

## 1.6 Mathematical Structures

A structure with a binary operation  $\square$  may contain a distinguished object  $e$ , with the property  $x \square e = e \square x = x$  for all  $x$  in the collection. We call  $e$  an **identity**(幺元) for  $\square$ .

**Theorem 5.** If  $e$  is an identity for a binary operation  $\square$ , then  $e$  is unique.

*Proof:*

Assume another object  $i$  also has the identity property, so  $x \square i = i \square x = x$ .

Then  $e \square i = e$ , but since  $e$  is an identity for  $\square$ ,  $e \square i = i$ .

Thus,  $i = e$ .

Therefore there is at most one object with the identity property for  $\square$ .

The Mathematical Structure of Stable Physical Systems Dr. Martin Concoyle, G.P. Coatmundi, 2014-01-16 This book is an introduction to the simple math patterns used to describe fundamental stable spectral orbital physical systems represented as discrete hyperbolic shapes the containment set has many dimensions and these dimensions possess macroscopic geometric properties which are also discrete hyperbolic shapes Thus it is a description which transcends the idea of materialism ie it is higher dimensional and it can also be used to model a life form as a unified high dimension geometric construct which generates its own energy and which has a natural structure for memory where this construct is made in relation to the main property of the description being in fact the spectral properties of both material systems and of the metric spaces which contain the material systems where material is simply a lower dimension metric space and where both material components and metric spaces are in resonance with the containing space Partial differential equations are defined on the many metric spaces of this description but their main function is to act on either the usually unimportant free material components to most often cause non linear dynamics or to perturb the orbits of the quite often condensed material trapped by or within the stable orbits of a very stable hyperbolic metric space shape
