

different ways to understand how to solve problems about time.

Sadie spends $1\frac{1}{2}$ hours doing homework. She plays outside for 20 minutes and practices the piano for a quarter of an hour. How many more minutes does Sadie spend doing homework than practicing the piano and playing outside?

TRY IT Draw a bar model to solve time comparison problems.

Use the bar model to show the amount of time that Sadie spends doing homework, playing outside, and practicing the piano. Draw a bar from the end of those two bars to represent how much more time she spends doing homework. Show all the times in minutes.

Use the bar model to write an equation to solve the problem.

$$\text{homework minutes} = (\text{playing} + \text{practicing}) \text{ minutes} + \text{how many more homework minutes}$$

How many minutes does Sadie spend on homework, playing outside, and practicing the piano? How much more time does Sadie spend on homework, h , is unknown.

$$90 = 20 + 15 + h$$

CONNECT IT

Now you will use the problem from the previous page to help you understand how to solve problems about time by converting units of time and using equations. Use the Math Reference Sheet as necessary.

- Look at the bar model in the first Model It. Why do you think the amount of time Sadie does her homework and practices piano changed to a number of minutes?
- How much time does Sadie spend doing homework?
- How much time does Sadie spend playing outside and practicing the piano?
- Write and solve another equation to model the situation. Use the time Sadie spends doing homework and the total time Sadie spends practicing the piano and playing outside that you found in problems 2 and 3.
- Look back at the equation at the bottom of the previous page. How is that equation similar to or different from the equation you wrote in problem 4?

REFLECT

Look back at your Try It, strategies by classmates, and Model Its. Which models or strategies do you like best for solving multi-step problems about time? Explain.

Designing, Conducting, and Publishing Quality Research in Mathematics Education Keith R. Leatham, 2019-09-12 The purpose of this book is to collect organize and disseminate collective wisdom with respect to designing conducting and publishing quality research in mathematics education This wisdom will be gleaned from among those who over the past several decades have been instrumental in guiding the field in the pursuit of excellence in mathematics education research insightful editors educative reviewers prolific writers and caring mentors Each chapter is written to the novice researcher with the intent of aiding them in avoiding common pitfalls navigating difficult intellectual terrain and understanding that they are not alone in experiencing rejection frustration confusion and doubt This book differs from existing literature in the sense that it is written about the enterprise of designing conducting and publishing research in mathematics education as opposed to being reports of the results of such work It also differs in the sense that it is written with the intent to mentor the rising generation as opposed to capture the state of the field as would happen in a handbook for example It is written for the express purpose of helping the field work collectively to aid in the often isolated enterprise of mentoring new researchers The primary audience is a potentially wide one graduate students novice researchers graduate faculty advisors and mentors or anyone seeking to improve their own abilities to design conduct and publish quality research in mathematics education

Modern Mathematics Dirk De Bock, 2023-03-08 The international New Math developments between about 1950 through 1980 are regarded by many mathematics educators and education historians as the most historically important development in curricula of the twentieth century It attracted the attention of local and international politicians of teachers

and of parents and influenced the teaching and learning of mathematics at all levels kindergarten to college graduate in many nations After garnering much initial support it began to attract criticism But as Bill Jacob and the late Jerry Becker show in Chapter 17 some of the effects became entrenched This volume edited by Professor Dirk De Bock of Belgium provides an outstanding overview of the New Math modern mathematics movement Chapter authors provide exceptionally high quality analyses of the rise of the movement and of subsequent developments within a range of nations The first few chapters show how the initial leadership came from mathematicians in European nations and in the United States of America The background leaders in Europe were Caleb Gattegno and members of a mysterious group of mainly French pure mathematicians who since the 1930s had published under the name of a fictitious Nicolas Bourbaki In the United States there emerged during the 1950s various attempts to improve U S mathematics curricula and teaching especially in secondary schools and colleges This side of the story climaxed in 1957 when the Soviet Union succeeded in launching Sputnik the first satellite Undoubtedly this is a landmark publication in education The foreword was written by Professor Bob Moon one of a few other scholars to have written on the New Math from an international perspective The final epilogue chapter by Professor Geert Vanpaemel a historian draws together the overall thrust of the volume and makes links with the general history of curriculum development especially in science education including recent globalization trends Research in Education ,1971 Handbook of International Research in Mathematics Education Lyn D. English,2002-03 This state of the art Handbook brings together important mathematics education research that makes a difference in both theory and practice research that anticipates problems and needed knowledge before they become impediments to progress interprets future oriented problems into researchable issues presents the implications of research and theory development in forms that are useful to practitioners and policymakers and facilitates the development of research communities to focus on neglected priorities or strategic opportunities The volume represents a genuine attempt by contributors from around the world to advance the discipline rather than simply review what has been done and what exists The Handbook was developed in response to a number of major global catalysts for change including the impact of national and international mathematics comparative assessment studies the social cultural economic and political influences on mathematics education and research the influence of progressively sophisticated and available technology and the increasing globalization of mathematics education and research From these catalysts have emerged specific priority themes and issues for mathematics education research in the 21st century Three key themes were identified for attention in this volume life long democratic access to powerful mathematical ideas advances in research methodologies and influences of advanced technologies Each of these themes is examined in terms of learners teachers and learning contexts with theory development as an important component of all these aspects Dynamic and forward looking the Handbook of International Research in Mathematics Education is distinguished by its focus on new and emerging theoretical models perspectives and research methodologies its uniformly

