Semigroups Theory And Applications Volume I:

    Semigroups of Operators: Theory and Applications A.V. Balakrishnan,2012-12-06 These Proceedings comprise the bulk of the papers presented at the Inter national Conference on Semigroups of Opemtors Theory and Contro held 14 18 December 1998 Newport Beach California U S A The intent of the Conference was to highlight recent advances in the the ory of Semigroups of Operators which provides the abstract framework for the time domain solutions of time invariant boundary value initial value problems of partial differential equations There is of course a firewall between the ab stract theory and the applications and one of the Conference aims was to bring together both in the hope that it may be of value to both communities In these days when all scientific activity is judged by its value on dot com it is not surprising that mathematical analysis that holds no promise of an immediate commercial product line or even a software tool box is not high in research priority We are particularly pleased therefore that the National Science Foundation provided generous financial support without which this Conference would have been impossible to organize Our special thanks to Dr Kishan Baheti Program Manager   <u>Neutrosophic Theory and Its Applications, Vol. I</u> Florentin Smarandache,2014-12-01 This volume contains 45 papers written by the author alone or in collaboration with the following co authors Mumtaz Ali Said Broumi Sukanto Bhattacharya Mamoni Dhar Irfan Deli Mincong Deng Alexandru Gal Valeri Kroumov Pabitra Kumar Maji Maikel Leyva Vazquez Feng Liu Pinaki Majumdar Munazza Naz Karina Perez Teruel R dvan Sahin A A Salama Muhammad Shabir Rajshekhar Sunderraman Luige Vladareanu Magdalena Vladila Stefan Vladutescu Haibin Wang Hongnian Yu Yan Qing Zhang

    A Method for Computing Unsteady Flows in Porous Media R Raghavan,2017-11-22 Self contained and concise this Research Note provides a basis to study unsteady flow in saturated porous media It provides for the development of algorithms that examine three dimensional flows subject to complicated boundary conditions that are a natural consequence of flow in geological systems A new way to understand the flow in porous media is presented The authors pay attention to computational considerations and options for developing codes are addressed The note consists of five chapters the first is introductory the second and third are devoted to showing how one arrives at the solutions of interest the fourth chapter presents various reformulations to aid computations and presents a few illustrative examples the fifth chapter is a natural progression of the first four chapters to more complicated visualizations of flow in porous media   *Localization and Sheaves* Jara Pascual,Conchi Vidal,A Verschoren,1995-11-30 This book completely solves the problem of representing rings and modules over them which are locally noetherian over subsets of their prime spectrum by structure sheaves over this subset In order to realise this one has to develop the necessary localization theory as well as to study local equivalents of familiar concepts like the Artin Rees property Ore sets and the second layer condition The first part of the book is introductory and self contained and might serve as a starting course at graduate level on localization theory within Grothendieck categories The second part is more specialised and provides the basic machinery needed to effectively these

