Army Conference on Applied Mathematics and Computing ,1989      *Multicomponent Transport Algorithms* Alexandre Ern,Vincent Giovangigli,2008-10-10 With the advent of sophisticated computer technology and the development of efficient computational algorithms numerical modeling of complex multicomponent laminar reacting flows has emerged as an increasingly popular and firmly established area of scientific research Progress in this area aims at obtaining better resolved and more accurate solutions of specific technological problems in less computer time Therefore it strongly relies upon the ability of evaluating fundamental parameters appearing in the physical models Transport properties constitute a typical example of the above characterization Evaluating transport coefficients of dilute polyatomic gas mixtures is often critical in many engineering applications including chemical reactors hypersonic flows combustion phenomena and chemical vapor deposition Using the kinetic theory of dilute polyatomic gas mixtures as a starting point this book offers a systematic development of a mathematical and numerical theory for the evaluation of transport properties in dilute polyatomic gas mixtures The present investigation is not specifically about the kinetic theory of gases for which there are plenty of excellent and thoroughly documented textbooks it is rather geared toward the development of new efficient and general algorithms with which to evaluate transport properties of dilute polyatomic gas mixtures at a reasonable computational cost      Solid Rocket Propulsion Technology A. Davenas,2012-12-02 This book a translation of the French title Technologie des Propergols Solides offers otherwise unavailable information on the subject of solid propellants and their use in rocket propulsion The fundamentals of rocket propulsion are developed in chapter one and detailed descriptions of concepts are covered in the following chapters Specific design methods and the theoretical physics underlying them are presented and finally the industrial production of the propellant itself is explained The material used in the book has been collected from different countries as the development of this field has occurred separately due to the classified nature of the subject Thus the reader not only has an overall picture of solid rocket propulsion technology but a comprehensive view of its different developmental permutations worldwide      *The Abel Prize 2013-2017* Helge Holden,Ragni Piene,2019-02-23 The book presents the winners of the Abel Prize in mathematics for the period 2013-2017 Pierre Deligne 2013 Yakov G Sinai 2014 John Nash Jr and Louis Nirenberg 2015 Sir Andrew Wiles 2016 and Yves Meyer 2017 The profiles feature autobiographical information as well as a scholarly description of each mathematician's work In addition each profile contains a Curriculum Vitae a complete bibliography and the full citation from the prize committee The book also includes photos for the period 2003-2017 showing many of the additional activities connected with the Abel Prize As an added feature video interviews with the Laureates as well as videos from the prize ceremony are provided at an accompanying website <http://extras.springer.com> This book follows on *The Abel Prize 2003-2007 The First Five Years* Springer 2010 and *The Abel Prize 2008-2012* Springer 2014 which profile the work of the previous Abel Prize winners      *Progress in Industrial Mathematics at ECMI 2018* István Faragó,Ferenc Izsák,Péter L. **Free Boundary Problems** Darya Apushkinskaya, 2018-09-20 This book is concerned with several elliptic and parabolic obstacle type problems with a focus on the cases where the free and fixed boundaries meet The results presented complement those found in existing books in the subject which mainly treat regularity properties away from the fixed boundary The topics include optimal regularity analysis of global solutions tangential touch of the free and fixed boundaries as well as Lipschitz and  $C^1$  regularity of the free boundary Special attention is given to local versions of various monotonicity formulas The intended audience includes research mathematicians and advanced graduate students interested in problems with free boundaries

*Computational Fluid Dynamics for the Petrochemical Process Industry* R.V.A. Oliemans, 2012-12-06 The second of the 1989 conferences in the Shell Conference Series held from 10 to 12 December in the Netherlands and organized by Koninklijke Shell Laboratorium Amsterdam was on Computational Fluid Dynamics for Petrochemical Process Equipment The objective was to generate a shared perspective on the subject with respect to its role in the design of equipment involving complex flows The conference was attended by scientists from four Shell laboratories and experts from universities in the USA France Great Britain Germany and The Netherlands R V A Oliemans G Ooms and T M M Verheggen formed the organizing committee Complexities in fluid flow may arise from equipment geometry and or the fluids themselves which can be multi component single phase or multiphase Pressure and temperature gradients and any reactivity of components in the flow stream can be additional factors Four themes were addressed turbulent reacting and non reacting flow dispersed multiphase flow separated

two phase flow and fluid flow simulation tools The capabilities and limitations of a sequence of turbulence flow models from the relatively simple k model to direct numerical simulation and large eddy turbulence flow models were considered for a range of petrochemical process equipment Flow stability aspects and the potential of cellular automata for the simulation of industrial flows also received attention The papers published in this special issue of Applied Scientific Research provide a fair representation of the Computational Fluid Dynamics topics discussed in the context of their application to petrochemical process equipment

(Japan), 1900      **The Science and Technology of Coal and Coal Utilization** Bernard Cooper, 2013-11-11 Filling the need for new and improved energy sources is an area where societal effects of science and technology will surely increase The editors and authors have attempted in this volume to present the most current work on the science and technology of coal and coal utilization Serious disagreement exists on several key issues such as carbon dioxide release and acid rain At the same time however coal is the world s most abundant fossil fuel and will have to be used to supply the world s energy needs for the next several decades The 1979 National Research Council Report Energy in Transition 1985 2010 has estimated that the United States alone may go from a 1979 coal consumption of 14 QUADS per annum approximately 750 million tons per year to approximately 40 50 QUADS per annum approximately 2 billion tons per year by the year 2010 If this scale of coal utilization is to become a reality a significant level of research and development will be necessary to establish advanced process technologies and to improve related areas such as materials and instrumentation The editors hope that this volume will allow a technically educated person to become aware of the several aspects of coal utilization from characterization of coal itself to the processes of coal utilization B R Cooper and W A Ellingson March 1983 vii Contents 1 THE SCIENCE AND TECHNOLOGY OF COAL AND COAL UTILIZATION 1 Bernard R Cooper and William A Ellingson 2 COAL CHARACTERIZATION
