Robot Ecology and the Science Fiction Film J. P. Telotte, 2016-01-22 This book offers the first specific application in film studies of what is generally known as ecology theory shifting attention from history to the in this case media environment It takes the robot as its subject because it has attained a status that resonates not only with some of the key concerns of contemporary culture over the last century but also with the very nature of film While the robot has given us a vehicle for exploring issues of gender race and a variety of forms of otherness and increasingly for asking questions about the very nature and meaning of life this image of an artificial being typically anthropomorphic also invariably implicates the cinema's own and quite fundamental artificing of the human Looking across genres across specific media forms and across closely linked conceptualizations Telotte sketches a context of interwoven influences and meanings The result is that this study of the cinematic robot while mainly focused on science fiction film also incorporates its appearance in for example musicals cartoons television advertising toys and literature

Horror Film André Loiselle,2019-10-28 The horror film generally presents a situation where normality is threatened by a monster From this premise Theatricality in the Horror Film argues that scary movies often create their terrifying effects stylistically and structurally through a radical break with the realism of normality in the form of monstrous theatricality Theatricality in the horror fi lm expresses itself in many ways For example it comes across in the physical performance of monstrosity the overthe top performance of a chainsaw wielding serial killer whose nefarious gestures terrify both his victims within the film and the audience in the cinema Theatrical artifice can also appear as a stagy cemetery with broken down tombstones and twisted gnarly trees or through the use of violently aberrant filmic techniques or in the oppressive claustrophobia of a single room setting reminiscent of classical drama Any performative element of a film that flaunts its difference from what is deemed realistic or normal on screen might qualify as an instance of theatrical artifice creating an intense affect in the audience This book argues that the artificiality of the frightening spectacle is at the heart of the dark pleasures of horror **A Little Solitaire** Murray Pomerance,R. The Universe of Oz Kevin K. Durand, Mary K. Leigh, 2010-03-08. The Wizard of Oz has captured the imagination of the public since publication of L. Frank Baum's first book of the series in 1900. Oz has shaped the way we read children's literature, view motion pictures, and experience musicals. Oz has captured the scholarly imagination as well. The seventeen essays in this book address numerous questions of the boundaries between literature, film, and stage, and these have become essential to Oz scholarship. Together, the essays explore the ways in which Oz tells us much about ourselves, our society, and our journeys.

Urban Mindscales of Europe, 2016-08-01. Urban mindscales are structures of thinking about a city built on conceptualisations of the city's physical landscape as well as on its image as transported through cultural representation, memory, and imagination. This book pursues three main strands of inquiry in its exploration of these landscapes of the mind in a European context. The first strand concerns the theory and methodology of researching urban mindscales and urban imaginaries. The second strand investigates some of the representations, symbols, and collective images that feed into our understanding of European cities. It discusses representations of the city in literature, film, television, and other cultural forms, which in James Donald's phrase, constitute archives of urban images. The third and last section of the volume concentrates on the relationship between the collective mindscales of cities, urban policy, and the practice of city marketing.

Blade Runner Scott Bukatman, 2017-10-26. Ridley Scott's dystopian classic *Blade Runner*, an adaptation of Philip K. Dick's novel *Do Androids Dream of Electric Sheep*, combines noir with science fiction to create a groundbreaking cyberpunk vision of urban life in the twenty-first century. With replicants on the run, the rain-drenched Los Angeles which *Blade Runner* imagines is a city of oppression and enclosure, but a city in which transgression and disorder can always erupt. Graced by stunning sets, lighting effects, costumes, and photography, *Blade Runner* succeeds brilliantly in depicting a world at once uncannily familiar and startlingly new. In his innovative and nuanced reading, Scott Bukatman details the making of *Blade Runner* and its steadily improving fortunes following its release in 1982. He situates the film in terms of debates about postmodernism, which have informed much of the criticism devoted to it, but argues that its tensions derive also from the quintessentially twentieth-century modernist experience of the city as a space both imprisoning and liberating. In his foreword to this special edition published to celebrate the 20th anniversary of the BFI Film Classics series, Bukatman suggests that *Blade Runner*'s visual

complexity allows it to translate successfully to the world of high definition and on demand home cinema He looks back to the science fiction tradition of the early 1980s and on to the key changes in the final version of the film in 2007 which risk diminishing the sense of instability created in the original
