String Figures as Mathematics? Eric Vandendriessche, 2015-01-02 This book addresses the mathematical rationality contained in the making of string figures It does so by using interdisciplinary methods borrowed from anthropology mathematics history and philosophy of mathematics The practice of string figure making has long been carried out in many societies and particularly in those of oral tradition It consists in applying a succession of operations to a string knotted into a loop mostly using the fingers and sometimes the feet the wrists or the mouth This succession of operations is intended to generate a final figure The book explores different modes

of conceptualization of the practice of string figure making and analyses various source material through these conceptual tools it looks at research by mathematicians as well as ethnographical publications and personal fieldwork findings in the Chaco Paraguay and in the Trobriand Islands Papua New Guinea which all give evidence of the rationality that underlies this activity It concludes that the creation of string figures may be seen as the result of intellectual processes involving the elaboration of algorithms and concepts such as operation sub procedure iteration and transformation
