Wilson, Julia A. **Key to the Herpetofauna of the Continental United States and Canada** Robert Powell, Joseph T. Collins, Errol D. Hooper, Jr., 2019-07-26 This profusely illustrated comprehensive key for identifying amphibians and reptiles from the continental United States and Canada incorporates a wealth of scientific findings Since the first edition was published in 1998 and the second in 2012 the number of currently recognized species of native amphibians and reptiles in the area covered by this key has increased from 545 to 634 to 685 and the number of established non native species has increased from 39 to 58 to 67 The increase in native taxa reflects the dynamic nature of modern systematics and the use of new especially molecular techniques to elucidate relationships and redefine species boundaries The increase in non native

species reflects the porosity of the North American borders when it comes to controlling animal imports. The key is easy to use and illustrated with outstanding line drawings that show details of color patterns and structures used for identification. To accommodate the additional taxa, the number of line drawings in this third edition has increased from 257 to 279 to 295. In addition, nine maps illustrate the distributions of species that have been recognized since the publication of maps in the most recent editions of the Peterson Field Guides to the reptiles and amphibians of eastern, central, and western North America. A large number of annotations detail current taxonomic ambiguities or disagreements, and the literature cited has been expanded. Collectively, these features enhance opportunities to teach and learn the classification and identification of amphibians and reptiles in the continental United States and Canada.

Natural History of West Indian Reptiles and Amphibians Robert W.

Henderson, Robert Powell, 2009. The reference source that biologists interested in West Indian herpetofauna have been waiting for. Steven Reichling, curator, Memphis Zoo. A state-of-the-art compendium. The West Indies is one of the hottest of the world's biodiversity hot spots and will continue to be a focus of ecological research, now invigorated by this definitive synthesis. S. Blair Hedges, Pennsylvania State University. The West Indies have become a major focus for biologists and conservationists. Its herpetofauna is considered one of the richest and most vulnerable in the world. These fragile natural environments are home to many unique animals that occur only on these islands. Loss of habitat, development of scenic areas for a burgeoning tourist industry, and the introduction of invasive species have contributed to an already tenuous situation for many of the region's native species. This volume summarizes the natural history of each of the more than seven hundred species of frogs and reptiles that live in the West Indies. Sure to be the starting point for all future research on West Indian amphibians and reptiles, it will be an essential companion to the biologist contemplating or conducting research in the area.

**Alien Reptiles and Amphibians** Fred Kraus, 2008-12-19. Transportation of species to areas outside their native ranges has been a feature of human culture for millennia. During this time, such activities have largely been viewed as beneficial or inconsequential. However, it has become increasingly clear that human-caused introductions of alien biota are an ecological disruption whose consequences rival those of better-known insults like chemical pollution, habitat loss, and climate change. Indeed, the irreversible nature of most alien species introductions makes them less prone to correction than many other ecological problems. Current reshuffling of species ranges is so great that the present era has been referred to by some as the Homogocene, in an effort to reflect the unique magnitude of the changes being made. These alien interlopers often cause considerable ecological and economic damage where introduced. Species extinctions, food web disruptions, community alterations, ecosystem conversion, changes in nutrient cycling, fisheries collapse, watershed degradation, agricultural loss, building damage, and disease epidemics are among the destructive and frequently unpredictable ecological and economic effects that invasive

alien species can inflict The magnitude of these damages continues to grow with virtually all environments heavily used by humans now dominated by alien species and many natural areas becoming increasingly prone to alien invasion as well Attention to this problem has increased in the past decade or so and efforts to prevent or limit further harm are gaining wider scientific and political acceptance **Bulletin of the Florida Museum of Natural History**, 1995 *Snakes of the World* Van Wallach, Kenneth L. Williams, Jeff Boundy, 2014-04-22 *Snakes of the World A Catalogue of Living and Extinct Species* the first catalogue of its kind covers all living and fossil snakes described between 1758 and 2012 comprising 3 509 living and 274 extinct species allocated to 539 living and 112 extinct genera Also included are 54 genera and 302 species that are dubious or invalid resulting in record *Selenopidae of the Northwestern Hemisphere* Sarah Cole Crews, 2008

*Threatened Amphibians of the World* S. N. Stuart, Conservation International, 2008 Amphibians are facing an extinction crisis but getting to the facts has been difficult *Threatened Amphibians of the World* is a visual journey through the first ever comprehensive assessment of the conservation status of the world's 6 000 known species of frogs toads salamanders and caecilians All 1 900 species known to be threatened with extinction are covered including a description of threats to each species and an evaluation of conservation measures in place or needed Each entry includes a photograph or illustration of the species where available a distribution map and detailed information on range population and habitat and ecology Introductory chapters present a detailed analysis of the results complemented by a series of short essays written by many of the world's leading herpetologists Appendices include annotated lists of lower risk species and a country by country listing of threatened amphibians published description **Netherlands Antilles and Aruba** Kai P.
