Let Lonely Planet take you further than ever before with the world's first and only travel guide to the Universe. Developed with the latest data from NASA, we take you from our home on Earth and out into the far reaches of the solar system, then into our neighbouring stars and planetary systems, and finally into the rest of our galaxy and the Universe. This fascinating journey will help you explore space as you would the world with a Lonely Planet guide. Unique to these pages are wonderful comparisons of Earth with the other worlds of our solar system and even those exoplanets orbiting other stars. You'll discover as much as we know about our celestial neighbourhood and our place in it. In addition to planets and moons, get to know our Sun, explore the asteroid belt and the Kuiper Belt, and learn what lies beyond in interstellar space. Outside our solar system, travel to some of the notable neighbouring stars, stellar systems, and exoplanets we've discovered. You'll understand how we search for planets where life might exist and the stars they orbit. Finally, discover the edge of the observable Universe. Get to know the structure of the Milky Way as well as an orientation to neighbouring galaxies like the Andromeda Galaxy, which is visible from Earth. Then explore other galactic formations and learn about galactic clusters and superclusters. By the end of the book, you'll have a sense for the structure of the entire Universe as well as some of the big questions we still have as we ponder our place in it.

Written by Philip Briggs, the world's foremost guidebook writer on Africa, this new tenth edition of the most detailed travel guidebook available to Uganda has been thoroughly updated by local resident and experienced travel writer Andrew Roberts. Uganda excels for wildlife watching, and recent transport improvements now make for relatively easy year-round access to key sites. Visit the lush montane forests of Bwindi, which protect one of the world's largest remaining populations of mountain gorillas; watch habituated chimpanzees in Kibale; and tree-climbing lions in Queen Elizabeth National Park, or enjoy outstanding birdwatching throughout with more than a thousand bird species in a country similar in size to Great Britain. As well as treating readers to a dedicated wildlife chapter with over 100 colour wildlife photographs, Bradt's Uganda guides visitors around key wildlife watching experiences. It

Flowers of the Moon Sebastian Schutyser, 2008-10-01. The first sighting of the Rwenzori Mountain Range by non-Africans was made by Sir Henry Morton Stanley in 1876. Previous to his well-documented report, there were only rumours about these mountains on the border of present Uganda and the Congo, which feed the waters of the Nile. The Greek astronomer Ptolemy referred to them as Mountains of the Moon, a name still used today. The Rwenzori are well known for their extravagant plants. Most stunning are the giant heathers, senecios, and lobelias. Though the flora is similar to that of other higher African mountain ranges, it is much more luxuriant and is characterised by unusually giant plants. This environment has an aesthetic and almost mystical effect on those who dare to intrude. In this book, photographer Sebastian Schutyser focuses on the aesthetic qualities of the Rwenzori Mountains in general and of the Afroalpine vegetation in particular. By doing so, he also explores the boundaries of documentary photography. The use of infrared photography.
