Series Associated With The Zeta And Related Functions:

Series Associated With the Zeta and Related Functions Hari M. Srivastava,Junesang Choi,2001 In recent years there has been an increasing interest in problems involving closed form evaluations of and representations of the Riemann Zeta function at positive integer arguments as various families of series associated with the Riemann Zeta function s the Hurwitz Zeta function s a and their such extensions and generalizations as for example Lerch s transcendent or the Hurwitz Lerch Zeta function iI z s a Some of these developments have apparently stemmed from an over two century old theorem of Christian Goldbach 1690 1764 which was stated in a letter dated 1729 from Goldbach to Daniel Bernoulli 1700 1782 from recent rediscoveries of a fairly rapidly convergent series representation for 3 which is actually contained in a 1772 paper by Leonhard Euler 1707 1783 and from another known series representation for 3 which was used by Roger Apery 1916 1994 in 1978 in his celebrated proof of the irrationality of 3 This book is motivated essentially by the fact that the theories and applications of the various methods and techniques used in dealing with many different families of series associated with the Riemann Zeta function and its aforementioned relatives are to be found so far onlyin widely scattered journal articles Thus our systematic and unified presentation of these results on the evaluation and representation of the Zeta and related functions is expected to fill a conspicuous gap in the existing books dealing exclusively with these Zeta functions *Series Associated with the Zeta and Related Functions* Hari M.
