**Mathematics and the Laws of Nature** John Tabak, 2014-05-14 Many of the great minds of the past used mathematics to explore and then define the principal laws of nature

**Science in the Forest, Science in the Past** Willard McCarty, Geoffrey E. R. Lloyd, Aparecida Vilça, 2022-03-29 Science in the Forest Science in the Past Further Interdisciplinary Explorations comprises of papers from the second of two workshops involving a group of scholars united in the conviction that the great diversity of knowledge claims and practices for which we have evidence must be taken seriously in their own terms rather than by the yardstick of Western modernity Bringing to bear social anthropology history and philosophy of science computer science classics and sinology among other fields they argue that the use of such dismissive labels as magic superstition and the irrational masks rather than solves the problem and reject counsels of despair which assume or argue that radically alien beliefs are strictly unintelligible to outsiders and can be understood only from within the system in question At the same time they accept that how to proceed to a better understanding of the data in question poses a formidable challenge Key problems identified in the inaugural workshop whose proceedings were published in HAU Journal of Ethnographic Theory 2019 and in HAU Books 2020 provided the basis for asking how obvious pitfalls might be avoided and a new or revised framework within which to pursue these problems proposed The chapters in this book were originally published in Interdisciplinary Science Reviews

**The Amazing Journey of Reason** Mario Alemi, 2019-12-03 This Open Access book explores questions such as why and how did the first biological cells appear And then complex organisms brains societies and now connected human societies Physicists have good models for describing the evolution of the universe since the Big Bang but can we apply the same concepts to the evolution of aggregated matter living matter included The Amazing Journey analyzes the latest results in chemistry biology neuroscience anthropology and sociology under the light of the evolution of intelligence seen as the ability of processing information The main strength of this book is using just two concepts used in physics information and energy to explain The emergence and evolution of life procaryotes eukaryotes and complex organisms The emergence and evolution of the brain The emergence and evolution of societies human and not Possible evolution of our internet society and the role that Artificial Intelligence is playing

Rethinking the Knowledge Controversy in Organization Studies Walter R. Nord, Ann F. Connell, 2012-03-29 Recently the field of organization studies has been plagued by intense disruptive controversy about what counts as knowledge This book written by the major researchers and voices in the field of organization studies attempts to respond to this controversy by offering the topic of generative uncertainty as the primary vehicle for rethinking about this issue The authors prefer admitting uncertainty to making unwarranted assumptions The ideas about questioning the possibility of knowledge that is certain goes back to before the time of Socrates This unique historical look at the study of organization studies will be of interest to all students and scholars of this field

**Critiquing Sustainability, Changing Philosophy** Jenneth Parker, 2014-03-21 To increasing numbers of

people sustainability is the key challenge of the twenty first century In the many fields where it is a goal persistent problems obstruct the efforts of those trying to make a difference The task of this book is to provide an overview of the current state of philosophy in the context of what philosophy is could be or should be in relation to sustainability and the human future on Earth The book is conceived as a contribution to the UN Decade of Education for Sustainable Development helping to link work on philosophy and sustainability Critiquing Sustainability Changing Philosophy focusses on the importance of philosophical work to the formation and effectiveness of global civil society and social movements for sustainability in the context of the Anthropocene age of the Earth It takes a transdisciplinary systems approach that challenges philosophy and concludes by proposing a greatly enhanced role for philosophy in contributing to global public reason for sustainability This book will be of interest to philosophers sustainability practitioners and thinkers policy makers and all those engaged in the global movement for sustainability

**The New Walford Guide to Reference Resources** Ray Lester, 2005 The New Walford highlights the best resources to use when undertaking a search for accurate and relevant information saving you precious time and effort For those looking for a selective and evaluative reference resource that really delivers on its promise look no further In addition to print sources The New Walford naturally covers an extensive range of e reference sources such as digital databanks digital reference services electronic journal collections meta search engines networked information services open archives resource discovery services and websites of premier organizations in both the public and private sectors But rather than supplying a list of all available known resources as a web search engine might The New Walford subject specialists have carefully selected and evaluated available resources to provide a definitive list of the most appropriate and useful With an emphasis on quality and sustainability the subject specialists have been careful to assess the differing ways that information is framed and communicated in different subject areas As a result the resource evaluations in each subject area are prefaced by an introductory overview of the structure of the relevant literature This ensures that The New Walford is clear easy to use and intuitive Publisher

**Scientific Natural Philosophy** E. E. Escultura, 2011 Scientific Natural Philosophy explains the nature and content of scientific natural philosophy particularly qualitative modeling and updates scientific methodology by providing details of the mathematics involved The book presents a total view of our universe from the fractal superstring to its destiny as black holes back in to dark matter and to the timeless and boundless Universe where our universe is a local super super galaxy It stresses the

