Kakadiaris,Jan Kybic,2004-09-20 Medical imaging and medical image analysis are rapidly developing While medical imaging has already become a standard of modern medical care medical image analysis is still mostly performed visually and qualitatively The ever increasing volume of acquired data makes it impossible to utilize them in full Equally important the visual approaches to medical image analysis are known to suffer from a lack of reproducibility A significant research effort is devoted to developing algorithms for processing the wealth of data available and extracting the relevant information in a computerized and quantitative fashion Medical imaging and image analysis are interdisciplinary areas combining electrical computer and biomedical engineering computer science mathematics physics

biomedical image understanding     *Medical Image Computing and Computer-Assisted Intervention - MICCAI 2001* Wiro J. Niessen, Max A. Viergever, 2003-06-30 In the four years of its existence MICCAI has developed into the premier annual conference on medical image computing and computer assisted intervention. The single track conference has an interdisciplinary character bringing together researchers from both the natural sciences and various medical disciplines. It provides the international forum for developments concerning all aspects of medical image processing and visualization, image guided and computer aided techniques and robot technology in medicine. The strong interest in MICCAI is confirmed by the large number of submissions we received this year which by far surpassed our expectations. The arrival of the shipload of papers just before the deadlines one in the European and the other in the American time zone was a particularly enjoyable experience as was the whole procedure of preparing the scientific programme. Both the quantity and quality of the submissions allowed us to compose a volume of high quality papers which we are sure will contribute to the further development of this exciting field of research. As for the hard numbers in total 338 submissions were received. Next to full papers short communications were solicited for works in progress, hardware prototypes and clinical case studies. Long papers were reviewed by three or four reviewers and short papers by two or three reviewers. The final selection of papers was carried out by the Programme Board. Out of the 246 long papers 36 were accepted for oral presentation and 100 as full posters. An additional 75 of the long papers and 47 out of 92 short papers were accepted as short posters.

The 579 full papers presented were carefully reviewed and selected from 1526 submissions. The papers cover various topics in the broad areas of pattern recognition and computer vision including machine learning, pattern classification and cluster analysis, neural network and deep learning, low level vision and image processing, object detection and recognition, 3D vision and reconstruction, action recognition, video analysis and understanding, document analysis and recognition, biometrics, medical image analysis and various applications.
