Mathematical Visualization Algorithms Applications And Numerics:

Mathematical Visualization H.-C. Hege, Konrad Polthier, 1998-10-20 Mathematical Visualization is a young new discipline. It offers efficient visualization tools to the classical subjects of mathematics and applies mathematical techniques to problems in computer graphics and scientific visualization. Originally it started in the interdisciplinary area of differential geometry, numerical mathematics and computer graphics. In recent years the methods developed have found important applications. The current volume is the quintessence of an international workshop in September 1997 in Berlin focusing on recent developments in this emerging area. Experts present selected research work on new algorithms for visualization problems, describe the application and experiments in geometry and develop new numerical or computer graphical techniques.

Mathematical Visualization H. -C Hege, Konrad Polthier, 2014-01-15 *An Introduction to Recent Developments in Theory and Numerics for Conservation Laws* Dietmar Kröner, Mario Ohlberger, Christian Rohde, 2012-12-06 The book concerns theoretical and numerical aspects of systems of conservation laws which can be considered as a mathematical model for the flows of inviscid compressible fluids. Five leading specialists in this area give an overview of the recent results which include kinetic methods, non-classical shock waves, viscosity and relaxation methods, a posteriori error estimates, numerical schemes of higher order on unstructured grids in 3D, preconditioning and symmetrization of the Euler and Navier-Stokes equations. This book will prove to be very useful for scientists working in mathematics, computational fluid mechanics, aerodynamics and astrophysics as well as for graduate students who want to learn about new developments in this area.

High Performance Computing in Science and Engineering '98 Egon Krause, Willi Jäger, 2012-12-06 The book contains reports about the most significant projects from science and industry that are using the supercomputers of the Federal High Performance Computing Center Stuttgart HLRS. These projects are from different scientific disciplines with a focus on engineering, physics and chemistry. They were carefully selected in a peer review process and are showcases for an innovative combination of state-of-the-art physical modeling, novel algorithms and the use of leading edge parallel computer technology. As HLRS is in close cooperation with industrial companies, special emphasis has been put on the industrial relevance of results and methods.

Geo-Topology Fivos Papadimitriou, 2024-01-05 Geo-Topology is an exploration of the depth and breadth of the relationships between Geography and Topology with applications ranging from Landscape Geography to Social Geography and from Spatial Analysis to Geospatial Technologies. It shows how topics of geographical research, landscapes, borders, spatial social relationships etc. can be examined by using mathematical concepts and methods of Topology, exposing the realm of geo-topological modelling and visualization through Point Set Topology, Knot Theory, Reeb graphs, Topological Surfaces i.e. Möbius bands and Klein bottles, Differential Topology, Network Analysis, Combinatorial Topology, Braid Theory and Ultrametric Topology. Besides geographers, this book is a trove of new ideas for landscape ecologists, mathematicians, data scientists, sociologists, psychologists, anthropologists and educators. Geo-Topology is a
