable and effective conservation approaches. This book will be of great interest to students and scholars of biodiversity conservation, marine studies, political geography, environmental governance and science policy studies. It will also be of interest to marine conservation governance professionals and policymakers.

Marine Protected Areas and Ocean Conservation Tundi S. Agardy, 1997-03-20 This book reviews the need for marine conservation, summarizes general measures for ocean and coastal conservation and explains the rationale for establishing marine protected areas. The second half of the book is essentially a

guideline for designing and implementing protected areas in order to make them viable and long lasting in their effectiveness

Marine Protected Areas in Southeast Asia Catherine P. S. Cheung, 2002 Marine protected areas in SE Asia were assessed and reviewed to analyze the increasing threats such as coastal development collecting of endangered species ornamental trading over exploitation pollution and tourism that lead to the depletion of the biodiversity resources of the marine protected areas in the region

Marine Protected Areas National Research Council, Commission on Geosciences, Environment, and Resources, Ocean Studies Board, Committee on the Evaluation, Design, and Monitoring of Marine Reserves and Protected Areas in the United States, 2001-06-01 Although the ocean and the resources within seem limitless there is clear evidence that human impacts such as overfishing habitat destruction and pollution disrupt marine ecosystems and threaten the long term productivity of the seas Declining yields in many fisheries and decay of treasured marine habitats such as coral reefs has heightened interest in establishing a comprehensive system of marine protected areas MPAs areas designated for special protection to enhance the management of marine resources Therefore there is an urgent need to evaluate how MPAs can be employed in the United States and internationally as tools to support specific conservation needs of marine and coastal waters Marine Protected Areas compares conventional management of marine resources with proposals to augment these management strategies with a system of protected areas The volume argues that implementation of MPAs should be incremental and adaptive through the design of areas not only to conserve resources but also to help us learn how to manage marine species more effectively

The Controversy over Marine Protected Areas Alex Caveen, Nick Polunin, Tim Gray, Selina Marguerite Stead, 2014-10-17 This book is a critical analysis of the concept of marine protected areas MPAs particularly as a tool for marine resource management It explains the reasons for the extraordinary rise of MPAs to the top of the political agenda for marine policy and evaluates the scientific credentials for the unprecedented popularity of this management option The book reveals the role played by two policy networks epistemic community and advocacy coalition in promoting the notion of MPA showing how advocacy for marine reserves by some scientists based on limited evidence of fisheries benefits has led to a blurring of the boundary between science and politics Second the study investigates whether the scientific consensus on MPAs has resulted in a publication bias whereby pro MPA articles are given preferential treatment by peer reviewed academic journals though it found only limited evidence of such a bias Third the project conducts a systematic review of the literature to determine the ecological effects of MPAs and reaches the conclusion that there is little proof of a positive impact on finfish populations in temperate waters Fourth the study uses discourse analysis to trace the effects of a public campaigning policy network on marine conservation zones MCZs in England which demonstrated that there was considerable confusion over the objectives that MCZs were being designated to achieve The book's conclusion is that the MPA issue shows the power of ideas in marine governance but offers a caution that scientists who cross the line between science and politics risk exaggerating the benefits of MPAs by glossing over uncertainties in the

data which may antagonise the fishing industry delay resolution of the MPA issue and weaken public faith in marine science if and when the benefits of MCZs are subsequently seen to be limited

Marine Protected Areas Economics, Management and Effective Policy Mixes OECD, 2017-06-05 Intense exploitation of our oceans and seas is degrading marine biodiversity and ecosystems at an alarming rate This report presents good practice insights for effectively managing marine protected areas MPAs one of the policy instruments available for the conservation and sustainable

Marine Protected Areas, 1999 *Guidelines for Marine Protected Areas* IUCN World Commission on Protected Areas, 1999 The world urgently needs a comprehensive system of Marine Protected Areas MPAs to conserve biodiversity and to help rebuild the productivity of the oceans The aim of these Guidelines is to help countries establish systems of MPAs as a key component of integrated management of coastal and marine areas and as part of their sustainable development The various actions to make an effective MPA are set out from early planning stages to implementation

Marine Protected Areas, 2007 Some Members of Congress among many others are interested in considering limiting human activity in some areas of the marine environment as one response to mounting evidence of deteriorating conditions and declining populations of living resources The purposes of proposed additional limits would be to both stem the decline and permit the rehabilitation of these environments and populations One method of implementing this concept is to designate areas where activity would be limited often referred to as marine protected areas MPAs Translating the MPA approach into a national program however requires resolution of many economic ecological and social debates The complexity of creating a program is compounded by controversy over the uses that would be allowed curtailed or prohibited in MPAs the purposes of a system of MPAs and the location size and distribution of MPA units One possible way to get past some of these complexities is to think of MPA designations as a form of zoning in the ocean Experiences in using the MPA designation in other countries may be instructive

However questions have been raised about the effectiveness of administration and enforcement and about changes in living resources at some of these sites Although the MPA designation has not been used widely in the United States numerous marine sites have been designated by federal and state governments for some kind of protection Perhaps the best known federal sites are units in the National Marine Sanctuary Program The Bush Administration has supported the MPA concept It designated the Northwestern Hawaiian Islands Marine National Monument in 2006 as the world s largest MPA and has supported the activities of the National Marine Protected Areas Center in the National Oceanic and Atmospheric Administration It has continued most of the Clinton Administration initiatives to coordinate protection of marine resources at designated sites including implementation of Executive Order 13158 issued in May 2000 which endorsed establishing and strengthening a comprehensive system of MPAs Additional actions by Congress would be needed to create a system that could be characterized as integrated or comprehensive Recent reports from the Pew Oceans Commission and the U S Commission on Ocean Policy endorsed the MPA concept Some issues that would likely be raised in any congressional discussions include whether new legislation is desired or needed what the basic characteristics of units in any MPA system should be how MPAs might be used to resolve use conflicts and whether adequate funding would be authorized and appropriated to both enforce the protected status and monitor and evaluate the ecological and social impacts of MPAs Earlier Congresses examined the concepts behind MPAs and experiences with protected areas as they considered appropriations and proposals to reauthorize coastal and marine resource protection laws However Congress has not authorized new MPA related activities although it addressed fishing access when it reauthorized the Magnuson Stevens Fishery Conservation and Management Act near the end of the 109th Congress The 110th Congress is likely to continue considering these topics This report will be updated as events warrant
