Mathematical Methods For Economic Theory 1:

Mathematical Methods for Economic Theory 1 James C. Moore, 1999-10-19 This two volume work functions both as a textbook for graduates and as a reference for economic scholars Assuming only the minimal mathematics background required of every second year graduate the two volumes provide a self contained and careful development of mathematics through locally convex topological vector spaces and fixed point separation and selection theorems in such spaces Volume One covers basic set theory sequences and series continuous and semi continuous functions an introduction to general linear spaces basic convexity theory and applications to economics

Mathematical Methods for Economic Theory 2 James C. Moore, 2013-03-14 This is the second of a two volume work intended to function as a textbook well as a reference work for economic for graduate students in economics as scholars who are either working in theory or who have a strong interest in economic theory While it is not necessary that a student read the first volume before tackling this one it may make things easier to have done so In any case the student undertaking a serious study of this volume should be familiar with the theories of continuity convergence and convexity in Euclidean space and have had a fairly sophisticated semester s work in Linear Algebra While I have set forth my reasons for writing these volumes in the preface to Volume 1 of this work it is perhaps in order to repeat that explanation here I have undertaken this project for three principal reasons In the first place I have collected a number of results which are frequently useful in economics but for which exact statements and proofs are rather difficult to find for example a number of results on convex sets and their separation by hyperplanes some results on correspondences and some results concerning support functions and their duals Secondly while the mathematical topics taken up in these two volumes are generally taught somewhere in the mathematics curriculum they are never insofar as I am aware done in a two course sequence as they are arranged here

Mathematical Methods of Game and Economic Theory Jean-Pierre Aubin, 2007-01-01 Mathematical economics and game theory approached with the fundamental mathematical toolbox of nonlinear functional analysis are the central themes of this text Both optimization and equilibrium theories are covered in full detail The book s central application is the fundamental economic problem of allocating scarce resources among competing agents which leads to considerations of the interrelated applications in game theory and the theory of optimization Mathematicians mathematical economists and operations research specialists will find that it provides a solid foundation in nonlinear functional analysis This text begins by developing linear and convex analysis in the context of optimization theory The treatment includes results on the existence and stability of solutions to optimization problems as well as an introduction to duality theory The second part explores a number of topics in game theory and mathematical economics including two person games which provide the framework to study theorems of nonlinear analysis The text concludes with an introduction to non linear analysis and optimal control theory including an array of fixed point and subjectivity theorems that offer powerful tools in proving existence theorems

Mathematical Methods in Economics Norman

Schofield,2018-03-05 Originally published in 1984 Since the logic underlying economic theory can only be grasped fully by a thorough understanding of the mathematics this book will be invaluable to economists wishing to understand vast areas of important research It provides a basic introduction to the fundamental mathematical ideas of topology and calculus and uses these to present modern singularity theory and recent results on the generic existence of isolated price equilibria in exchange economies *Mathematical Methods in Economics and Social Choice* Norman Schofield,2003-02-12 In recent

years the usual optimization techniques which have proved so useful in microeconomic theory have been extended to incorporate more powerful topological and differential methods and these methods have led to new results on the qualitative behavior of general economic and political systems These developments have necessarily resulted in an increase in the degree of formalism in the publications in the academic journals This formalism can often deter graduate students The progression of ideas presented in this book will familiarize the student with the geometric concepts underlying these topological methods and as a result make mathematical economics general equilibrium theory and social choice theory more accessible **A History of Economic Theory and Method** Robert B. Ekelund, Jr.,Robert F. Hébert,2013-08-30 Known for

its clarity comprehensiveness and balance the latest edition of A History of Economic Theory and Method continues that tradition of excellence Ekelund and Hébert's survey provides historical and international contexts for how economic models have served social needs throughout the centuries beginning with the ancient Greeks through the present time The authors not only trace ideas that have persisted but skillfully demonstrate that past discredited ideas also have a way of spawning critical thinking and encouraging new directions in economic analysis Coverage that distinguishes the Sixth Edition from its predecessors includes a detailed analysis of economic solutions by John Stuart Mill and Edwin Chadwick to problems raised by the Industrial Revolution the role of psychology and experiments in understanding demand and consumer behavior discussions of modern economic theory as it interrelates with other social sciences and a close look at the historical development of the critical role of entrepreneurship both in its productive and unproductive variants The authors creative approach gives readers a feel for the thought processes of the great minds in economics and underscores key ideas impacting contemporary thought and practice Well crafted discussions are further enriched by absorbing examples and figures Thorough suggested reading lists give options for more in depth explorations by interested readers *Modern*

