Servants Of Nature A History Of Scientific Institutions Enterprises And Sensibilities:

Servants of Nature Lewis Pyenson, Susan Sheets-Pyenson, 1999 The Language of Mineralogy Matthew D. Eddy, 2016-12-05 Classification is an important part of science yet the specific methods used to construct Enlightenment systems of natural history have proven to be the b te noir of studies of eighteenth century culture One reason that systematic classification has received so little attention is that natural history was an extremely diverse subject which appealed to a wide range of practitioners including wealthy patrons professionals and educators In order to show how the classification practices of a defined institutional setting enabled naturalists to create systems of natural history this book focuses on developments at Edinburgh s medical school one of Europe s leading medical programs In particular it concentrates on one of Scotland s most influential Enlightenment naturalists Rev Dr John Walker the professor of natural history at the school from 1779 to 1803 Walker was a traveller cleric author and advisor to extremely powerful aristocratic and government patrons as well as teacher to hundreds of students some of whom would go on to become influential industrialists scientists physicians and politicians This book explains how Walker used his networks of patrons and early training in chemistry to become an eighteenth century naturalist Walker s mineralogy was based firmly in chemistry an approach common in Edinburgh s medical school but a connection that has been generally overlooked in the history of British geology By explicitly connecting eighteenth century geology to the chemistry being taught in medical settings this book offers a dynamic new interpretation of the nascent earth sciences as they were practiced in Enlightenment Britain Because of Walker s influence on his many students the book also provides a unique insight into how many of Britain s leading Regency and Victorian intellectuals were taught to think about the composition and structure of the material world NASA Spaceflight Roger D. Launius, Howard E. McCurdy, 2017-10-11 This book presents the first comprehensive history of innovation at NASA bringing together experts in the field to illuminate how public private and international partnerships have fueled new ways of exploring space since the beginning of space travel itself Twelve case studies trace the messy risky history of such partnerships exploring the role of AT all have challenged conventional methods of doing the public s business in space Together these essays offer new insights into how innovation happens with invaluable lessons for policymakers investors economists and members of the space community **Rickets, Race and Reproduction** Deborah Kuhn McGregor, Robert Kuhn McGregor, 2024-01-19 This book outlines the history of rickets a disease commonly associated with childhood and studies its association with race and its long reaching effects on childbirth For centuries the condition was poorly understood For females rickets could pose a double jeopardy suffering in childhood and severe danger in adulthood when giving birth The disease could result in a contracted pelvis that obstructs the birth canal Medical researchers were faced with two distinct challenges unravelling the etiology of rickets and ensuring the safety of women giving birth both proved especially difficult Thought variously to be a disease of industrial cities and children of the poor grounded in lack of exercise or sunlight

or the of product racial difference the condition defied analysis until the discovery of vitamin D early in the 20th century The dangers of rickets radically diminished Medical intervention in childbirth continued and childbirth increasingly shifted from the home to the hospital Medical practitioners justified intervention by emphasizing the dangers of pelvic disproportion continually enlarging the definition to gain full control of birth Often conditioned by racial assumptions surgical experimentation promoted common use of anesthesia and a radical increase in caesarean sections and birth became a colder more clinical experience

Journal of a Voyage to New South Wales John White,2024-08-01 There have always been more or less scientific travellers but a new epoch began with the voyages of Captain James Cook His first on board the converted Whitby Collier HMS Endeavour was the result of cooperation between the Admiralty and the Royal Society This series only skims the surface of the rich collections of scientific travel books in the library of the Natural History Museum From this volume we learn much about the voyage of the first fleet the first desperate years of the colony in Sydney and the exploration of its neighbourhood

Isaac Newton James Gleick,2007-12-18 Isaac Newton was born in a stone farmhouse in 1642 fatherless and unwanted by his mother When he died in London in 1727 he was so renowned he was given a state funeral an unheard of honor for a subject whose achievements were in the realm of the intellect During the years he was an irascible presence at Trinity College Cambridge Newton imagined properties of nature and gave them names mass gravity velocity things our science now takes for granted Inspired by Aristotle spurred on by Galileo s discoveries and the philosophy of Descartes Newton grasped the intangible and dared to take its measure a leap of the mind unparalleled in his generation James Gleick the author of Chaos and Genius and one of the most acclaimed science writers of his generation brings the reader into Newton s reclusive life and provides startlingly clear explanations of the concepts that changed forever our perception of bodies rest and motion ideas so basic to the twenty first century it can truly be said We are all Newtonians

