Short and concise, the book has two main parts: Asking Good Questions and Generating Good Answers. In the first section, one chapter each is devoted to the three fundamental questions in political science: who cares, what happened, and why. These take up among many other topics: crafting a literature review, creating hypotheses, measuring concepts, and the difference between correlation and causation. The second section of the book has chapters about choosing a research design, choosing cases, working with written documents, and working with numbers. All of these are essential skills for undergraduates to have when reading published work and conducting their own research. Every chapter ends with several exercises where students can read examples from published work and develop their own skills as researchers. Finally, unlike most research methods books, Christopher Howard sprinkles humor and surprising analogies throughout.      *Research Guide to the Library for Political Scientists* Constance McCarthy, Northwestern University (Evanston, Ill.). Powner's new title *Empirical Research and Writing: A Student's Practical Guide* provides valuable advice and guidance on conducting and writing about empirical research. Chapter by chapter, students are guided through the key steps in the research process. Written in a lively and engaging manner and with a dose of humor, this practical text shows students exactly how to choose a research topic, conduct a literature review, make research design decisions, collect and analyze data, and then write up and present the results. The book's approachable style and just-in-time information delivery make it a text students will want to read, and its wide-ranging and surprisingly sophisticated coverage will make it an important resource for their later coursework.
