

Multi Criteria Decision Making

Bumho Son

College of Business Administration, CAU

Overview

- Study of problems with several criteria, i.e., **multiple criteria**, instead of a single objective when making a decision
- Three techniques discussed: **goal programming**, the **analytical hierarchy process** and **scoring models**
- **Goal programming**
 - Variation of linear programming considering more than one objective (goals) in the objective function
- **Analytical hierarchy process**
 - Develops a score for each decision alternative based on comparisons of each under different criteria reflecting the decision makers' preferences
- **Scoring models**
 - Based on a relatively simple weighted scoring technique

Modern Mathematics for the Engineer: First Series Edwin F. Beckenbach, 2013-09-03 This volume and its successor focus on material relevant to solving mathematical problems regularly confronted by engineers Volume One s three part treatment covers mathematical models probabilistic problems and computational considerations 1956 edition **Mathematical Introduction To Control Theory, A (Third Edition)** Shlomo Engelberg, 2024-04-29 The 3rd edition strikes a nice balance between mathematical rigor and engineering oriented applications helping students to understand the mathematical and engineering aspects of control theory The book makes effective use of the tools provided by MATLAB and includes material about using the tools provided by the Python programming language in the design and analysis of control systems without allowing the computer based tools to substitute for knowledge of control theory The examples in the text are carefully designed to develop the student s intuition in both mathematics and engineering With over 90 solved homework problems and about 200 figures this invaluable title will benefit junior and senior level university students in engineering An

Elementary Introduction to the Theory of Probability Boris Vladimirovich Gnedenko, Aleksandr I?Akovlevich Khinchin, 1962-01-01 This compact volume equips the reader with all the facts and principles essential to a fundamental understanding of the theory of probability It is an introduction no more throughout the book the authors discuss the theory of probability for situations having only a finite number of possibilities and the mathematics employed is held to the elementary level But within its purposely restricted range it is extremely thorough well organized and absolutely authoritative It is the only English translation of the latest revised Russian edition and it is the only current translation on the market that has been checked and approved by Gnedenko himself After explaining in simple terms the meaning of the concept of probability and the means by which an event is declared to be in practice impossible the authors take up the processes involved in the calculation of probabilities They survey the rules for addition and multiplication of probabilities the concept of conditional probability the formula for total probability Bayes s formula Bernoulli s scheme and theorem the concepts of random variables insufficiency of the mean value for the characterization of a random variable methods of measuring the variance of a random variable theorems on the standard deviation the Chebyshev inequality normal laws of distribution distribution curves properties of normal distribution curves and related topics The book is unique in that while there are several high school and college textbooks available on this subject there is no other popular treatment for the layman that contains quite the same material presented with the same degree of clarity and authenticity Anyone who desires a fundamental grasp of this increasingly important subject cannot do better than to start with this book New preface for Dover edition by B V Gnedenko

Dynamical Aspects in Fuzzy Decision Making Yuji Yoshida, 2013-06-05 The concept of fuzziness inspired by Zadeh 1965 brings us fruitful results when it is applied to problems in decision making Recently problems in fuzzy decision making are getting more complex and one of the most complex factors is dynamics in systems Dynamical approach to fuzzy decision making has been proposed by Bellman and Zadeh s celebrated paper Decision making in a fuzzy environment 1970 The idea has developed into fuzzy mathematical programming and has been applied in many fields including management science operations research control theory engineering systems analysis computer science mathematical finance etc Dynamic programming advocated in Bellmans book Dynamic programming 1957 is one of the most powerful tools to deal with dynamics in systems and Bellman and Zadeh has proposed the optimality principle in fuzzy decision making by 1970 introducing fuzzy dynamic programming Fuzzy dynamic programming and fuzzy mathematical programming has been making remarkable progress after they were given life by Bellman and Zadeh s paper 1970 In this volume various kinds of dynamics not only time but also structure of systems are considered This volume contains ten reviewed papers which deal with dynamics in theory and applications and whose topics are potentially related to dynamics and are expected to develop dynamical study in near future first fuzzy dynamic programming is reviewed from a viewpoint of its origin and consider its development in theory and applications
