Early Childhood Mathematics Skill Development in the Home Environment Belinda Blevins-Knabe, Ann M. Berghout Austin, 2016-10-17 This volume presents current research on the connections between the home and family environment on children's mathematics development. Focusing on infancy through first grade, it details the role of parents and other caregivers in promoting numeracy and the ways their active participation can prepare young children for learning about formal mathematics. Research data answer key questions regarding the development of numeracy alongside cognitive and linguistic skills, early acquisition of specific math skills, and numeracy of children with atypical language skills. The book also provides practical recommendations for parents and other caregivers as well as implications for future research studies and curriculum design. Included in the coverage: Ways to optimize home numeracy environments; Individual differences in numerical abilities; Cross-cultural comparisons and ways to scaffold young children's mathematical skills; Mathematics and language in the home environment; Center-based and family-based child care; Games and home numeracy practice. **Early Childhood Mathematics Skill Development in the Home Environment** is an essential resource for researchers, graduate students, and professionals in infancy and early childhood development, child and school psychology, early childhood education, social work, mathematics education, and educational psychology.

Katherine M. Robinson, Adam K. Dubé, Donna Kotsopoulos, 2023-05-31 This book focuses on elementary and middle school children's understanding of mathematics as well as the cognitive aspects involved in the development of mathematical knowledge, skills, and understanding. Children's success in and understanding of mathematics stem from factors beyond the mathematics curriculum. Researchers are increasingly becoming aware of the necessity to consider a complex set of variables when accounting for large individual differences in mathematics achievement. These chapters contribute to how both researchers and educators can consider the multidimensionality of skills involved in developing mathematical knowledge in the middle school years as well as to how this knowledge can be used to enhance practices in the mathematics classroom. Topics include the cognitive and spatial skills involved in mathematics knowledge; the role of motivation in mathematics learning; the neurological processes and development of children's mathematics skills; the development of understanding of arithmetic and fraction concepts; the factors relating to children's word problem success; and techniques to promote mathematics understanding. This book and its companion **Mathematical Teaching and Learning** take an interdisciplinary perspective to mathematical learning and development in the elementary and middle school years. The authors' and perspectives in this book draw from education, neuroscience, developmental psychology, and cognitive psychology. The book will be relevant to scholars, educators in the field of mathematics education, and also those in childhood development and cognition. Each chapter also includes practical tips and implications for parents as well as for educators and researchers.
