Optical Radiometry and Satellite Validation Agnieszka Bialek, David Doxaran, Vittorio Ernesto Brando, Clemence Goyens, Kevin Ruddick, Ana Ines Dogliotti, 2025-08-26 Strict quality control is essential to ensure that the satellite data products routinely used for environmental monitoring of water and land surfaces are fit for purpose A crucial step in this process is the validation of the water and land surface reflectances from which the final end user products are derived The topic of radiometric validation is growing rapidly in importance both because of the advent of operational satellite missions for routine environmental monitoring and because of the rapid expansion in the number of satellite missions including CubeSat constellations with limited cal val resources This enhanced need for radiometric validation data covering a wide VIS NIR SWIR range e g 380 2400nm preferably with a hyperspectral resolution must be met by new techniques and hardware particularly ground based automated radiometry

Ecological Bulletins, Targets and Tools for the Maintenance of Forest Biodiversity Per Angelstam, Monica Donz-Breuss, Jean-Michel Roberge, 2009-05-06 Maintaining forest biodiversity by combining protection management and restoration of forest and woodland landscapes is a central component of sustainable development Evidence that there are threshold levels for how much habitat loss may be tolerated for viable populations of specialised species to be maintained Policy makers businesses and managers pose questions about how to balance use of renewable forest resources and conserve biodiversity Examples are presented on how biodiversity assessments can be made Proposes how the critical gaps in our knowledge identified throughout the book could be filled through macroecological research and international co operation

The Future of Hyperspectral Imaging Stefano Selci,2019-11-20 This book includes some very recent applications and the newest emerging trends of hyper spectral imaging HSI HSI is a very recent and strange beast a sort of a melting pot of previous techniques and scientific interests merging and concentrating the efforts of physicists chemists botanists biologists and physicians to mention just a few as well as experts in data crunching and statistical elaboration For almost a century scientific observation from looking to planets and stars down to our own cells and below could be divided into two main categories analyzing objects on the basis of their physical dimension recording size position weight etc and their variations or on how the object emits reflects or absorbs part of the electromagnetic spectrum i e spectroscopy While the two aspects have been obviously entangled instruments and skills have always been clearly distinct from each other With HSI now available this is no longer the case This instrument can return specimen dimensionalities and spectroscopic properties to any single pixel of your specimen in a single set of data HSI modality is ubiquitous and scale invariant enough to be used to mark terrestrial resources on the basis of a land map obtained from satellite observation actually the oldest application of this type or to understand if the cell you are looking at is cancerous or perfectly healthy For all these reasons HSI represents one of the most exciting methodologies of the new millennium