various levels of complementarity between qualitative and quantitative modeling where the former solves and answers questions the latter could not and duality between quantum and macro gravity It highlights new information from the Grand Unification Theory GUT missing in previous philosophical works such as the indestructible generalized nested fractal superstring brain waves as common medium of the brain and gene for their functions Moreover it points to a new technological epoch brought about by the GUT based on utilization of dark matter towards elevating the quality of life This comprehensive book provides an exciting perspective on this fascinating field to the reader **American Book Publishing Record** ,2003 **Rainbow of Computer Science** Cristian S. Calude,Grzegorz Rozenberg,Arto Salomaa,2011-03-22 This volume is dedicated to Hermann Maurer on his 70th birthday Topics include Automata Formal Languages and Computability to various aspects of the Practice of Computer Science as well as from Algorithmics to Learning **Mathematical Reasoning** Raymond Nickerson,2011-02-25 The development of mathematical competence both by humans as a species over millennia and by individuals over their lifetimes is a fascinating aspect of human cognition This book explores when and why the rudiments of mathematical capability first appeared among human beings what its fundamental concepts are and how and why it has grown into the richly branching complex of specialties that it is today It discusses whether the truths of mathematics are discoveries or inventions and what prompts the emergence of concepts that appear to be descriptive of nothing in human experience Also covered is the role of esthetics in mathematics What exactly are mathematicians seeing when they describe a mathematical entity as beautiful There is discussion of whether mathematical disability is distinguishable from a general cognitive deficit and whether the potential for mathematical reasoning is best developed through instruction This volume is unique in the vast range of psychological questions it covers as revealed in the work habits and products of numerous mathematicians It provides fascinating reading for researchers and students with an interest in cognition in general and mathematical cognition in particular Instructors of mathematics will also find the book s insights illuminating **Elements of Ethical Science** John Ogden,1891 *The Singular Universe and the Reality of Time* Roberto Mangabeira Unger, Lee Smolin,2015 Roberto Mangabeira Unger and Lee Smolin argue for a revolution in our cosmological ideas Ideal for non scientists physicists and cosmologists *Birth of Modern Facts* James W. Cortada,2023-01-09 For over twenty years James W Cortada has pioneered research into how information shapes society In this book he tells the story of how information evolved since the mid nineteenth century Cortada argues that information increased in quantity became more specialized by discipline e g mathematics science political science and more organized Information increased in volume due to a series of innovations such as the electrification of communications and the development of computers but also due to the organization of facts and knowledge by discipline making it easier to manage and access He looks at what major disciplines have done to shape the nature of modern information devoting chapters to the most obvious ones Cortada argues that understanding how some features of information evolved is useful for those who work

in subjects that deal with their very construct and application such as computer scientists and those exploring social media and most recently history The Birth of Modern Facts builds on Cortada's prior books examining how information became a central feature of modern society most notably as a sequel to All the Facts A History of Information in the United States since 1870 OUP 2016 and Building Blocks of Society History Information Ecosystems and Infrastructures R L 2021 Entropy of Complex Processes and Systems Eugene Barsky, 2020-07-21 Entropy of Complex Processes and Systems formalizes our understanding of many complex processes including the development of the methodology of analytical computation of complex processes as applied in many industries such as ore processing or more generally in areas of natural sciences The adequacy of the results of these calculations is confirmed by numerous experimental data obtained both on pilots and industrial facilities The book also provides a thorough analysis of the underlying physical foundations of entropy performed from new standpoints that are of interest to theoreticians studying contemporary expositions Provides methodologies for controlling and optimizing complex processes in branches of industry that involve transformation of materials or substances Describes entropy as the universal characteristic of a stochastic process independent of the system Introduces a new definition of entropy specifically related to dynamical phenomena The Blackwell Companion to Science and Christianity J. B. Stump, Alan G. Padgett, 2012-05-21 A cutting edge survey of contemporary thought at the intersection of science and Christianity Provides a cutting edge survey of the central ideas at play at the intersection of science and Christianity through 54 original articles by world leading scholars and rising stars in the discipline Focuses on Christianity's interaction with Science to offer a fine grained analysis of issues such as multiverse theories in cosmology convergence in evolution Intelligent Design natural theology human consciousness artificial intelligence free will miracles and the Trinity amongst many others Addresses major historical developments in the relationship between science and Christianity including Christian patristics the scientific revolution the reception of Darwin and twentieth century fundamentalism Divided into 9 Parts Historical Episodes Methodology Natural Theology Cosmology Evolution The Human Sciences Christian Bioethics Metaphysical Implications The Mind Theology and Significant Figures of the 20th Century Includes diverse perspectives and broadens the conversation from the Anglocentric tradition **Einstein, Polanyi, and the Laws of Nature** Lydia Jaeger, 2012-01-15 What is the relationship between religious belief and the study of nature between theology and science This is the fundamental preoccupation of the three different studies in Einstein Polanyi and the Laws of Nature By exploring the highly original yet little known thought of Michael Polanyi Jaeger highlights the inherent personal investment in any quest for knowledge including the scientific enterprise thus raising the question of the objectivity of human knowledge Considered to be the most incredible mind of the twentieth century Albert Einstein saw scientific research as the fruit of the cosmic religion His response to the question of the relationship between faith and science also receives the close analysis it deserves Finally Jaeger is interested in science's propensity to use the concept of laws of nature an idea also found in the

Bible She paves the way for interdisciplinary dialogue by examining the similarities and differences The synthesis of these three complementary studies brings out the collaboration between belief and knowledge thus establishing a bridge between two noble human activities faith and scientific research It will interest all serious followers of the ongoing science and religion dialogue

**Developing Language and Literacy in English across the Secondary School Curriculum** Urszula Clark, 2018-07-21 This book draws on original research and a language based pedagogy approach to examine how secondary schools in the UK can devise and implement coherent language and literacy across curriculum policies and strategies so that grammar and associated metalanguage becomes an integral part of their day to day curriculum practices The research was undertaken in three 11 to 18 secondary schools in England where the majority of students are categorised as having English as a second language EAL and where a significant minority are also socially disadvantaged in two of the three The author argues that paying explicit attention to the linguistic structures through which subject knowledge is realised can be of benefit to all pupils in ways that are also socially just and democratic This book provides an important bridge between academic theory and educational practice that will appeal to applied linguists and sociolinguists as well as to teachers teacher trainers and practitioners
