Mathematics Of Organization:

Design Models for Hierarchical Organizations Richard M. Burton, Børge Obel, 2012-12-06 Design Models for Hierarchical Organizations Computation Information and Decentralization provides state of the art research on organizational design models and in particular on mathematical models Each chapter views the organization as an information processing entity Thus mathematical models are used to examine information flow and decision procedures which in turn form the basis for evaluating organization designs Each chapters stands alone as a contribution to organization design and the modeling approach to design Moreover the chapters fit together and that totality gives us a good understanding of where we are with this approach to organizational design issues and where we should focus our research efforts in the future Organization Structure: Cybernetic Systems Foundation Yasuhiko Takahara, Mihajlo Mesarovic, 2012-12-06 Organization Structure Cybernetic Systems Foundation utilizes a cybernetic systems framework for the study of organizations using GST General Systems Theory and presents a comprehensive formal view of organizations assessing regulation coordination and adaptation managements The use of GST in this book is in sharp contrast to previous attempts It addresses structural problems totally based on qualitative non numerical mathematics The book lays a framework for initial efforts to investigate the potential of using formal GST to address organizational dilemmas The text has been tested in several graduate courses It can serve as an excellent textbook or reference for graduate level research in this field as well as a reference for researchers in related fields

Math Education for America? Mark Wolfmeyer,2013-12-04 Math Education for America analyzes math education policy through the social network of individuals and private and public organizations that influence it in the United States The effort to standardize a national mathematics curriculum for public schools in the U S culminated in 2010 when over 40 states adopted the Common Core State Standards for Mathematics Rather than looking at the text of specific policy documents this book complements existing critical reviews of the national math education curriculum by employing a unique social network analysis Breaking new ground in detailing and theorizing the politics of math education Wolfmeyer argues that the private interests of this network are closely tied to a web of interrelated developments human capital education policy debates over traditional and reform pedagogy the assumed content knowledge deficit of math teachers and the proliferation of profit driven educational businesses By establishing the interconnectedness of these interests with the national math education curriculum he shows how the purported goals of math education reform are aligned with the prevailing political agendas of this social network rather than the national interest Bulletin ,1919 **Coal-mine**

In the mid 1980s the International Commission on Mathematical Instruction ICMI inaugurated a series of studies in mathematics education by commissioning one on the influence of technology and informatics on mathematics and its teaching These studies are designed to thoroughly explore topics of contemporary interest by gathering together a group of experts who prepare a Study Volume that provides a considered assessment of the current state and a guide to further developments Studies have embraced a range of issues some central such as the teaching of algebra some closely related such as the impact of history and psychology and some looking at mathematics education from a particular perspective such as cultural differences between East and West These studies have been commissioned at the rate of about one per year Once the ICMI Executive decides on the topic one or two chairs are selected and then in consultation with them an International Program Committee IPC of about 12 experts is formed The IPC then meets and prepares a Discussion Document that sets forth the issues and invites interested parties to submit papers These papers are the basis for invitations to a Study Conference at which the various dimensions of the topic are explored and a book the Study Volume is sketched out The book is then put together in collaboration mainly using electronic communication The entire process typically takes about six years