high standard of scholarship and its emphasis on the international nature of mathematics education research It is an essential volume for all researchers professionals and students interested in mathematics education research in particular and more generally in international developments and future directions in the broad field of educational research

Theories of Mathematics Education Bharath Sriraman,Lyn English,2009-10-13 Advances in Mathematics Education is a new and innovative book series published by Springer that builds on the success and the rich history of ZDM The International Journal on Mathematics Education formerly known as Zentralblatt für Mathematik One characteristic of ZDM since its inception in 1969 has been the publication of themed issues that aim to bring the state of the art on central sub domains within mathematics education The published issues include a rich variety of topics and contributions that continue to be of relevance today The newly established monograph series aims to integrate synthesize and extend papers from previously published themed issues of importance today by orienting these issues towards the future state of the art The main idea is to move the field forward with a book series that looks to the future by building on the past by carefully choosing viable ideas that can fruitfully mutate and inspire the next generations Taking inspiration from Henri Poincaré 1854-1912 who said To create consists precisely in not making useless combinations and in making those which are useful and which are only a small minority *Proof and Proving in Mathematics Education* Gila Hanna,Michael de Villiers,2012-06-14 THIS BOOK IS AVAILABLE AS OPEN ACCESS BOOK ON SPRINGERLINK One of the most significant tasks facing mathematics educators is to understand the role of mathematical reasoning and proving in mathematics teaching so that its presence in instruction can be enhanced This challenge has been given even greater importance by the assignment to proof of a more prominent place in the mathematics curriculum at all levels Along with this renewed emphasis there has been an upsurge in research on the teaching and learning of proof at all grade levels leading to a re-examination of the role of proof in the curriculum and of its relation to other forms of explanation illustration and justification This book resulting from the 19th ICMI Study brings together a variety of viewpoints on issues such as The potential role of reasoning and proof in deepening mathematical understanding in the classroom as it does in mathematical practice The developmental nature of mathematical reasoning and

proof in teaching and learning from the earliest grades The development of suitable curriculum materials and teacher education programs to support the teaching of proof and proving The book considers proof and proving as complex but foundational in mathematics Through the systematic examination of recent research this volume offers new ideas aimed at enhancing the place of proof and proving in our classrooms

The Changing Role of Schools in Asian Societies John Chi-Kin Lee, 2007-12-05 Walk into a classroom in Tokyo New York London or Rotterdam and the similarities in structure activity purpose and style will outweigh differences in language dress and ethnic characteristics Learning is regulated and rationed teaching is a process or one way transmission of knowledge students need to be docile and conformist assessment needs to sift and sort the bright from the not so bright and rewards will be given to those who successfully negotiate this regime But are these the kinds of places that can meet the needs of the net generation The Changing Role of Schools in Asian Societies is concerned with the debate about the nature of modern schooling in Asia Traditionally schools are historical constructions reflecting the social economic and political needs of the societies that invest in them As Asia faces the challenges posed by the knowledge economy its schools have taken on a new and quite different importance This informative book outlines the broad policy contexts in which these transformations are taking place and the practical strategies that are needed to meet this objective The authors argue that the future of Asian societies depends on a transformation that requires a fundamental restructuring of schools as we know them while maintaining their long held cultural values This valuable insight provides an overview of educational issues in Asian societies establishes a broad theoretical framework in which these issues can be understood contextualizes issues by providing country case studies acknowledges the important role of culture influencing educational priorities It should be of interest to all those working in education policy and comparative education
