Graph-Theoretic Concepts in Computer Science Rolf H. Möhring,1991-04-24 This volume gives the proceedings of WG 90 the 16th in a series of workshops The aim of the workshop series is to contribute to integration in computer science by applying graph theoretic concepts The workshops are unusual in that they combine theoretical aspects with practice and applications The volume is organized into sections on Graph algorithms and complexity VLSI layout Multiprocessor systems and concurrency Computational geometry Graphs languages and databases Graph grammars The volume contains revised versions of nearly all the papers presented at the workshop Several papers take the form of preliminary reports on ongoing research **CSL '89** Egon Börger,Hans Kleine Büning,1990-07-10 This volume contains the revised versions of 28 papers presented at the third workshop on Computer Science Logic held in Kaiserslautern FRG October 2 6 1989 These proceedings cover a wide range of topics both from theoretical and applied areas of computer science More specifically the papers deal with problems arising at the border of logic and computer science e g in complexity data base theory logic programming artificial intelligece and temporal logic The volume should be of interest to all logicians and computer scientists working in the above field **Advances in Petri Nets 1990** Grzegorz Rozenberg,1991-03-13 The main idea behind the series of volumes Advances in Petri Nets is to present to the general computer science community recent results which are the most representative and significant for the development of the area The papers for the volumes are drawn mainly from the annual International Conferences on Applications and Theory of Petri Nets Selected papers from the latest conference are independently refereed and revised and extended as necessary Some further papers submitted directly to the editor are included Advances in Petri Nets 1990 covers the Tenth International Conference on Applications and Theory of Petri Nets held in Bonn Germany in June 1989 Additional highlights of this volume include a tutorial on refinements of Petri nets by W Brauer R Gold and W Vogler and a tutorial on analysis and synthesis of free choice systems by J Esparza and M Silva both

Fiala,1990 This volume contains selected and invited papers presented at the International Conference on Computing and Information ICCI 90 Niagara Falls Ontario Canada May 23 26 1990 ICCI conferences provide an international forum for presenting new results in research development and applications in computing and information Their primary goal is to promote an interchange of ideas and cooperation between practitioners and theorists in the interdisciplinary fields of computing communication and information theory The four main topic areas of ICCI 90 are Information and coding theory statistics and probability Foundations of computer science theory of algorithms and programming Concurrency parallelism communications networking computer architecture and VLSI Data and software engineering databases expert systems information systems decision making and AI methodologies **Programming Language Implementation and Logic Programming** Pierre Deransart,Jan Maluszynski,1990-08-08 This volume consists of the papers accepted for presentation at the second international workshop on Programming Language Implementation and Logic Programming PLILP 90 held in Link ping Sweden August 20 22 1990 The aim of the workshop was to identify concepts and techniques used both in implementation of programming languages regardless of the underlying programming paradigm and in logic programming The intention was to bring together researchers working in these fields The volume includes 26 selected papers falling into two categories Papers in the first category present certain ideas from the point of view of a particular class of programming languages or even a particular language The ideas presented seem to be applicable in other classes of languages Papers in the second category directly address the problem of integration of various programming paradigms The proceedings of the predecessor workshop PLILP 88 held in Orl ans France May 16 18 1988 are available as Lecture Notes in Computer Science Vol 348 Advanced Information Systems Engineering Rudolf Andersen,Janis Bubenko,1991-04-30 Proceedings Attribute Grammars and Their Applications Pierre Deransart,Martin Jourdan,1990-09-07 Proceedings Computer Aided Systems Theory - EUROCAST '89 Franz Pichler,Roberto Moreno-Diaz,1990-02-07 Nonlinear Evolution Equations and Dynamical Systems NEEDS provides a presentation of the state of the art Except for a few review papers the 40 contributions are intentially brief to give only the gist of the methods proofs etc including references to the relevant litera ture This gives a handy overview of current research activities Hence the book should be equally useful to the senior resercher as well as the colleague just entering the field Keypoints treated are i integrable systems in multidimensions and associated phenomenology dromions ii criteria and tests of integrability e g Painlev test iii new developments related to the scattering transform iv algebraic approaches to integrable systems and Hamiltonian theory e g connections with Young Baxter equations and Kac Moody algebras v new developments in mappings and cellular automata vi applications to general relativity condensed matter physics and oceanography *Automatic Verification Methods for Finite State Systems* Joseph Sifakis,1990-01-10 This volume contains the proceedings of a workshop

held in Grenoble in June 1989 This was the first workshop entirely devoted to the verification of finite state systems The workshop brought together researchers and practitioners interested in the development and use of methods tools and theories for automatic verification of finite state systems The goal at the workshop was to compare verification methods and tools to assist the applications designer The papers in this volume review verification techniques for finite state systems and evaluate their relative advantages The techniques considered cover various specification formalisms such as process algebras automata and logics Most of the papers focus on exploitation of existing results in three application areas hardware design communication protocols and real time systems **Expert Systems in Engineering** Georg Gottlob,Wolfgang Nejdl,1990-09-12 The goal of the International Workshop on Expert Systems in Engineering is to stimulate the flow of information between researchers working on theoretical and applied research topics in this area It puts special emphasis on new technologies relevant to industrial engineering expert systems such as model based diagnosis qualitative reasoning planning and design and to the conditions in which they operate in real time with database support The workshop is especially relevant for engineering environments like CIM computer integrated manufacturing and process automation

Concrete and Abstract Voronoi Diagrams Rolf Klein,1989-12-20 The Voronoi diagram of a set of sites is a partition of the plane into regions one to each site such that the region of each site contains all points of the plane that are closer to this site than to the other ones Such partitions are of great importance to computer science and many other fields The challenge is to compute Voronoi diagrams quickly The problem is that their structure depends on the notion of distance and the sort of site In this book the author proposes a unifying approach by introducing abstract Voronoi diagrams These are based on the concept of bisecting curves which are required to have some simple properties that are actually possessed by most bisectors of concrete Voronoi diagrams Abstract Voronoi diagrams can be computed efficiently and there exists a worst case efficient algorithm of divide and conquer type that applies to all abstract Voronoi diagrams satisfying a certain constraint The author shows that this constraint is fulfilled by the concrete diagrams based on large classes of metrics in the plane Logic Programming '88 Koichi Furukawa,Hozumi Tanaka,1989-09-06 This volume contains a selection of papers presented at the Seventh Logic Programming Conference that took place in Tokyo April 11 14 1988 It is the successor to the previous conference proceedings published as Lecture Notes in Computer Science Volumes 221 264 and 315 The book covers various aspects of logic programming such as foundations programming languages systems concurrent programming knowledge bases applications of computer aided reasoning and natural language processing The papers on foundations present theoretical results on narrowing a proof strategy for proving properties of Prolog programs based on inductionless induction and several issues in nonmonotonic reasoning Of special interest to mathematicians is the paper on computer aided reasoning which describes a system for assisting human reasoning Natural language application papers treat the lexical analysis of Japanese sentences a system that generates a summary of a given sentence and a new knowledge representation
