Immunological Bioinformatics Ole Lund, Morten Nielsen, Claus Lundegaard, Can Kesmir, Søren Brunak, 2024-02-06 Using bioinformatics methods to generate a systems level view of the immune system description of the main biological concepts and the new data driven algorithms

Despite the fact that advanced bioinformatics methodologies have not been used as extensively in immunology as in other subdisciplines within biology research in immunological bioinformatics has already developed models of components of the immune system that can be combined and that may help develop therapies vaccines and diagnostic tools for such diseases as AIDS malaria and cancer In a broader perspective specialized bioinformatics methods in immunology make possible for the first time a systems level understanding of the immune system The traditional approaches to immunology are reductionist avoiding complexity but providing detailed knowledge of a single event cell or molecular entity Today a variety of experimental bioinformatics techniques connected to the sequencing of the human genome provides a sound scientific basis for a comprehensive description of the complex immunological processes This book offers a description of bioinformatics techniques as they are applied to immunology including a succinct account of the main biological concepts for students and researchers with backgrounds in mathematics statistics and computer science as well as explanations of the new data driven algorithms in the context of biological data that will be useful for immunologists biologists and biochemists working on vaccine design In each chapter the authors show interesting biological insights gained from the bioinformatics approach The book concludes by explaining how all the methods presented in the book can be integrated to identify immunogenic regions in microorganisms and host genomes
