Political Change and Material Culture in Middle to Late Bronze Age Canaan Shlomit Bechar,2022-09-13 Do shifts in material culture instigate administrative change or is it the shifting political winds that affect material culture This is the central question that Shlomit Bechar addresses in this book taking the transition from the Middle to Late Bronze Age seventeenth fourteenth centuries BCE in northern Canaan as a test case Combining archaeological and historical analysis Bechar identifies the most significant changes evident in architectural and ceramic remains from this period and then explores how and why contemporary political shifts may have influenced or been influenced by these developments Bechar persuasively argues that the Egyptian conquest of the southern Levant enabled by local economic decline following the

expulsion of the Hyksos and the fall of northern Syrian cities was the impetus for these changes in ceramics and architecture. Using a macro typological approach to examine the ceramic assemblages, she also discusses the impact of the influx of Aegean imports, suggesting that while attached specialists were primarily responsible for ceramic production in the Middle Bronze Age, Late Bronze Age ceramics were increasingly made by independent specialists. Another important result of the new administrative system created following Thutmose III's campaign is an important contribution to our understanding of the transition between the Middle and Late Bronze Ages. This original and insightful book will appeal to specialists in the Bronze Age Levant, especially those interested in using ceramic assemblages to examine social and political change. **Medical**

Imaging and Radiotherapy Research: Skills and Strategies Aarthi Ramlaul, 2020-03-23. This exciting new book equips radiography students and practitioners with the key skills and strategies required to undertake research within medical imaging and radiotherapy and to disseminate the research findings effectively. Quantitative and qualitative research methods are covered with guidance provided on the entire research process from literature researching, information management and literature evaluation through to data collection, data analysis and writing up. Attention is drawn to sampling errors and other potential sources of bias and the conduct of randomized controlled trials, systematic reviews and meta-analyses are clearly explained. Specific instruction is given on the structure and presentation of dissertations, writing journal articles for publication and the dissemination of research findings at conferences. Information on patient and public involvement in research and research funding bodies are also provided with advice on how to maximize the likelihood of success when submitting applications for funding. **Handbook of Digital Resources in Mathematics Education** Birgit

Pepin, Ghislaine Gueudet, Jeffrey Choppin, 2024-06-21. This handbook presents the state of the art scholarship on theoretical frames, mathematical content, learning environments, pedagogic practices, teacher professional learning and policy issues related to the development and use of digital resources in mathematics education. With the advent of more and more open access digital resources, teachers choose from the web what they see fit for their classroom; students choose in the moment what they need for their projects and learning paths. However, educators and students often find it difficult to choose from the abundance of materials on offer as they are uncertain about their quality and beneficial use. It is clear that at a time of bouleversement of the teaching-learning processes, it is crucial to understand the quality and the potentially transformative aspects of digital resources. This book provides comprehensive analyses of and insights into the transformative aspects of digital resources. **Algorithms and Data Structures** Frank Dehne, Alejandro López-Ortiz, Jörg-Rüdiger Sack, 2005-08-29.

The papers in this volume were presented at the 9th Workshop on Algorithms and Data Structures WADS 2005. The workshop took place during August 15-17, 2005 at the University of Waterloo, Waterloo, Canada. **Advanced Performance**

Musser,Blake E. Peterson,William F. Burger,2013-09-16 Mathematics for Elementary Teachers 10th Edition establishes a solid math foundation for future teachers Thoroughly revised with a clean engaging design the new 10th Edition of Musser Peterson and Burgers best selling textbook focuses on one primary goal helping students develop a deep understanding of mathematical concepts so they can teach with knowledge and confidence The components in this complete learning program from the textbook to the e Manipulative activities to the Childrens Videos to the online problem solving tools resource rich website and Enhanced WileyPLUS work in harmony to help achieve this goal WileyPLUS sold separately from text **Extensions of Dynamic Programming for Combinatorial Optimization and Data Mining** Hassan AbouEisha,Talha Amin,Igor Chikalov,Shahid Hussain,Mikhail Moshkov,2018-05-22 Dynamic programming is an efficient technique for solving optimization problems It is based on breaking the initial problem down into simpler ones and solving these sub problems beginning with the simplest ones A conventional dynamic programming algorithm returns an optimal object from a given set of objects This book develops extensions of dynamic programming enabling us to i describe the set of objects under consideration ii perform a multi stage optimization of objects relative to different criteria iii count the number of optimal objects iv find the set of Pareto

optimal points for bi criteria optimization problems and v to study relationships between two criteria It considers various applications including optimization of decision trees and decision rule systems as algorithms for problem solving as ways for knowledge representation and as classifiers optimization of element partition trees for rectangular meshes which are used in finite element methods for solving PDEs and multi stage optimization for such classic combinatorial optimization problems as matrix chain multiplication binary search trees global sequence alignment and shortest paths The results presented are useful for researchers in combinatorial optimization data mining knowledge discovery machine learning and finite element methods especially those working in rough set theory test theory logical analysis of data and PDE solvers This book can be used as the basis for graduate courses Calculus (Paper) Jon Rogawski,2007-06-22 This new text presents calculus with solid mathematical precision but with an everyday sensibility that puts the main concepts in clear terms It is rigorous without being inaccessible and clear without being too informal it has the perfect balance for instructors and their students
