Mathematical Science Technology And Economic Competition:

Mathematical Sciences, Technology, and Economic Competitiveness National Research Council, Division on Engineering and Physical Sciences, Commission on Physical Sciences, Mathematics, and Applications, Board on Mathematical Sciences, 1991-02-01 This book describes the contributions of mathematics to the nation's advanced technology and to economic competitiveness. Examples from five industries: aircraft, petroleum, automotive, semiconductor, and telecommunications illustrate how mathematics enters into and improves industry. Mathematical Sciences Technology and Economic Competitiveness addresses these high technology industries and breadth of mathematical endeavors in the United States as they materially contribute to the technology base from which innovation in these industries flows. The book represents a serious attempt by the mathematics community to bring about an awareness by policymakers of the pervasive influence of mathematics in everyday life.

SBIR and the Phase III Challenge of Commercialization National Research Council, Policy and Global Affairs, Committee on Capitalizing on Science, Technology, and Innovation: An Assessment of the Small Business Innovation Research Program, 2007-03-15 In response to a Congressional mandate the National Research Council conducted a review of the Small Business Innovation Research Program (SBIR) at the five federal agencies with SBIR programs with budgets in excess of 100 million: DOD, NIH, NASA, DOE, and NSF. The project was designed to answer questions of program operation and effectiveness including the quality of the research projects being conducted under the SBIR program, the commercialization of the research, and the program's contribution to accomplishing agency missions. This report summarizes the presentations at a symposium exploring the effectiveness of Phase III of the SBIR program, the commercialization phase during which innovations funded by Phase II awards move from the laboratory into the marketplace. No SBIR funds support Phase III; instead, to commercialize their products, small businesses are expected to garner additional funds from private investors, the capital markets, or from the agency that made the initial award.

SBIR at the National Science Foundation National Academies of Sciences, Engineering, and Medicine, Policy and Global Affairs, Board on Science, Technology, and Economic Policy, Committee on Capitalizing on Science, Technology, and Innovation: An Assessment of the Small Business Innovation Research Program—Phase II, 2016-01-17 The Small Business Innovation Research (SBIR) program is one of the largest examples of U.S. public-private partnerships and was established in 1982 to encourage small businesses to develop new processes and products and to provide quality research in support of the U.S. government's many missions. The U.S. Congress tasked the National Research Council with undertaking a comprehensive study of how the SBIR program has stimulated technological innovation and used small businesses to meet federal research and development needs and with recommending further improvements to the program. In the first round of this study, an ad hoc committee prepared a series of reports from 2004 to 2009 on the SBIR program at the five agencies responsible for 96

percent of the program's operations including the National Science Foundation NSF Building on the outcomes from the first round this second round presents the committee's second review of the NSF SBIR program's operations Public private partnerships like SBIR are particularly important since today's knowledge economy is driven in large part by the nation's capacity to innovate One of the defining features of the U S economy is a high level of entrepreneurial activity Entrepreneurs in the United States see opportunities and are willing and able to assume risk to bring new welfare enhancing wealth generating technologies to the market Yet although discoveries in areas such as genomics bioinformatics and nanotechnology present new opportunities converting these discoveries into innovations for the market involves substantial challenges The American capacity for innovation can be strengthened by addressing the challenges faced by entrepreneurs **An**
