Representation and Derivation in the Theory of Grammar H. Haider, K. Netter, 2012-12-06 Derivation or Representation Hubert Haider Klaus Netter 1 The Issue Derivation and Representation these keywords refer both to a conceptual as well as to an empirical issue Transformational grammar was in its outset Chomsky 1957 1975 a derivational theory which characterized a well formed sentence by its derivation i e a set of syntactic representations defined by a set of rules that map one representation into another The set of mapping rules the transformations eventually became more and more abstract and were trivialized into a single one namely move a a general movement rule The constraints on movement were singled out in systems of principles that apply to the resulting representations i e the configurations containing a moved element and its extraction site the trace The introduction of trace theory d Chomsky 1977 ch 3 17 ch 4 in principle opened up the possibility of completely abandoning movement and generating the possible outputs of movement directly i e as structures that contain gaps representing the extraction sites *Phonological Representations* John Coleman, 2005-11-24 Rewriting rules derivations and underlying representations is an enduring characteristic of generative phonology In this book John Coleman argues that this is unnecessary The expressive resources of context free Unification grammars are sufficient to characterize phonological structures and alternations According to this view all phonological forms and constraints are partial descriptions of surface representations This framework now called Declarative Phonology is based on a detailed examination of the formalisms of feature theory syllable theory and the leading varieties of nonlinear phonology Dr Coleman illustrates this with two extensive analyses of the phonological structure of words in English and Japanese As Declarative Phonology is surface based and highly restrictive it is consistent with cognitive psychology and amenable to straightforward computational implementation Derivation and Explanation in the Minimalist Program Samuel Epstein, T. D. Seely, 2008-04-15 Derivation and Explanation in the Minimalist Program presents accessible cutting edge research on an enduring and fundamental question confronting all linguistic inquiry the respective roles of derivation and representation Presents accessible cutting edge research on the respective roles of derivation and representation in syntactic inquiry Discusses a wide range of phenomena and also includes alternative representational perspectives Features papers by M Brody C Collins S Epstein J Frampton S Gutmann N Hornstein R Kayne H Kitahara J McCloskey N Richards D Seely E Torrego J Uriagereka C J W Zwart
