Reproductive Effects of Chemical, Physical, and Biologic Agents Anthony R. Scialli, Armand Lione, G. K. Boyle Padgett, 1995 *Evaluating Chemical and Other Agent Exposures for Reproductive and Developmental Toxicity* National Research Council, Commission on Life Sciences, Board on Environmental Studies and Toxicology, Committee on Toxicology, Subcommittee on Reproductive and Developmental Toxicology, 2001-04-13 The United States Navy has been concerned for some time with protecting its military and civilian personnel from reproductive and developmental hazards in the workplace As part of its efforts to reduce or eliminate exposure of Naval personnel and their families to reproductive and developmental toxicants the Navy requested that the National Research Council NRC recommend an approach that can be used to evaluate chemicals and physical agents for their potential to cause reproductive and developmental toxicity The NRC assigned this project to the Committee on Toxicology which convened the Subcommittee on Reproductive and Developmental Toxicology to prepare this report In this report the subcommittee recommends an approach for evaluating agents for potential reproductive and developmental toxicity and demonstrates how that approach can be used by the Navy This report has been reviewed in draft form by individuals chosen for their diverse perspectives and technical expertise in accordance with procedures approved by the NRC's Report Review Committee The purpose of this independent review is to provide candid and critical comments that will assist the institution in making its published report as sound as possible and to ensure that the report meets institutional standards for objectivity evidence and responsiveness to the study charge The review comments and draft manuscript remain confidential to protect the integrity of the deliberative process We wish to thank the following individuals for their review of this report James Chen National Center for Toxicological Research George Daston Procter and Gamble Company Jerry Heindel National Institute of Environmental Health Sciences Grace Lemasters University of Cincinnati and John Young National Center for Toxicological Research **Chemically Induced Birth Defects** James Schardein, 2000-04-11 This thoroughly revised and updated reference addresses the drugs and chemicals causing malformations and congenital anomalies in the human fetus comprehensively reviewing experimental studies in animals and clinical data on human development primarily in the organogenesis period Addressing current public health concerns over teratogens Chemical **Developmental and Reproductive Toxicology** Ronald D. Haschek, Colin G. Rousseaux, Matthew A. Wallig, Brad Bolon, Ricardo Ochoa, 2001-10-16 A comprehensive understanding of toxicologic pathology is essential for those in industry academia and government who make decisions concerning the safety and efficacy of drugs and chemicals Toxicologic

pathology relies heavily on the fields of both toxicology and pathology which are well covered individually in various texts and references however there are few texts that address the field of toxicologic pathology The Handbook of Toxicologic Pathology fills this void and is thus essential for all health professionals within or interacting with the field of toxicologic pathology This two volume set provides the reader with a single reference for toxicologic pathology In volume I the book covers toxicologic pathology in its basic aspects including its definition the basic biochemical and morphologic mechanisms underlying the discipline the basic practice of toxicologic pathology including special techniques and issues essential to the understanding of toxicologic pathology such as risk assessment experimental design and statistical analysis Next the book moves to specific issues affecting the practice toxicologic pathology including issues such as knowledge management regulatory affairs and writing pathology reports Finally Volume I closes with several chapters that deal with specific classes of environmental toxicants such as endocrine disruptors and heavy metals Volume II addresses the toxicologic pathology in a thoroughly standardized systems manner addressing the basic structure and function of a particular organ system its response to toxic injury mechanisms of injury and methods of evaluation of such injury Key Features Easy to find up to date reference information Graphic and photographic plates Current hot topics and anticipated changes in toxicologic pathology Standardized chapter format Topics that are addressed in both a broad and deep manner resulting in a stand alone text Added coverage of important environmental toxicants Chapters authored by internationally recognized experts and peer reviewed