structure sheaves as well as to study their functorial behaviour In this way the book should be viewed as a first introduction to what should be called relative noncommutative algebraic geometry **Harmonic Maps Into Homogeneous Spaces** Malcolm Black,2018-05-04 Harmonic maps and the related theory of minimal surfaces are variational problems of long standing in differential geometry Many important advances have been made in understanding harmonic maps of Riemann surfaces into symmetric spaces In particular twistor methods construct some and in certain cases all such mappings from holomorphic data These notes develop techniques applicable to more general homogeneous manifolds in particular a very general twistor result is proved When applied to flag manifolds this wider viewpoint allows many of the previously unrelated twistor results for symmetric spaces to be brought into a unified framework These methods also enable a classification of harmonic maps into full flag manifolds to be established and new examples are constructed The techniques used are mostly a blend of the theory of compact Lie groups and complex differential geometry This book should be of interest to mathematicians with experience in differential geometry and to theoretical physicists Computational Methods for Fluid-Structure Interaction Jean-Marie Crolet,Roger Ohayon,1994-04-05 Fluid structure interaction is a new theme of investigation in computational methods covering many applications in both engineering and medical sciences This book deals with various examples of interaction between a fluid and a structure and each author presents for the different problems involved the method which is considered to be the most appropriate Solution Sets of Differential Equations in Abstract Spaces Robert Dragoni,Paolo Nistri,Pietro Zecca,Jack W Macki,1996-04-03 This book presents results on the geometric topological structure of the solution set S of an initial value problem x t f t x t x 0 xo when f is a continuous function with values in an infinite dimensional space A comprehensive survey of existence results and the properties of S e g when S is a connected set a retract an acyclic set is presented The authors also survey results onthe properties of S for initial value problems involving differential inclusions and for boundary value problems This book will be of particular interest to researchers in ordinary and partial differential equations and some workers in control theory **Numerical Methods in Mechanics** Carlos Conca,Gabriel N Gatica,1997-07-16 This volume contains the invited papers given at the Fourth French Latin American Congress on Applied Mathematics New numerical techniques in fluid and solid mechanics were presented Singularities of Solutions of Second-Order Quasilinear Equations Laurent Veron,1996-08-01 This text examines the singularity problem for solutions of elliptic and parabolic quasilinear equations of second order **Integral Methods in Science and Engineering** Christian Constanda,Jukka Saranen,S Seikkala,2020-01-16 Based on proceedings of the International Conference on Integral Methods in Science and Engineering this collection of papers addresses the solution of mathematical problems by integral methods in conjunction with approximation schemes from various physical domains Topics and applications include wavelet expansions reaction diffusion systems variational methods fracture theory boundary value problems at resonance micromechanics fluid mechanics combustion problems nonlinear problems elasticity theory and

plates and shells Volume 1 covers Analytic Methods **Progress in Holomorphic Dynamics** Hartje Kriete,1998-05-20 In the last few decades complex dynamical systems have received widespread public attention and emerged as one of the most active fields of mathematical research Starting where other monographs in the subject end Progress in Holomorphic Dynamics advances the theoretical aspects and recent results in complex dynamical systems with particular emphasis on Siegel discs Organized into four parts the papers in this volume grew out of three workshops two hosted by the Georg August Universit t G ttingen and one at the Mathematisches Forschungsinstitut Oberwolfach Part I addresses linearization The authors review Yoccoz s proof that the Brjuno condition is the optimal condition for linearizability of indifferent fixed points and offer a treatment of Perez Marco s refinement of Yoccoz s work Part II discusses the conditions necessary for the boundary of a Siegel disc to contain a critical point builds upon Herman s work and offers a survey of the state of the art regarding the boundaries of Siegel discs Part III deals with the topology of Julia sets with Siegel discs and contains a remarkable highlight C L Petersen establishes the existence of Siegel discs of quadratic polynomials with a locally connected boundary Keller taking a different approach explains the relations between locally connected real Julia sets with Siegel discs and the abstract concepts of kneading sequences and itineraries Part IV closes the volume with four papers that review the different directions of present research in iteration theory It includes discussions on the relations between commuting rational functions and their Julia sets interactions between the iteration of polynomials and the iteration theory of entire transcendental functions a deep analysis of the topology of the limbs of the Mandelbrot set and an overview of complex dynamics in higher dimensions *Recent Advances in Differential Equations* H-H Dai,P.L. Sachdev,2020-01-30 The First Pan China Conference on Differential Equations was held in Kunming China in June of 1997 Researchers from around the world attended including representatives from the US Canada and the Netherlands but the majority of the speakers hailed from China and Hong Kong This volume contains the plenary lectures and invited talks presented at that conference and provides an excellent view of the research on differential equations being carried out in China Most of the subjects addressed arose from actual applications and cover ordinary and partial differential equations Topics include **Integral Expansions Related to Mehler-Fock Type Transforms** B N Mandal,Nanigopal Mandal,2020-11-25 An important class of integral expansions generated by Sturm Liouville theory involving spherical harmonics is commonly known as Mehler Fock integral transforms In this book a number of integral expansions of such type have been established rigorously As applications integral expansions of some simple function are also obtained **Progress in Partial Differential Equations** Herbert Amann,C Bandle,Michel Chipot,F Conrad,I Shafrir,1998-04-01 The numerous applications of partial differential equations to problems in physics mechanics and engineering keep the subject an extremely active and vital area of research With the number of researchers working in the field advances large and small come frequently Therefore it is essential that mathematicians working in partial differential equations and applied mathematics keep abreast of new developments
