Biology of Sensory Systems C. U. M. Smith, 2008-11-20 Since publication of the first edition huge developments have taken place in sensory biology research and new insights have been provided in particular by molecular biology These show the similarities in the molecular architecture and in the physiology of sensory cells across species and across sensory modality and often indicate a common ancestry dating back over half a billion years Biology of Sensory Systems has thus been completely revised and takes a molecular evolutionary and comparative approach providing an overview of sensory systems in vertebrates invertebrates and prokaryotes with a strong focus on human senses Written by a renowned author with extensive teaching experience the book covers in six parts the general features of sensory systems the mechanosenses the chemosenses the senses which detect electromagnetic radiation other sensory systems including pain thermosensitivity

and some of the minority senses and finally provides an outline and discussion of philosophical implications New in this edition Greater emphasis on molecular biology and intracellular mechanisms New chapter on genomics and sensory systems Sections on TRP channels synaptic transmission evolution of nervous systems arachnid mechanosensitive sensilla and photoreceptors electroreception in the Monotremata language and the FOXP2 gene mirror neurons and the molecular biology of pain Updated passages on human olfaction and gustation Over four hundred illustrations boxes containing supplementary material and self assessment questions and a full bibliography at the end of each part make *Biology of Sensory Systems* essential reading for undergraduate students of biology zoology animal physiology neuroscience anatomy and physiological psychology The book is also suitable for postgraduate students in more specialised courses such as vision sciences optometry neurophysiology neuropathology developmental biology Praise from the reviews of the first edition An excellent advanced undergraduate postgraduate textbook ASLIB BOOK GUIDE The emphasis on comparative biology and evolution is one of the distinguishing features of this self contained book this is an informative and thought provoking text TIMES HIGHER EDUCATIONAL SUPPLEMENT **Entomological Revue** ,2003 Sensory Systems of Animals Mark Hollins,2024-10-10 Perception in animals is a fascinating and challenging subject that calls to students from many disciplines The aim of this book is to provide a knowledge base and unifying perspective on the field that will enable beginning researchers to chart their own course within it The author describes in a systematic but engaging way the sensory systems of humans and other vertebrates as well as arthropods and molluscs Why is it important to understand the senses of animals One reason is that human activities are changing the perceptual world of animals in ways that expose them to danger From bright outdoor lighting disorienting migrating birds to human sonar driving whales to beach themselves it is becoming increasingly important to find ways to reduce such dangers This will require big changes in human behavior and greater understanding of how animals react physiologically and behaviorally to anthropogenic changes in their environment The emphasis throughout is on research in both the behavioral ethological and neuroscientific traditions that has led to important discoveries The functional anatomy of each system from receptor cells to brain areas is succinctly described explaining how it underlies the animal s sensory abilities and behavior Overall descriptions of a sense for a class of animals for example hearing in arachnids are interspersed with expanded coverage of that sense in a particular animal such as the ocre faced web casting spider that does a backflip to capture an insect buzzing overhead Evolutionary themes are found throughout the book for example in describing the development of the vertebrate ear and in the convergent evolution of the eyes of vertebrates and cephalopods With over 500 references and 80 illustrations this textbook is primary reading intended for advanced undergraduates and beginning graduate students of veterinary science lab animal science and zoology It would also be of great interest to professionals and academics working with animals such as veterinary professionals and zookeepers Sociobiology ,2004 **African Entomology** ,2003 **Memorabilia Zoologica** ,1994 *Catalogue of the*

Cicadoidea (Hemiptera: Auchenorrhyncha) Allen F. Sanborn, 2013-11-14 This is the third in a series of catalogs and bibliographies of the Cicadoidea covering 1981-2010. The work summarizes the cicada literature providing a means for easy access to information previously published on a particular species or to allow researchers the ability to locate similar work that has been published on other species. A total of 2,591 references are included in the bibliography. The book is a source of biological and systematic information that could be used by zoologists, entomologists, individuals interested in crop protection and students studying entomology as well as anyone interested in cicadas or who require specific information on the insects. Each genus/species is identified with the reference, the page number, any figures if applicable, the topics covered by the reference, any synonymies, and any biogeographic information mentioned for the species in the individual reference. An added benefit to the catalog is that it is the first complete species list for the Cicadoidea including all synonymies and new combinations through 2012. Provides nearly four times the number of references of the previous catalog, demonstrating the explosion of data since that time. Contains all references found that mention a genus or species name in the work. Includes more than 300 additional references that were not in the two previous works on this subject. Features the first complete species list for the Cicadoidea including all synonymies.
