Research in Collegiate Mathematics Education III James J. Kaput, Ed Dubinsky, Alan H. Schoenfeld, Thomas P. Dick, 1998
Volume 3 of Research in Collegiate Mathematics Education RCME presents state of the art research on understanding teaching and learning mathematics at the post secondary level This volume contains information on methodology and research concentrating on these areas of student learning Problem Solving Understanding Concepts and Understanding Proofs

Research in Collegiate Mathematics Education Ed Dubinsky, Alan H. Schoenfeld, James J. Kaput, 1994 Research in Collegiate Mathematics Education, III James J. Kaput, 1998 Research in Collegiate Mathematics Education VI Fernando Hitt, Guershon Harel, Annie Selden, 2006

The sixth volume of Research in Collegiate Mathematics Education presents state of the art research on understanding teaching and learning mathematics at the postsecondary level The articles advance our understanding of collegiate mathematics education while being readable by a wide audience of mathematicians interested in issues affecting their own students This is a collection of useful and informative research regarding the ways our students think about and learn mathematics The volume opens with studies on students experiences with calculus reform and on the effects of concept based calculus instruction The next study uses technology and the van Hiele framework to help students construct concept images of sequential convergence The volume continues with studies on developing and assessing specific competencies in real analysis on introductory complex analysis and on using geometry in teaching and learning linear algebra It closes with a study on the processes used in proof construction and another on the transition to graduate studies in mathematics Whether they are specialists in education or mathematicians interested in finding out about the field readers will obtain new insights about teaching and learning and will take away ideas that they can use Information for our distributors This series is published in cooperation with the Mathematical Association of America

Research in Collegiate Mathematics Education II James J. Kaput, Ed Dubinsky, Alan H. Schoenfeld, 1996

The field of research in collegiate mathematics education has grown rapidly over the past 25 years Many people are convinced that improvement in mathematics education can only come with a greater understanding of what is involved when a student tries to learn mathematics and how pedagogy can be more directly related to the learning process Today there is a substantial body of work and a growing group of researchers addressing both basic and applied issues of mathematics education at the collegiate level This second volume in Research in Collegiate Mathematics Education begins with a paper that attends to methodology and closes with a list of questions The lead off paper describes a distinctive approach to research on key concepts in the undergraduate mathematics curriculum This approach is distinguished from others in several ways especially its integration of research and instruction The papers in this volume exhibit a large diversity in methods and purposes ranging from historical studies to theoretical examinations of the role of gender in mathematics education to practical evaluations of particular practices and circumstances As in RCME I this volume poses a list of questions to the reader related

to undergraduate mathematics education The eighteen questions were raised at the first Oberwolfach Conference in Undergraduate Mathematics Education which was held in the Fall of 1995 and are related to both research and curriculum This series is published in cooperation with the Mathematical Association of America *Research in Collegiate Mathematics Education. III* Alan H. Schoenfeld, Jim Kaput, Ed Dubinsky, **Research in Collegiate Mathematics Education** Annie Selden, Ed Dubinsky, 2003 **Research in Collegiate Mathematics Education IV** Ed Dubinsky, 2000 This fourth volume of Research in Collegiate Mathematics Education RCME IV reflects the themes of student learning and calculus Included are overviews of calculus reform in France and in the U S and large scale and small scale longitudinal comparisons of students enrolled in first year reform courses and in traditional courses The work continues with detailed studies relating students understanding of calculus and associated topics Direct focus is then placed on instruction and student comprehension of courses other than calculus namely abstract algebra and number theory The volume concludes with a study of a concept that overlaps the areas of focus quantifiers The book clearly reflects the trend towards a growing community of researchers who systematically gather and distill data regarding collegiate mathematics teaching and learning This series is published in cooperation with the Mathematical Association of America *Research in Collegiate Mathematics Education VII* Fernando Hitt, Derek Allan Holton, Patrick W. Thompson, 2010-03-05 The present volume of Research in Collegiate Mathematics Education like previous volumes in this series reflects the importance of research in mathematics education at the collegiate level The editors in this series encourage communication between mathematicians and mathematics educators and as pointed out by the International Commission of Mathematics Instruction ICMI much more work is needed in concert with these two groups Indeed editors of RCME are aware of this need and the articles published in this series are in line with that goal Nine papers constitute this volume The first two examine problems students experience when converting a representation from one particular system of representations to another The next three papers investigate students learning about proofs In the next two papers the focus is instructor knowledge for teaching calculus The final two papers in the volume address the nature of conception in mathematics Whether they are specialists in education or mathematicians interested in finding out about the field readers will obtain new insights about teaching and learning and will take away ideas that they can use *Research in Collegiate Mathematics Education IV* Ed Dubinsky, Alan H. Schoenfeld, James J. Kaput, This collection of essays focuses on student learning of mathematics primarily calculus but also looks at student understanding of abstract algebra and number theory Two of the chapters explore through overviews differing learning and teaching techniques of France and the United States especially as they pertain to calculus reform Other articles explore why students have difficulty applying their knowledge to solving non routine problems the lasting effects of the integrated use of graphing technologies in precalculus and visual confusion in permutation representations Annotation copyrighted by Book News Inc Portland OR **Research in Collegiate Mathematics Education** Ed Dubinsky, Alan H. Making the Connection Marilyn Paula Carlson,Chris Rasmussen,2008 The chapters in this volume convey insights from mathematics education research that have direct implications for anyone interested in improving teaching and learning in undergraduate mathematics This synthesis of research on learning and teaching mathematics provides relevant information for any math department or individual faculty member who is working to improve introductory proof courses the longitudinal coherence of precalculus through differential equations students mathematical thinking and problem solving abilities and students understanding of fundamental ideas such as variable and rate of change Other chapters include information about programs that have been successful in supporting students continued study of mathematics The authors provide many examples and ideas to help the reader infuse the knowledge from mathematics education research into mathematics teaching practice University mathematicians and community college faculty spend much of their time engaged in work to improve their teaching Frequently they are left to their own experiences and informal conversations with colleagues to develop new approaches to

support student learning and their continuation in mathematics Over the past 30 years research in undergraduate mathematics education has produced knowledge about the development of mathematical understandings and models for supporting students mathematical learning Currently very little of this knowledge is affecting teaching practice We hope that this volume will open a meaningful dialogue between researchers and practitioners toward the goal of realizing improvements in undergraduate mathematics curriculum and instruction

The Teaching and Learning of Mathematics at University Level Derek Holton, 2006-04-11 This book is the final report of the ICMI study on the Teaching and Learning of Mathematics at University Level As such it is one of a number of such studies that ICMI has commissioned The other Study Volumes cover assessment in mathematics education gender equity research in mathematics education the teaching of geometry and history in mathematics education All of these Study Volumes represent a statement of the state of the art in their respective areas We hope that this is also the case for the current Study Volume The current study on university level mathematics was commissioned for essentially four reasons First universities world wide are accepting a much larger and more diverse group of students than has been the case Consequently universities have begun to adopt a role more like that of the school system and less like the elite institutions of the past As a result the educational and pedagogical issues facing universities have changed Second although university student numbers have increased significantly there has not been a corresponding increase in the number of mathematics majors Hence mathematics departments have to be more aware of their students needs in order to retain the students they have and to attract future students As part of this awareness departments of mathematics have to take the teaching and learning of mathematics more seriously than perhaps they have in the past
