Influences and Socialization in Infancy S. Feinman,Michael Lewis,2013-06-29 How are we to understand the complex forces that shape human behavior A variety of diverse perspectives drawing on studies of human behavioral ontogeny as well as humanity s evolutionary heritage seem to provide the best likelihood of success It is in an attempt to synthesize such potentially disparate approaches to human development into an integrated whole that we undertake this series on the

genesis of behavior In many respects the incredible burgeoning of research in child development over the last two decades or so seems like a thousand lines of inquiry spreading outward in an incoherent starburst of effort The need exists to provide on an ongoing basis an arena of discourse within which the threads of continuity among those diverse lines of research on human development can be woven into a fabric of meaning and understanding Scientists scholars and those who attempt to translate their efforts into the practical realities of the care and guidance of infants and children are the audience that we seek to reach Each requires the opportunity to see to the degree that our knowledge in given areas permits various aspects of development in a coherent integrated fashion It is hoped that this series which brings together research on infant biology developing infant capacities animal models and impact of social cultural and familial forces on development and the distorted products of such forces under certain circumstances serves these important social and scientific needs

*Blueprint* Robert Plomin, 2019-07-16 A top behavioral geneticist argues DNA inherited from our parents at conception can predict our psychological strengths and weaknesses This modern classic on genetics and nature vs nurture is one of the most direct and unapologetic takes on the topic ever written Boston Review In *Blueprint* behavioral geneticist Robert Plomin describes how the DNA revolution has made DNA personal by giving us the power to predict our psychological strengths and weaknesses from birth A century of genetic research shows that DNA differences inherited from our parents are the consistent lifelong sources of our psychological individuality the blueprint that makes us who we are Plomin reports that genetics explains more about the psychological differences among people than all other factors combined Nature not nurture is what makes us who we are Plomin explores the implications of these findings drawing some provocative conclusions among them that parenting styles don't really affect children's outcomes once genetics is taken into effect This book offers readers a unique insider's view of the exciting synergies that came from combining genetics and psychology

*Poppa Psychology* Vicky Phares, 1999-02-28 Many people seem to be searching for answers to help explain their past understand their current way of being and create a happier more satisfying future It is the current trend to blame mothers for such emotional problems *Poppa Psychology* calls into question this habit of blaming mothers and focuses instead on the father child relationship Regardless of whether the father is present or absent his actions will have a direct influence on the child's development Fathers have received a great deal of media attention lately but the main focus has been on their absence *Poppa Psychology* deals with the psychological ramifications of the father child relationship regardless of whether the fathers are present or absent Specifically it highlights factors that are related to maladjustment in children and provides suggestions for raising psychologically healthy children

*Developmental Psychobiology*  
George F. Michel, Celia L. Moore, 1995 This text is the first to provide a coherent theoretical treatment of the flourishing new field of developmental psychobiology which has arisen in recent years on the crest of exciting advances in evolutionary biology developmental neuroscience and dynamic systems theory Michel and Moore two of the field's key pioneers and researchers integrate primary source information from research in both biological and psychological disciplines in a clear account of the frontier of biopsychological investigation and theorizing Explicitly conceptual and historical the first three chapters set the stage for a clear understanding of the field and its research with particular attention to the nature nurture question The next three chapters each provide information about a basic subfield in biology genetics evolution embryology that is particularly relevant for developmental studies of behavior These are followed by extended treatments of three spheres of inquiry behavioral embryology cognitive neuroscience animal behavior in terms of how a successful interdisciplinary approach to behavioral development might look A final chapter comments on some of the unique aspects of development study From this detailed and clearly organized text students will achieve a firm grasp of some of science's most fertile questions about the relation between evolution and development the relation between brain and cognitive development the value of a natural history approach to animal behavior and what it teaches us about humans and much more Each chapter contains material that questions the conventional wisdom held in many subdisciplines of biology and psychology Throughout the text challenges students to think creatively as it thoroughly grounds them in the field's approach