Small Animal Toxicology - E-Book Michael E. Peterson, Patricia A. Talcott, 2005-11-11 This revised and expanded reference is a valuable aid for the practicing veterinary clinician in diagnosing and determining treatment for toxic exposures in small animals and for veterinary students as a supplement to their classroom instruction It contains chapters addressing nontraditional areas of toxicology not covered in conventional toxicology texts It also covers areas of toxicology which seem basic but are rarely discussed such as taking a toxicological history establishing a minimum database providing supportive care and managing emergency treatment of the poisoned patient The book is organized into three sections including 20 new chapters and new topics such as grapes and raisins lilies Christmas time plants mercury and accidental poisoning in non traditional pets New two color design makes the book more esthetically pleasing and allows for quick retrieval of information Toxic Plant Information Summary tables make treatments for plant intoxications easy to find Toxic Plant Quick Reference Based on Clinical Signs tables are included to support small animal veterinarians in cases of potential toxic plant ingestion Summary charts at the beginning of each chapter in the Specific Toxicants section contain bulleted lists with clear cut information on the specific toxicant the clinical signs and prognosis A comprehensive review of all known potentially toxic substances is provided from A acetaminophen to Z zinc including the very latest on grape and raisin toxicity making this the most up to date and thorough text in this field 45 different experts contribute to this book all from the field of veterinary toxicology and medicine 20 new chapters have been added New topics include a list of toxicants affecting body

systems management of toxins in pregnancy diagnostic toxicology bacterial toxins and cosmetic toilet articles Snake bite injuries are treated in two separate expanded chapters Pit Vipers and Coral Snakes Section on pharmaceuticals includes bromides anticonvulsants tricyclic antidepressants monoamine oxidase inhibitors B adrenergic toxicities and vitamins A and D Additional specific toxicants are covered including Amitraz hydramethylon ethanol mercury toad toxins poisonous frogs salamanders newts and venomous arthropods Additional specific toxicants are covered including Amitraz hydramethylon ethanol mercury toad toxins poisonous frogs salamanders newts and venomous arthropods

Human Developmental Toxicants James L. Schardein, Orest T. Macina, 2006-08-15 Presenting the first database of its kind this unique reference illustrates the relationships between the chemistry and developmental toxicity of a number of important pharmaceuticals and industrial toxicants Human Developmental Toxicants contains up to date and concise information on the chemical structures properties and biological activities for 50 known agents that adversely affect prenatal and postnatal human development in terms of growth viability structure and function This book presents data linking chemical and structural properties of specific toxicants as they relate to toxic effects dosage timing and route of exposure Focusing on one compound per chapter the book also includes associated biological data from animals for each agent covered Accompanying downloadable resources summarize all of the data discussed in the text within an electronic database In addition the CD contains three dimensional structure representations and 49 calculated physicochemical and topological parameters of the selected molecules This information is useful for building structure activity relationship SAR models linking the chemical properties with observed human developmental toxicity As scientists continue to explore how chemicals alter human development Human Developmental Toxicants contains the necessary information to further identify which chemical properties are responsible for adverse effects This reference provides toxicologists teratologists chemists and other scientists with the latest data and information needed to perform risk assessments predict chemicals that may produce developmental toxicity and regulate harmful exposure

Big Data in Predictive Toxicology Daniel Neagu, Andrea-Nicole Richarz, 2019-12-04 The rate at which toxicological data is generated is continually becoming more rapid and the volume of data generated is growing dramatically This is due in part to advances in software solutions and cheminformatics approaches which increase the availability of open data from chemical biological and toxicological and high throughput screening resources However the amplified pace and capacity of data generation achieved by these novel techniques presents challenges for organising and analysing data output Big Data in Predictive Toxicology discusses these challenges as well as the opportunities of new techniques encountered in data science It addresses the nature of toxicological big data their storage analysis and interpretation It also details how these data can be applied in toxicity prediction modelling and risk assessment This title is of particular relevance to researchers and postgraduates working and studying in the fields of computational methods applied and physical chemistry cheminformatics biological sciences predictive toxicology and safety and hazard assessment
