revised a number of chapters in Part 1 the general part of the monograph mainly those devoted to chromatographic methods which have been extended and complemented by methods of thin layer chromatography and electrophoresis The chapters on the theory of color reactions and on analytical literature have also been extended the chapter on spectral methods has been extended by including the use of proton magnetic resonance in organic analysis and the list of references has been enlarged by adding books of importance for organic analysis In Part 2 the part dealing specifically with various elements and chemical groups we have extended the chapters on solubility and on acids and bases The methods for the detection and identification of given classes of compounds have also been supplemented by references to recent papers *Catalog of Copyright Entries.