to such topics as behavioral genetic analysis the concept of innateness molecular genetics and development neuroembryology behavioral embryology maturation cognition and ethology A Bradford Book Parent-child Relations Throughout Life Karl Pillemer, Kathleen McCartney, 2013-09-05 The study of parent child relationships has long been of interest to behavioral scientists both for its theoretical importance and for its practice and policy implications There are however certain limitations to the knowledge in this area First research on parents and children is spread throughout a number of disciplines and as a consequence is not well integrated Further there has been little dialogue among researchers concerned with parents of young children and those interested in middle aged and elderly parents and their offspring The present volume predicates the notion that there is considerable similarity in the issues explored by researchers on different points of the life course Contributions by leading scholars in psychology sociology and anthropology are organized into four sections each of which contains a treatment of at least two stages in the life course The sections cover attachment in early childhood and in later life life course transitions relationships within families and the influence of social structural factors on parent child relations Although the chapters make important contributions to basic research and theory many also deal with issues of public concern such as day care maternal employment gay and lesbian relationships and care of the elderly All Grown Up Celia Dodd, 2022-06-09 When children grow up and become adults we often assume as parents that our job is done In fact it s just the beginning of a whole new stage in our lifelong connection Relationships with adult children are an aspect of parenting that is rarely discussed yet they require thoughtfulness and empathy and can bring many new challenges How can you avoid conflict when your adult child returns to live with you What if you don t get on with their partner How should you support your child through a divorce or mental health challenges later in life Do you have mixed feelings about looking after your grandchildren What if you adult children don t get along All Grown Up draws on the personal experiences of parents as well as advice from leading experts in the field to offer support and guidance on working through these common dilemmas to develop and maintain a close bond with your adult child Discover how to create family harmony and a strong enduring connection **Family Relationships in Middle Childhood** Joanne Coldwell, Alison Pike, Judy Dunn, 2006-07-20 Combining the perspectives of parents and young children aged 4-8 this book explores how family members relate to each other during middle childhood **Parenting Behaviour and Children's Cognitive Development** Sara Meadows, 2013-10-23 The association between parents behaviour and children s cognitive development is at the meeting place of several prominent theories of psychological development and a range of complex methodological and conceptual issues On the one hand there are theories which argue that the impetus of development is within the child and is largely unaffected by his or her experience of social interaction on the other are the commonsense experience of parents and educators and the body of neo Vygotskian theory which would see the child s development as profoundly affected by social interaction or even constituted by it The purpose of this book is to examine theories and evidence carefully in order to assess

the causal links between parent behaviour and children's cognitive development. There is a considerable amount of evidence that suggests an association between parents' behaviour and their children's cognitive development, but there are many possible explanations for this association, including direct effects of parental teaching styles on the children's learning and motivation, differential social class practices and opportunities, genetic resemblances, and methodological artifacts. A close and critical look at a wide range of research and of theory is necessary if the causal questions are to be clarified. This book develops the current arguments about the nature and causes of cognitive development, providing a critical discussion of the available research and relating it to psychological theory. It is suitable for advanced students of psychology and education.

**The Development of Emotion Regulation and Dysregulation** Judy Garber, 1991-05-31. Provides a developmental perspective of the regulation and dysregulation of emotion, in particular how children learn about feelings and how they learn to deal with both positive and negative feelings. Emotion regulation involves the interaction of physical, behavioral, and cognitive processes in response to changes in one's emotional state. The changes can be brought on by factors internal to the individual (e.g., biological) or external (e.g., other people). Featuring contributions from leading researchers in developmental psychopathology, the volume concentrates on recent theories and data concerning the development of emotion regulation, with an emphasis on both intrapersonal and interpersonal processes. Original conceptualizations of the reciprocal influences among the various response systems (neurophysiological, biochemical, behavioral, expressive, and subjective/experiential) are provided, and the individual chapters address both normal and psychopathological forms of emotion regulation, particularly depression and aggression from infancy through adolescence. This book will appeal to specialists in developmental, clinical, and social psychology, psychiatry, education, and others interested in understanding the developmental processes involved in the regulation of emotion over the course of childhood.
