Research Agenda For Test Methods Model:

Research Agenda for Test Methods and Models to Simulate the Accelerated Aging of Infrastructure Materials National Research Council, Division on Engineering and Physical Sciences, Commission on Engineering and Technical Systems, Board on Infrastructure and the Constructed Environment, 1999-06-29 In the next several decades a significant percentage of the country's transportation communications environmental and power system infrastructures as well as public buildings and facilities will have to be renewed or replaced Next generation infrastructure will have to meet very high expectations in terms of durability constructability performance and life cycle cost One way of meeting future expectations will be through improved high performance materials but before new materials can be confidently deployed in the field a thorough and comprehensive understanding must be developed of their long term performance in a variety of applications and physical environments The National Science Foundation NSF has launched an initiative to promote the development of innovative short term laboratory or in situ tests for making accurate reliable predictions of the long term performance of materials and requested that the National Research Council NRC conduct a workshop as a reconnaissance level assessment of models and methods that are being used or potentially could be used to determine the long term performance of infrastructure materials and components

Methods and Models in Transport and Telecommunications Aura Reggiani, Laurie A. Schintler, 2006-03-30 One aspect of the new economy is a transition to a networked society and the emergence of a highly interconnected interdependent and complex system of networks to move people goods and information An example of this is the increasing reliance of networked systems e g air transportation networks electric power grid maritime transport etc on telecommunications and information infrastructure Many of the networks that evolved today have an added complexity in that they have both a spatial structure i e they are located in physical space but also an a spatial dimension brought on largely by their dependence on information technology They are also often just one component of a larger system of geographically integrated and overlapping networks operating at different spatial levels An understanding of these complexities is imperative for the design of plans and policies that can be used to optimize the efficiency performance and safety of transportation telecommunications and other networked systems In one sense technological advances along with economic forces that encourage the clustering of activities in space to reduce transaction costs have led to more efficient network structures At the same time the very properties that make these networks more efficient have also put them at a greater risk for becoming disconnected or significantly disrupted when super connected nodes are removed either intentionally or through a targeted attack

Toward a drugs and crime research agenda for the 21st century, 2003 For criminal justice practitioners who deal with drugs and crime day in and day out the reality of the drugs crime nexus is indisputable In a manual designed to help police chiefs and sheriffs control drug abuse the International Association of Chiefs of Police IACP stated unequivocally its belief in a significant though complex relationship between drug abusers and criminal

offenders Change one group IACP proposed and you change the other If there is a reduction in the number of people who abuse drugs in your community there will be a reduction in the commission of certain types of crime in your community

In 1997 the U S Environmental Protection Agency EPA established regulatory standards to address health risks posed by inhaling tiny particles from smoke vehicle exhaust and other sources At the same time Congress and the EPA began a multimillion dollar research effort to better understand the sources of these airborne particles the levels of exposure to people and the ways that these particles cause disease To provide independent guidance to the EPA Congress asked the National Research Council to study the relevant issues The result was a series of four reports on the particulate matter research program The first two books offered a conceptual framework for a national research program identified the 10 most critical research needs and described the recommended timing and estimated costs of such research The third volume began the task of assessing initial progress made in implementing the research program This the fourth and final volume gauged research progress made over a 5 year period on each of the 10 research topics The National Research Council concludes that particulate matter research has led to a better understanding of the health effects caused by tiny airborne particles However the EPA in concert with other agencies should continue research to reduce further uncertainties and inform long term decisions
