death from disease Decisions regarding elective and therapeutic management of cervical lymph node metastases are made mainly on clinical grounds as we cannot always predict cervical lymph node metastasis from the size and extent of invasion of the primary tumors Therefore the treatment of the neck disease in the management of SCCOC remains controversial The promise of using biomarker based treatment decisions has yet to be fully realized due to our poor understanding of the mechanisms of regional and distant metastases of SCCOC We will summarize the current status of investigations into SCCOC metastases and potential of these studies to impact basic research investigators and clinicians confronting SCCOC in the future Clinical Lymphatic Mapping of Gynecologic Cancer Charles Levenback,Ate G.J. van der Zee,Robert L.

**Primary Targets** Sean McKeever, 2007-01-01 When Juston Seyfert rebuilds a destroyed 30 foot tall robot that he finds at the salvage yard he soon discovers that it is a mutant hunting weapon of destruction **Oncoplastic Breast**

**Surgery** Florian Fitzal, Peter Schrenk, 2010-05-06 The initial idea to write a book on oncoplastic techniques was raised through a meeting on breast cancer treatment in Saalfelden A tria two years ago Contrary to the rather minor role breast surgery is conceded today compared to other treatment modalities the s geons role on the further outcome of the disease is crucial and never compensated by radiation or adjuvant therapy Whereas surgery a decade ago was merely excision of the cancer and closure of the wound leaving behind a mutilated breast in many women the advent of oncoplastic surgery

completely changed the modern surgical approach to breast cancer. The concept of oncoplastic breast surgery combines oncologic resection either breast conservation or mastectomy with traditional or less traditional plastic surgical techniques. The primary goal is to achieve an optimal cosmetic result with long time local tumor control. Some non-randomized studies available in patients following breast conservation oncoplastic surgery showed tumor resection to be associated with wider free margins, less patients needing re-operation surgery for involved or close margins, a widening of the indications for breast conservation surgery, a low complication rate and at least an equal local recurrence rate. There is no doubt that oncoplastic breast surgery experienced a rapid rise with more patients demanding this kind of surgery. However, a profound knowledge of the different oncoplastic techniques is essential for the outcome.