Paulin Hountondji and the Science Question in Africa Zeyad el Nabolsy,2025-07-18 This book offers a systematic reconstruction of Paulin Hountondji s contributions to the debate about the place of modern science on the African continent The book shows that Hountondji develops an account of modern science that is sociologically sensitive to the entanglement between modern science and colonialism on the African continent without falling into epistemic relativism about the claims of modern science It is argued that Hountondji s views on modern science express a strong historical materialist influence and that he develops a theory of science that draws both on the Hessen Grossmann hypothesis and dependency theory Thus this book brings together two strands of historical materialist thought about science that have hitherto been isolated from one another This book is of interest to scholars who specialize in African philosophy history and philosophy of science global philosophy and African studies

A Conceptual History of Psychology John D. Greenwood,2015-08-25 In the new edition of this original and penetrating book John D Greenwood provides an in depth analysis of the subtle conceptual continuities and discontinuities that inform the history of psychology from the speculations of the Ancient Greeks to contemporary cognitive

psychology He also demonstrates the fashion in which different conceptions of human and animal psychology and behavior have become associated and disassociated over the centuries Moving easily among psychology history of science physiology and philosophy Greenwood provides a critically challenging account of the development of psychology as a science He relates the remarkable stories of the intellectual pioneers of modern psychology while exploring the social and political milieu in which they operated and dispels many of the myths of the history of psychology based upon the best historical scholarship of recent decades This is an impressive overview that will appeal to scholars and graduate students of the history of psychology

Enlightenment, Modernity and Science Paul A. Elliot, 2010-10-30 Scientific culture was one of the defining characteristics of the English Enlightenment The latest discoveries were debated in homes institutions and towns around the country But how did the dissemination of scientific knowledge vary with geographical location What were the differing influences in town and country and from region to region Enlightenment Modernity and Science provides the first full length study of the geographies of Georgian scientific culture in England The author takes the reader on a tour of the principal arenas in which scientific ideas were disseminated including home town and countryside to show how cultures of science and knowledge varied across the Georgian landscape Taking in key figures such as Erasmus Darwin Abraham Bennett and Joseph Priestley along the way it is a work that sheds important light on the complex geographies of Georgian English scientific culture

Creolised Science Dorit Brixius, 2024-04-04 This rich deeply researched study offers the first comprehensive exploration of cross cultural plant knowledge in eighteenth century Mauritius Using the concept of creolisation the process by which elements of different cultures are brought together to create entangled and evolving new entities Brixius examines the production of knowledge on an island without long established traditions of botany as understood by Europeans Once foreign plants and knowledge arrived in Mauritius they were adapted to new environmental circumstances and a new socio cultural space Brixius explores how French colonists settlers mediators labourers and enslaved people experienced and shaped the island s botanical past centring the contributions of subaltern actors By foregrounding neglected non European actors from both Africa and Asia within a melting pot of cultivation traditions from around the world she presents a truly global history of botanical knowledge

Being Modern Robert Bud, Paul Greenhalgh, Frank James, Morag Shiach, 2018-10-10 In the early decades of the twentieth century engagement with science was commonly used as an emblem of modernity This phenomenon is now attracting increasing attention in different historical specialties Being Modern builds on this recent scholarly interest to explore engagement with science across culture from the end of the nineteenth century to approximately 1940 Addressing the breadth of cultural forms in Britain and the western world from the architecture of Le Corbusier to working class British science fiction Being Modern paints a rich picture Seventeen distinguished contributors from a range of fields including the cultural study of science and technology art

