

SENSATION (PSYCHOLOGY)

In psychology, sensation refers to the unique process of how people receive information through their senses, which include touch, taste, smell, sight, and hearing.

DEFINITION

According to Sanderson and Huffman:

"Sensation is the process by which we detect and convert (transduce) raw sensory data from our body and the environment, and then transmit it to our brain" (2023, p. 174).

The process of sensation in psychology includes identifying, communicating, and interpreting stimuli from our surroundings.

EXAMPLES

- **Feeling the sun on our skin:** Our skin receptors can detect heat from the sun and send a signal to the brain, which helps us feel the sensation of warmth on our skin.
- **Tasting our favorite food:** Our tongue's taste buds can detect different flavors - sweet, sour, salty, or bitter - and send this information to the brain for us to experience the taste.

Sensation The:

Sensation, the Intuitive System, and Designed Experience Qing Archer Zhang, James Paul Gee, 2023-10-08 This groundbreaking book redefines human learning by placing sensation and experience at its core. The book delves into the essence of what it means to be human and how humans best learn and flourish. Drawing on insights from evolutionary biology, neuroscience, learning science, and the arts, the authors weave together a rich tapestry of ideas that challenge traditional approaches to education. The authors argue that school and educational research often ignore fundamental aspects of human learning such as empathy, intuition, and balance. By examining what experience really means when we say humans learn from experience, the authors propose a more holistic approach to education, much of which goes on outside school that goes beyond talk, texts, and analytical reasoning. With examples from various media, particularly the wildly popular Japanese anime series *Attack on Titan*, the authors treat good teaching as experience design and show how experience can be a powerful force for learning and human flourishing. As our world faces unprecedented challenges and crises, this timely book serves as a clarion call for a transformative approach to teaching and learning that respects the nature of humans as distinctive sorts of creatures, urging us to create environments that nurture the full spectrum of human capacities.

Sensation in the Pelvic Region Jean Jacques Wyndaele, 2022-11-18 This book covers sensation in all major components of the pelvic region. The small pelvis is containing many different structures and viscera, and sensations elicited there are important for regulating a normal daily life and for warning that something is going wrong. The sensory system is driving in many aspects the motor activity and precedes and guides the efferent functions. It is surprising that in the last 60 years the ratio between research and publications about sensory versus motor has gradually become less. There has been undoubtedly a rise in the number of publications written on pelvic sensation, but in the same time the number of manuscripts on motor function have increased more. It is the hope that this compilation of most data available on sensation will be of interest for the reader, will incite to perform more research, so that an important part of pelvic functional diagnosis and treatment modalities will use the whole of the mechanisms available. The book is intended for all interested in pelvic functions and the interactions between the different structures: specialists in urology, gastroenterology, sexuality, pain, pelvic floor function, and dysfunction, paediatricians, and geriatricians, neurologists, students, and those in training. The reader will find interesting and challenging information and suggestions for further research.
