Representations Of Musical Signals:

Representations of Musical Signals Giovanni De Poli,Aldo Piccialli,Curtis Roads,1991-05-13 Representations of Musical Signals describes a new generation of digital audio and computer music systems made possible by recent advances in digital signal processing theory hardware design and programming techniques International Workshop on Models and Representations of Musical Signals ,1992

Musical Signal Processing Curtis Roads,Stephen Travis Pope,Aldo Piccialli,Giovanni De Poli,2013-12-19 Compiled by an international array of musical and technical specialists this book deals with some of the most important topics in modern musical signal processing Beginning with basic concepts and leading to advanced applications it covers such essential areas as sound synthesis including detailed studies of physical modelling and granular synthesis control signal synthesis sound transformation including convolution analysis resynthesis phase vocoder wavelets analysis by chaotic functions object oriented and artificial intelligence representations musical interfaces and the integration of signal processing techniques in concert performance

Time-frequency Representation of Musical Signals Using the Discrete Hermite Transform Jacob Joseph Trombetta,2011 Time frequency representations of musical signals help with the visualization and understanding of the building blocks of music Difficulties with different representations limit the amount of information that can be extracted from the signal processing techniques used The discrete Hermite transform has already proven to be an excellent choice in biomedical signal processing applications We will show that the discrete Hermite transform is an excellent choice for the analysis of musical signals as well The discrete Hermite basis functions are approximately sinusoidal with shorter function supports than the Fourier techniques This gives them better frequency resolution than both classic Fourier transforms and current wavelet transforms for musical signals We will show that the discrete Hermite transform and the time frequency display it produces the Hermitian distribution will be an invaluable resource to the sign processing community

Signal Processing Methods for Music Transcription Anssi Klapuri,Manuel Davy,2007-02-26 Signal Processing Methods for Music Transcription is the first book dedicated to uniting research related to signal processing algorithms and models for various aspects of music transcription such as pitch analysis rhythm analysis percussion transcription source separation instrument recognition and music structure analysis Following a clearly structured pattern each chapter provides a comprehensive review of the existing methods for a certain subtopic while covering the most important state of the art methods in detail The concrete algorithms and formulas are clearly defined and can be easily implemented and tested A number of approaches are covered including for example statistical methods perceptually motivated methods and unsupervised learning methods The text is enhanced by a common reference and index

Advances in Music Information Retrieval Zbigniew W. Ras,Alicja Wierzchowska,2010-03-10 Sound waves propagate through various media and allow communication or entertainment for us humans Music we hear or create can be perceived in such aspects as rhythm melody harmony timbre or mood All these elements of music can be of interest for users of music

information retrieval systems Since vast music repositories are available for everyone in everyday use both in private collections and in the Internet it is desirable and becomes necessary to browse music collections by contents Therefore music information retrieval can be potentially of interest for every user of computers and the Internet There is a lot of research performed in music information retrieval domain and the outcomes as well as trends in this research are certainly worth popularizing This idea motivated us to prepare the book on Advances in Music Information Retrieval It is divided into four sections MIR Methods and Platforms Harmony Music Similarity and Content Based Identification and Retrieval Glossary of basic terms is given at the end of the book to familiarize readers with vocabulary referring to music information retrieval

The Musical Representation Charles O. Nussbaum, 2007 How human musical experience emerges from the audition of organized tones is a riddle of long standing In The Musical Representation Charles Nussbaum offers a philosophical naturalist's solution Nussbaum founds his naturalistic theory of musical representation on the collusion between the physics of sound and the organization of the human mind brain He argues that important varieties of experience afforded by Western tonal art music since 1650 arise through the feeling of tone the sense of movement in musical space cognition emotional arousal and the engagement by way of specific emotional responses of deeply rooted human ideals Construing the art music of the modern West as representational as a symbolic system that carries extramusical content Nussbaum attempts to make normative principles of musical representation explicit and bring them into reflective equilibrium with the intuitions of competent listeners Nussbaum identifies three modes of musical representation describes the basis of extramusical meaning and analyzes musical works as created historical entities performances of which are tokens or replicas In addition he explains how music gives rise to emotions and evokes states of mind that are religious in character Nussbaum's argument proceeds from biology psychology and philosophy to music and occasionally from music back to biology psychology and philosophy The human mind brain writes Nussbaum is a living record of its evolutionary history relatively recent cognitive acquisitions derive from older representational functions of which we are hardly aware Consideration of musical art can help bring to light the more ancient cognitive functions that underlie modern human cognition The biology psychology and philosophy of musical representation he argues have something to tell us about what we are based on what we have been
