

An approach to environmental perception/cognition and place-making

Many cities have symbols (e.g., historic events, religious sites, and other cultural associations). These symbols can be developed over time to become local symbols (e.g., the Statue of Liberty, the Statue of the Republic, the Eiffel Tower) or natural features (e.g., Mt. Fuji) should be used to reinforce local identity. Smaller communities must cultivate and/or create local symbolism and intangible cultural heritage. Event planning is a viable technique for developing local sense of place and community.

(Anticipated)

The five components of a place's recognizability are districts, boundaries, paths, landmarks and nodes. In compact communities, these elements are closely related and districts should have clearly recognized geographical "boundaries" and meaningful placements. Paths should be both functional and aesthetically pleasing. Landmarks should relate to local heritage and culture, be visible, or actively contain, should contribute to sense of place, and be aesthetically pleasing. Nodes should be at corporate (probable) identity, and branding should be visible as a necessary element for community identity.

A characteristic of the environment is a key element in place-making. Orientation is an individual's assessment of their location within the environment. Orientation is a process that requires the perception of the distinction of internal and external space. Wayfinding guides individuals through the environment, and navigability is the ease or friction of movement within the environment. Orientation, wayfinding, and navigability information (e.g. looking) assist in environmental legibility. Symbols and colors are preferable to text as they are more easily remembered and recalled. The environment should be designed to be legible. The story that it is easily recognized, understood and shared. Characteristics and features should be designed to provide the setting for the story.

The physical quality of the environment should include aesthetic design, color psychology and spatial animation. Acoustics should consider both controlling and augmenting artificial (i.e. music) and natural (i.e. water) ambient sound. Playing features and street furniture should provide a variety of soundscapes. Street lighting should consider color, glare and artificial skyglow (i.e. bakery) should be considered. Outdoor dining and street food-vending provide for the sense of taste.
