Communication Shock Ty Adams, Steve Smith, 2015-09-04 In the spirit of Alvin Toffler's acclaimed works peering into the future of the technological society Communication Shock is a concise history of communication technologies and an exploration of the possible social and human impacts of nanotechnology on the ecology of human communication As we

become increasingly more networked with communication technologies we must come to understand and confront the social impact of these changes More importantly we must wisely choose in embracing or rejecting these technologies and exploring how we might do both by striking an appropriate balance Grounded in communication theory and praxis Communication Shock brings some objectivity to the discussion of technology maps its development and encourages a rational conversation about its potential problems and promise It challenges readers to reach their own conclusions about the future imagined and unimaginable about the fundamental values in conflict and how one might choose to embrace or contest them to maintain individual autonomy in the face of increasingly ubiquitous marketing and technological change Present and emerging communications technologies hold the promise for a bold new future but they also have their inherent risks and drawbacks Communication shock is the human response conscious or unconscious wherein the individual chooses to resist the growing pervasiveness of technology in his or her life by seeking ways to reduce or redirect new technologies or to reject the addition of such technologies altogether Here is a framework for understanding the potential of the evolving technologies determining which are essential and which are distractions from the life that one believes to be meaningful and making informed choices for the life one wishes to live

Japanese Telecommunications Ruth Taplin,Masako Wakui,2006-02-01 Presenting a comprehensive survey of the telecommunications industry in Japan Taplin and Wakui cover the different sectors of the industry including mobile broadband and satellite whilst considering key questions such as the structure and economics of the industry government policy and international relations issues connected to the industry The volume brings together unique analysis by renowned experts in the telecommunications field One major overall problem is that unlike many other industries Japan has lagged behind other countries in telecommunications Japanese Telecommunications considers why this should be so showing how far this is attributable to an unmodernized industry structure and assessing the measures being taken to address the problem After over a decade of struggle Japan has recorded rapid uptake of broadband and Japanese advanced mobile services have become increasingly successful on a global scale Japan has also undergone regulatory reform and competition policy is now given top priority by government Taplin and Wakui examine the most recent developments and provide signposts for the future

Mobile Media Jo Groebel,Eli M. Management of Technology and Innovation in Japan Cornelius Herstatt, Christoph Stockstrom, Hugo Tschirky, Akio Nagahira, 2006-02-23 What Makes this Book Unique No crystal ball is required to safely predict that in the future even more than in the past innovativeness will be a primary criterion distinguishing successful from unsuccessful companies At the latest since Michael Porter's study on the competitiveness of nations the same criterion holds even for the evaluation of entire countries and national economies Despite the innumerable number of publications and recommendations on innovation competitive innovativeness is still a rare competency The latest publication of UNICE the European Industry organization representing 20 million large midsize and small companies speaks a clear language Europe qualifies to roughly 60% 70% of the innovation strength of the US Japan The record unemployment in many EU countries does not contradict this message A main reason may be given by the fact that becoming an innovative organization means increased openness towards the new and more tolerance towards risks and failures both challenging the inherently difficult management art of cultural change Further lacking innovativeness is often related to legal and fiscal barriers which rather hinder than foster innovative activities Yet another reason to explain Europe's notorious innovation gap refers to insufficient financial R D resources on the company as well as on the national level As a result for example high ranking decisions on the level of the European Commission are taken to increase R D expenditures in the European Union from roughly 2% to 3% of GNP

Managing Business in a Multi-channel World Timo Saarinen, Markku Tinnilä, Anne Tseng, 2005-01-01 This book addresses the concerns of existing companies who wish to succeed in the new multi channel environment as it develops and becomes commonplace
