## **Sensors Update 8:**

*Fundamentals of Microfabrication* Marc J. Madou, 2018-10-08 MEMS technology and applications have grown at a tremendous pace while structural dimensions have grown smaller and smaller reaching down even to the molecular level. With this movement have come new types of applications and rapid advances in the technologies and techniques needed to fabricate the increasingly miniature devices that are literally changing our world. A bestseller in its first edition, *Fundamentals of Microfabrication* Second Edition reflects the many developments in methods, materials, and applications that have emerged recently. Renowned author Marc Madou has added exercise sets to each chapter thus answering the need for a textbook in this field. *Fundamentals of Microfabrication* Second Edition offers unique in-depth coverage of the science of miniaturization, its methods and materials. From the fundamentals of lithography through bonding and packaging to quantum structures and molecular engineering, it provides the background tools and directions you need to confidently choose fabrication methods and materials for a particular miniaturization problem. New in the Second Edition Revised chapters that reflect the many recent advances in the field. Updated and enhanced discussions of topics including DNA arrays, microfluidics, micromolding techniques, and nanotechnology. In-depth coverage of bio-MEMS, RF-MEMS, high-temperature, and optical MEMS. Many more links to the Web. Problem sets in each chapter.

**Sensor Networks** Gianluigi Ferrari, 2010-03-10

The idea of this book comes from the observation that sensor networks represent a topic of interest from both theoretical and practical perspectives. The title and lines that sensor networks offer the unique opportunity of clearly linking theory with practice. In fact owing to their typical low cost academic researchers have the opportunity of implementing sensor network testbeds to check the validity of their theories algorithms protocols etc in reality. Likewise a practitioner has the opportunity of understanding what are the principles behind the sensor networks under use and thus how to properly tune some accessible network parameters to improve the performance. On the basis of the observations above the book has been structured in three parts:

Part I is denoted as Theory since the topics of its five chapters are apparently detached from real scenarios. Part II is denoted as Theory and Practice since the topics of its three chapters although theoretical have a clear connection with specific practical scenarios. Part III is denoted as Practice since the topics of its five chapters are clearly related to practical applications.
