Rutherford Simple Genius:

Rutherford David Wilson, 1983 *Leven en werk van de Engelse natuurkundige Ernest Rutherford 1871 1937* *Making "Nature"* Melinda Baldwin, 2015-08-18 *Making Nature* is the first book to chronicle the foundation and development of *Nature* one of the world's most influential scientific institutions. Now nearing its hundred and fiftieth year of publication, *Nature* is the international benchmark for scientific publication. Its contributors include Charles Darwin, Ernest Rutherford, and Stephen Hawking, and it has published many of the most important discoveries in the history of science, including articles on the structure of DNA, the discovery of the neutron, the first cloning of a mammal, and the human genome. But how did *Nature* become such an essential institution? In *Making Nature*, Melinda Baldwin charts the rich history of this extraordinary publication from its foundation in 1869 to current debates about online publishing and open access. This pioneering study not only tells *Nature's* story but also sheds light on much larger questions about the history of science, publishing, changes in scientific communication, and shifting notions of scientific community. *Nature*, as Baldwin demonstrates, helped define what science is and what it means to be a scientist. **A History of Science in Society** Andrew Ede, Lesley B.

Cormack, 2012-01-01 This bestselling book traces the history of science through its continually changing place in society and explores the links between the pursuit of knowledge and the desire to make that knowledge useful. **Can Scientists**

Believe Sir Nevill Mott, 2013-11-05 In this collection of thought-provoking essays, a range of distinguished scientists and theologians, men and women, young and old, all with strong scientific training and deeply held religious beliefs in the Judeo-Christian tradition, give their personal answers. They do not always agree, the views of each contributor being informed both by their particular scientific expertise and religious affiliation. They address a wide range of problems that will interest all concerned to reconcile their own religious beliefs with currently accepted scientific theory and practice. The divergences of opinion are as significant as the agreements. Positions are thoughtfully explained and make important, often novel, and illuminating contributions to debate on these great issues. Action Learning in Practice Mike Pedler, 2016-03-23

Previous editions of *Action Learning in Practice* established this authoritative overview of action learning around the world. Over the last decade, the move towards action-based organizational learning and development has accelerated, and action learning is now an established part of the education and development mainstream in large and small organizations. Fully revised and updated, this fourth edition covers the origins of action learning with Reg Revans' ideas and looks at their development and application today. Action learning is self-directed learning through tackling business and work problems with the support of peers and colleagues. A professional and diverse workforce, attracted, influenced, and developed in this way, is more able to deal effectively with the growing complexity and pressures of working life. As the limits of conventional training and development become more obvious, leaders are increasingly attracted to action-based approaches to learning when seeking better outcomes and returns on investment. **Nature's Clocks** J. D. Macdougall, 2008 A lucid and engaging account of the

scientific revolution that changed the way we think about our planet and ourselves James Lawrence Powell author of Grand Canyon and Mysteries of Terra Firma The Curies Denis Brian,2008-04-21 Focusing on the lives and relationships behind their magnificent careers The Curies is the first biography to trace the entire Curie dynasty from Pierre and Marie's fruitful union and achievements to the lives and accomplishments of their two daughters Irène and Eve and son-in-law Frederic Joliot Curie Biographer Denis Brian digs deep beneath the headlines and legends to reveal the Curies multigenerational saga in its entirety featuring new never before published personal information as well as newly revealed correspondence and diary excerpts Brimming with endearing and often amusing anecdotes about this much misunderstood clan The Curies reveals a family as closely intertwined in their private lives as they were in their professional endeavors The Biographical Dictionary of Women in Science Marilyn Ogilvie,Joy Harvey,2003-12-16 Edited by two of the most respected scholars in the field this milestone reference combines facts fronted fast access to biographical details with highly readable accounts and analyses of nearly 3000 scientists lives works and accomplishments For all academic and public libraries science and women's studies collections **The Neutron and the Bomb: A Biography of Sir James Chadwick** Andrew Brown,2019-08-15 James Chadwick 1891-1974 came from a humble background his father was a cotton spinner He was accepted in the physics department of Sir Ernest Rutherford at Manchester University in 1908 on a scholarship and soon started publishing new findings about radioactivity This led to a traveling scholarship to Berlin where he made the important discovery of the continuous spectrum of particles When the World War I broke out Chadwick was interned by the Germans as an enemy alien for the next four years but continued experiments in the prison camp On his return to England in broken health Rutherford invited Chadwick to join the Cavendish Laboratory in Cambridge where he became Rutherford's deputy and oversaw much groundbreaking physics research over the next 15 years Chadwick concentrated on finding evidence for the neutron an uncharged nuclear particle whose existence was first proposed by Rutherford in 1920 Having noticed anomalous results from the Curie laboratory in Paris in 1932 Chadwick used simple bench top apparatus to convince himself after weeks of intense observations that he had definite evidence for the existence of the neutron The Nobel Prize for physics followed in 1935 that year he moved to Liverpool University to head his own department At the outbreak of World War II the feasibility of atomic bombs of unprecedented explosive power was already being discussed Chadwick drafted the British MAUD committee's historic reports in the summer of 1941 which concluded that atomic bombs were indeed feasible with sufficient industrial capacity In wartime Britain this was impossible but in 1943 Chadwick moved to the US as head of the British scientists working on the Manhattan Project He formed an unlikely alliance with its leader General Leslie Groves and became an adroit scientist diplomat Witnessing the first explosion of a plutonium fueled device at the Trinity Test shattered him Chadwick believed that dropping atomic bombs on Japanese cities was justified but the development of nuclear weapons as an unintended consequence of his discovery of the neutron caused him deep personal anguish Until this excellent book by

Andrew Brown Chadwick has remained the most shadowy of the atomic scientists who for better or worse gave the human species mastery over nuclear energy Nigel Calder New Scientist Andrew Brown's biography beautifully reveals Chadwick's scientific diplomatic and personal achievements Roger H Stuewer Physics Today I can warmly recommend this book to all interested in the life of a remarkable scientist who played a crucial role in a formative period of the modern world Hermann Bondi Times Higher Education Supplement This is the biography of a physicist who made one of the most important discoveries in nuclear physics but retained to his old age the shyness of a young lad Andrew Brown takes us through Chadwick's life as an adventure I found it a very good read Hans Bethe American Journal of Physics The tale of so sterling a character even when told as well as in this book may be a little short on light moments but any reader interested in the evolution of physics from an academic passion to a leading role on the world stage will find it a fascinating story and a worthy tribute to a great scientist Brian Pippard Nature makes absorbing reading more than the life story of a remarkable man unfolds the tremendous transformation that science underwent in the 20th century Joseph Rotblat avidly researched and artfully written This biography blends elegantly direct scientific descriptions with often witty episodes and character summaries William Lanouette Bulletin of the Atomic Scientists

Nobel Laureates and Twentieth-Century Physics
 Mauro Dardo, 2004-10-14 In this richly illustrated 2004 book the author combines history with real science Using an original approach he presents the major achievements of twentieth century physics for example relativity quantum mechanics atomic and nuclear physics the invention of the transistor and the laser superconductivity binary pulsars and the Bose Einstein condensate each as they emerged as the product of the genius of those physicists whose labours since 1901 have been crowned with a Nobel Prize Here in the form of a year by year chronicle biographies and revealing personal anecdotes help bring to life the main events of the past hundred years The work of the most famous physicists of the twentieth century great names like the Curies Bohr Heisenberg Einstein Fermi Feynman Gell Mann Rutherford and Schrödinger is presented often in the words and imagery of the prize winners themselves