Institutions, Equilibria and Efficiency Christian Schultz, Karl Vind, 2006-04-22 Competition and efficiency is at the core of economic theory This volume collects papers of leading scholars which extend the conventional general equilibrium model in important ways Efficiency and price regulation are studied when markets are incomplete and existence of equilibria in such settings is proven under very general preference assumptions The model is extended to include geographical location choice a commodity space incorporating manufacturing imprecision and preferences for club membership schools and firms Inefficiencies arising from household externalities or group membership are evaluated Core equivalence is shown for bargaining economies The theory of risk aversion is extended and the relation between risk taking and wealth is experimentally investigated Other topics include determinacy in OLG with cash in advance constraints income distribution and democracy in OLG learning in OLG and in games optimal pricing of derivative securities the impact of heterogeneity at the individual level for aggregate consumption and adaptive contracting in view of uncertainty **Assets, Beliefs, and**

Irreversible Decisions under Uncertainty Svetlana Boyarchenko, Sergei Levendorskii, 2007-08-26 Here two highly experienced authors present an alternative approach to optimal stopping problems The basic ideas and techniques of the approach can be explained much simpler than the standard methods in the literature on optimal stopping problems The monograph will teach the reader to apply the technique to many problems in economics and finance including new ones From the technical point of view the method can be characterized as option pricing via the Wiener Hopf factorization

Curriculum Handbook with General Information Concerning ... for the United States Air Force Academy United States Air Force Academy, 1998 The Neumann Compendium Murray Muraskin, F Brody, Tibor Vamos, 1995-06-30 After three decades since the first nearly complete edition of John von Neumann's papers this book is a valuable selection of those papers and excerpts of his books that are most characteristic of his activity and reveal that of his continuous influence The results receiving the 1994 Nobel Prizes in economy deeply rooted in Neumann's game theory are only minor traces of his exceptionally broad spectrum of creativity and stimulation The book is organized by the specific subjects quantum mechanics ergodic theory operator algebra hydrodynamics economics computers science and society In addition one paper which was written in German will be translated and published in English for the first time The sections are introduced by short explanatory notes with an emphasis on recent developments based on von Neumann's contributions An overall picture is provided by Ulam's one of his most intimate partners in thinking 1958 memorial lecture Facsimilae and translations of some of his personal letters and a newly completed bibliography based on von Neumann's own careful compilation are added

Multidimensional Screening Suren Basov, 2005-01-11 In many industries the tariffs are not strictly proportional to the quantity purchased i.e. they are nonlinear. Examples of nonlinear tariffs include railroad and electricity schedules and rental rates for durable goods and space. The major justification for the nonlinear pricing is the existence of private information on the side of consumers. In the early papers on the subject private information was captured either by assuming a finite number of types e.g. Adams and Yellen 1976 or by a unidimensional continuum of types Mussa and Rosen 1978. Economics of the unidimensional problems is by now well understood. The unidimensional models however do not cover all the situations of practical interest. Indeed often the nonlinear tariffs specify the payment as a function of a variety of characteristics. For example railroad tariffs specify charges based on weight, volume and distance of each shipment. Different customers may value each of these characteristics differently hence the customer's type will not in general be captured by a unidimensional characteristic and a problem of multidimensional screening arises. In such models the consumer's private information her type is captured by an m -dimensional vector while the good produced by the monopolist has n quality dimensions.

Criminal Dilemmas Katri K. Sieberg, 2006-03-30 Fighting crime breeds emotional responses which often lead to counterproductive government policy. To allow a rational analysis of these important concerns this book employs the thinking of economics, political science and game theory to develop new perspectives on crime and its causes. A basic assumption is that the criminal is a rational actor who makes decisions based on his or her personal expected gains and costs. By using this assumption predictions about behaviour as well as emotional concerns such as prostitution and gun control are given a theoretical perspective. By understanding the strategic variables which cause for example gang wars and drug sales we are better equipped to design effective public policy. In the new edition a chapter on police corruption has been added. The Gangs chapter has been updated and focuses more on evaluating competing hypotheses about gang organization and activity.