and architecture English culture and literature examine the issues involved The book will be a valuable resource for students and a spur to scholars to further examination of culture as an interconnected web of which science is a critical part and to supersede such tired formulations as Science and culture Animals in the Anthropocene Edited by the Human Animal Research Network Editorial Collective,2015-06-16 Much of the discussion on the Anthropocene has centred upon anthropogenic global warming and climate change and the urgency of political and social responses to this problem Animals in the Anthropocene critical perspectives on non human futures shows that assessing the effects of human activity on the planet requires more than just the quantification of ecological impacts towards the categorisation of geological eras It requires recognising and evaluating a wide range of territories and terrains full of non human agents and interests and meanings exposed to the profound forces of change that give their name to the Anthropocene It is from the perspective of the animal question asking how best to think and live with animals that Animals in the Anthropocene seeks to interrogate the Anthropocene as a concept discourse and state of affairs The term Anthropocene is a useful device for drawing attention to the devastations wreaked by anthropocentrism and advancing a relational model for human and non human life The effects on animals of human political and economic systems continue to expand and intensify in numerous domains and in ways that not only cause suffering and loss but that also produce new forms of life and alter the very nature of species As anthropogenic change affects the more than human world in innumerable ways we must accept responsibility for the damage we have caused and the debt we owe to non human species Legal and Political Challenges of Governing the Environment and Climate Change Gary Wickham,Jo-Ann Goodie,2013-11-26 The environment has not always been protected by law It was not until the middle of the 20th century that the environment came to be understood as an entity in need of special care and the law politics duo firmly fixed its focus on this issue In this book Wickham and Goodie tell the story of how law and politics first came upon the environment as an object in need of special attention They outline the unlikely intersection of aesthetics and science that made the environment into the matter of great concern it is today The book describes the way private common law strategies and public law legislative strategies have approached the task of protecting the environment and explore the greatest environmental challenge to have so far confronted environmental law and politics the threat of global climate change The book offers descriptions of many of the strategies being deployed to meet this challenge and present some troubling assessments of them The book will be of great interest to students teachers and researchers of environmental law socio legal studies environmental studies and political theory Fifty Years of Women in Mathematics Janet L. Beery,Sarah J. Greenwald,Cathy Kessel,2022-04-21 The Association for Women in Mathematics AWM the oldest organization in the world for women in mathematics had its fiftieth anniversary in 2021 This collection of refereed articles illustrated by color photographs reflects on women in mathematics and the organization as a whole Some articles focus on the situation for women in mathematics at various times and places including other countries Others describe how individuals have shaped

AWM and in turn how the organization has impacted individuals as well as the broader mathematical community. Some are personal stories about careers in mathematics. *Fifty Years of Women in Mathematics: Reminiscences, History and Visions for the Future* of AWM covers a span from AWM's beginnings through the following fifty years. The volume celebrates AWM and its successes but does not shy away from its challenges. The book is designed for a general audience. It provides interesting and informative reading for people interested in mathematics, gender equity, or organizational structures: teachers of mathematics, students at the high school, college, and graduate levels, and members of more recently established organizations for women in mathematics and related fields or prospective founders of such organizations.

The Scientific Article in the Age of Digitization John Mackenzie Owen, 2006-11-18

1 The birth of the electronic journal In the autumn of 1987 Michael Ehringhaus and Bird Stasz of Syracuse University launched *New horizons in adult education*, probably the very first refereed scientific journal to be published in electronic form.

g 1 1 The first issue was sent over the Adult Education Network (AEDNET). The journal still exists today. In March 1991 Ted Jennings of the University at Albany State University of New York launched *EJournal*, described as an electronic journal concerned with the implications of electronic networks and texts.

g 1 2 coining the now popular term *electronic journal*. The *Online journal of current clinical trials*, published from September 1991, has been described as the first peer-reviewed electronic journal in medicine. How significant is the phenomenon of the scientific electronic journal today, more than a decade and a half after its introduction? Over this period, information and communication technologies (ICT) have been an important factor in the development of scientific communication. Applications such as communication over digital networks, converging towards a single network, the Internet, the use of computerized systems for creating, storing, and retrieving.

1 The scientific journal is also referred to as scholarly or research journal. We use the former term in this study.

2 Although no longer distributed over AEDNET but through the World Wide Web, the first issue is now available at <http://www.nova.edu/aed/horizons/vol1n1>.

Science and Politics Brent S. Steel, 2014-04-21 Recent partisan squabbles over science in the news are indicative of a larger tendency for scientific research and practice to get entangled in major ideological divisions in the public arena. This politicization of science is deepened by the key role government funding plays in scientific research and development, the market-leading position of U.S.-based science and technology firms, and controversial U.S. exports such as genetically modified foods or hormone-injected livestock. This groundbreaking one-volume A to Z reference features 120-150 entries that explore the nexus of politics and science both in the United States and in U.S. interactions with other nations. The essays, each by experts in their fields, examine health, environmental, and social/cultural issues relating to science and politics. Concerns relating to government regulation and its impact on the practice of science. Key historical and contemporary events that have shaped our contemporary view of how science and politics intersect.

Science and Politics: An A to Z Guide to Issues and Controversies is a must-have resource for researchers and students who seek to deepen their understanding of the connection between science and politics.
